POLY PMNA · DIPLOMA CURRICULUM REV2026

Course 4002 | Semester 4 | Lab | Shared handbook

Career Readiness and Communication

Develop professional identity, written and oral communication, teamwork, interview readiness, workplace conduct and evidence-based employability practice.

Course code	**4002**
Revision	**REV2026**
Semester	**Semester 4**
Type	**Lab**
Catalogue scope	**42 catalogue programme assignments**

COURSE ORIENTATION

How to use this handbook

This page is a structured learning aid for the shared catalogue record. Study the concept, complete the applied activity, retain the evidence, and compare the result with the latest approved programme instructions. Where the official syllabus differs, the official record takes precedence.

Source and verification note: The course identity, code, semester and subject type are taken from the tracked POLY PMNA REV2026 catalogue, which indexes the official SITTTR scheme. The official course-content reference is SITTTR course 4002; the scheme index is SITTTR REV2026 diploma syllabus. The direct subject-content page was not machine-readable or returned an unavailable-file response during preparation, so module headings and explanatory teaching material on this page are an original study-handbook structure, not claimed verbatim SITTTR wording. Confirm current hours, marks, credits, outcomes and assessment against the latest official programme record before examination use.

Learning outcomes

- Explain the central concepts and vocabulary of the subject using clear technical language.
- Use a digital, communication or employability practice in a realistic diploma and workplace context.
- Create a professional portfolio artefact that demonstrates the claimed skill.
- Identify assumptions, limitations and common errors, then improve the work using feedback.

Shared-record context

This code is assigned to 42 catalogue programme assignments in the tracked catalogue. The page therefore focuses on common learning practice and avoids claiming programme-specific technical details that were not verified.

Study rule: Do not treat the author-created examples as official examination questions or official mark distribution.

STUDY MAP

Modules and evidence

Author-created study map; verify official hours and marks			
Module	**Heading**	**Purpose**	**Evidence to retain**
1	Professional identity and workplace expectations	Translate technical education into dependable workplace behaviour and a credible professional identity.	Draft a professional introduction that connects one technical skill to one workplace outcome.
2	Written and technical communication	Write clear messages and documents for real workplace readers.	Convert a long technical explanation into a concise email, a memo and a short report paragraph.
3	Oral communication and presentation	Explain an idea, process or result clearly while listening and responding professionally.	Deliver a three-minute technical explanation supported by one labelled visual.
4	Teamwork and workplace collaboration	Contribute to teams through roles, meetings, documentation, conflict handling and shared accountability.	Run a short meeting, produce minutes and record two follow-up actions with owners.
5	Career preparation and professional evidence	Prepare for placement, internship and entry-level selection using honest, relevant evidence.	Build a one-page CV evidence map linking each claim to a project, lab, certificate or demonstration.

MODULE 1

Professional identity and workplace expectations

Purpose-led study **Apply + reflect**

Translate technical education into dependable workplace behaviour and a credible professional identity.

Core topics–

- Punctuality, reliability and ownership
- Ethics, respect and confidentiality
- Growth mindset and feedback
- Technical profile and employability evidence

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Draft a professional introduction that connects one technical skill to one workplace outcome.

Evidence: Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.
3. Identify one likely failure and describe the evidence that would diagnose it.

MODULE 2

Written and technical communication

Purpose-led study | Apply + reflect

Write clear messages and documents for real workplace readers.

Core topics−

- Email, memo, report and short proposal structure
- Tone, grammar and technical vocabulary
- Process descriptions, results and limitations

- Citations, tables and concise editing

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Convert a long technical explanation into a concise email, a memo and a short report paragraph.

Evidence: Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.
3. Identify one likely failure and describe the evidence that would diagnose it.

MODULE 3

Oral communication and presentation

Purpose-led study | Apply + reflect

Explain an idea, process or result clearly while listening and responding professionally.

Core topics−

- Listening and questioning
- Presentation structure and visual support
- Professional introductions and explanations
- Feedback, disagreement and clarification

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Deliver a three-minute technical explanation supported by one labelled visual.

> **Evidence:** Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.
3. Identify one likely failure and describe the evidence that would diagnose it.

MODULE 4

Teamwork and workplace collaboration

Purpose-led study **Apply + reflect**

Contribute to teams through roles, meetings, documentation, conflict handling and shared accountability.

Core topics−

- Roles, agendas and minutes
- Task coordination and handovers
- Constructive feedback and conflict response
- Digital collaboration and version history

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Run a short meeting, produce minutes and record two follow-up actions with owners.

Evidence: Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.
3. Identify one likely failure and describe the evidence that would diagnose it.

MODULE 5

Career preparation and professional evidence

Purpose-led study **Apply + reflect**

Prepare for placement, internship and entry-level selection using honest, relevant evidence.

Core topics−

- CV and portfolio structure
- Interview questions and STAR responses
- Workplace safety and professional conduct
- Reflection and continuous development plan

Study method

Read the concept, connect it to a diploma-level situation, make a labelled record or diagram, and check the result against the stated outcome. Keep programme-specific technical decisions within the approved project, laboratory or workplace context.

Applied activity

Build a one-page CV evidence map linking each claim to a project, lab, certificate or demonstration.

Evidence: Keep the completed activity, a short reflection and any source or test record in your course folder.

Common mistakes and corrections−

- Starting with implementation before defining the problem, inputs, outputs or acceptance criteria.
- Making a claim without a source, measurement, test or documented observation.
- Using a template mechanically instead of adapting it to the approved programme context.

Correction: state the assumption, choose evidence, perform the check, and record the decision.

Self-check−

1. Explain the main idea of this module in your own words.
2. Apply it to a small technical or workplace scenario.
3. Identify one likely failure and describe the evidence that would diagnose it.

ASSESSMENT PREPARATION

Evidence, revision and quality gates

Before submission or examination

1. Confirm the current SITTTR/SBTE title, hours, credits, outcomes and assessment.
2. Define the problem or prompt and state assumptions.
3. Show the method, calculation, algorithm, project record or communication structure.
4. Attach test, source, supervisor, workplace or reflection evidence as applicable.
5. Review clarity, safety, ethics, citations, originality and accessibility.

Revision checklist

- Can I define the main terms without copying?
- Can I apply the method to a new situation?
- Can I explain one common error and its correction?
- Can I show evidence for each claimed outcome?
- Can I state the limitations and the next improvement?

SELF-CHECK AND EXAMINATION PRACTICE

Question bank

Recall question

Define two important terms from Career Readiness and Communication and distinguish them.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Explain question

Explain why the method in this handbook matters for a diploma student.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Apply question

Apply one module method to a realistic technical, project or workplace situation.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Evaluate question

Identify a weak approach, state the evidence needed, and propose a defensible improvement.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Create question

Design a small artefact, plan, test, report section or presentation that demonstrates the subject outcomes.
Answer guidance: define the terms, state assumptions, show the method, use a specific example, and cite or retain evidence where appropriate.

Glossary

Terms used in this handbook

Term	Working meaning
Outcome	A capability the learner should demonstrate, not just a topic read.
Evidence	A record, artefact, result, source, test or review that supports a claim.
Acceptance criterion	A condition used to decide whether a requirement or deliverable is satisfactory.
Reflection	A brief evidence-based account of what worked, what did not and what should change.

Prepared as a POLY PMNA study handbook. Always follow the latest official SITTTR/SBTE instructions for the programme and examination session.
