POLY PMNA · DIPLOMA CURRICULUM REV2026

Course 5007 | Semester 5 | Internship | Shared handbook

Summer Internship

Prepare for a supervised summer internship through placement planning, workplace conduct, learning goals, evidence collection, supervision and reflective reporting.

Course code	**5007**
Revision	**REV2026**
Semester	**Semester 5**
Type	**Internship**
Catalogue scope	**42 catalogue programme assignments**

COURSE ORIENTATION

How to use this handbook

This page is a structured learning aid for the shared catalogue record. Study the concept, complete the applied activity, retain the evidence, and compare the result with the latest approved programme instructions. Where the official syllabus differs, the official record takes precedence.

Source and verification note: The course identity, code, semester and subject type are taken from the tracked POLY PMNA REV2026 catalogue, which indexes the official SITTTR scheme. The official course-content reference is SITTTR course 5007; the scheme index is SITTTR REV2026 diploma syllabus. The direct subject-content page was not machine-readable or returned an unavailable-file response during preparation, so module headings and explanatory teaching material on this page are an original study-handbook structure, not claimed verbatim SITTTR wording. Confirm current hours, marks, credits, outcomes and assessment against the latest official programme record before examination use.

Learning outcomes

- Explain the central concepts and vocabulary of the subject using clear technical language.
- Plan and carry out supervised workplace learning with appropriate conduct, safety and communication.
- Create an internship evidence record, supervisor review, final report and reflective presentation.
- Identify assumptions, limitations and common errors, then improve the work using feedback.

Shared-record context

This code is assigned to 42 catalogue programme assignments in the tracked catalogue. The page therefore focuses on common learning practice and avoids claiming programme-specific technical details that were not verified.

Study rule: Do not treat the author-created examples as official examination questions or official mark distribution.

STUDY MAP

Modules and evidence

Author-created study map; verify official hours and marks			
Module	**Heading**	**Purpose**	**Evidence to retain**
1	Purpose, eligibility and preparation	Understand the internship as a structured learning experience rather than an informal placement.	Write a learning agreement containing role, goals, supervisor, dates, expected evidence and escalation route.
2	Workplace induction and planning	Enter the workplace prepared to learn, communicate and work safely within an organisation.	Create a first-week plan with tasks, questions, evidence and a daily reflection prompt.
3	Learning through supervised work	Convert assigned work into observable skill development and documented progress.	Map three workplace tasks to technical knowledge, practical skill and professional behaviour.
4	Supervision and problem solving	Use supervision responsibly when work is uncertain, delayed, unsafe or outside the approved scope.	Prepare a progress-review agenda and an issue note for one realistic workplace problem.
5	Report, presentation and reflection	Demonstrate what was learned without disclosing protected information or overstating contribution.	Draft a report outline and a reflection that distinguishes observation, contribution and future improvement.

MODULE 1

Purpose, eligibility and preparation

Purpose-led study **Apply + reflect**

Understand the internship as a structured learning experience rather than an informal placement.

Core topics−

- Learning goals and programme relevance
- Eligibility and institutional approval
- Placement choices and role description
- Safety, ethics, confidentiality and conduct

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Write a learning agreement containing role, goals, supervisor, dates, expected evidence and escalation route.

Evidence: Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.
3. Identify one likely failure and describe the evidence that would diagnose it.

MODULE 2

Workplace induction and planning

Purpose-led study | Apply + reflect

Enter the workplace prepared to learn, communicate and work safely within an organisation.

Core topics−

- Induction, policies and reporting lines
- Work plan and weekly milestones
- Tools, access, data protection and safety

- Professional communication and punctuality

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Create a first-week plan with tasks, questions, evidence and a daily reflection prompt.

Evidence: Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.
3. Identify one likely failure and describe the evidence that would diagnose it.

MODULE 3

Learning through supervised work

Purpose-led study | Apply + reflect

Convert assigned work into observable skill development and documented progress.

Core topics−

- Observation, shadowing and guided practice
- Task logs and evidence capture
- Feedback and correction
- Connecting workplace tasks to diploma outcomes

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Map three workplace tasks to technical knowledge, practical skill and professional behaviour.

Evidence: Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.

3. Identify one likely failure and describe the evidence that would diagnose it.

MODULE 4

Supervision and problem solving

Purpose-led study | Apply + reflect

Use supervision responsibly when work is uncertain, delayed, unsafe or outside the approved scope.

Core topics−

- Supervisor meetings and progress reviews
- Issue escalation and change control
- Teamwork and stakeholder communication
- Confidentiality and safe documentation

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Prepare a progress-review agenda and an issue note for one realistic workplace problem.

Evidence: Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.
3. Identify one likely failure and describe the evidence that would diagnose it.

MODULE 5

Report, presentation and reflection

Purpose-led study

Apply + reflect

Demonstrate what was learned without disclosing protected information or overstating contribution.

Core topics−

- Final report structure
- Evidence, diagrams and anonymisation
- Supervisor feedback and attendance
- Presentation, reflection and next-step plan

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Draft a report outline and a reflection that distinguishes observation, contribution and future improvement.

Evidence: Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.
3. Identify one likely failure and describe the evidence that would diagnose it.

ASSESSMENT PREPARATION

Evidence, revision and quality gates

Before submission or examination

1. Confirm the current SITTTR/SBTE title, hours, credits, outcomes and assessment.
2. Define the problem or prompt and state assumptions.
3. Show the method, calculation, algorithm, project record or communication structure.
4. Attach test, source, supervisor, workplace or reflection evidence as applicable.
5. Review clarity, safety, ethics, citations, originality and accessibility.

Revision checklist

- Can I define the main terms without copying?
- Can I apply the method to a new situation?

- Can I explain one common error and its correction?
- Can I show evidence for each claimed outcome?
- Can I state the limitations and the next improvement?

SELF-CHECK AND EXAMINATION PRACTICE

Question bank

Recall question

Define two important terms from Summer Internship and distinguish them.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Explain question

Explain why the method in this handbook matters for a diploma student.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Apply question

Apply one module method to a realistic technical, project or workplace situation.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Evaluate question

Identify a weak approach, state the evidence needed, and propose a defensible improvement.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Create question

Design a small artefact, plan, test, report section or presentation that demonstrates the subject outcomes.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Glossary

Terms used in this handbook

Term	Working meaning
Outcome	A capability the learner should demonstrate, not just a topic read.
Evidence	A record, artefact, result, source, test or review that supports a claim.
Acceptance criterion	A condition used to decide whether a requirement or deliverable is satisfactory.
Reflection	A brief evidence-based account of what worked, what did not and what should change.

Prepared as a POLY PMNA study handbook. Always follow the latest official SITTTR/SBTE instructions for the programme and examination session.
