Module hours listed: 58

Official Source Declaration

This lesson uses the supplied official syllabus PDF as the authoritative source for course information, revision, modules, topics, objectives, Course Outcomes, assessment information, official activities, practical requirements, and references.

Source handling: Official wording and numerical values are retained wherever supplied. Educational explanations, Malayalam support, examples, diagrams, and revision questions are added as study support and are not presented as additional official requirements.

Transparency note: Official assessment information is reproduced below from the supplied syllabus. Any limitation in the supplied PDF is not silently corrected.

How to Study This Lesson

Recommended sequence

1. Begin with the official source declaration and course dashboard.
2. Study each module in the official order and keep the coverage table as a checklist.
3. Open every topic, understand the example or procedure, and write your own short answer.
4. Use the revision section, glossary, questions, and practice paper after completing the modules.

Study principle: Keep English technical terminology, symbols, units, and official assessment wording unchanged in examination answers. Use the Malayalam support blocks only as a bridge to understanding.

Handbook method: Do not treat a topic as completed after reading its heading. For every topic card, complete the learning objectives, follow the conceptual framework, write the worked answer method, and answer the self-check questions. This creates a study record that is useful for class learning and examination preparation.

4 (L:0,T:0,P:4); 60 periods

Module-hour and outcome mapping

No.	Module	Official hours	Relevant CO / level
1	Communication and interpersonal skills	15	CO1 · Applying

No.	Module	Official hours	Relevant CO / level
2	Information technology skills	14	CO2 · Applying
3	Business correspondence and documentation	20	CO3 · Applying
4	Company secretarial skills	9	CO4 · Applying

Prerequisites

- Communication Skills in English; Fundamentals of Business; Word Processing I and II; Financial Accounting I and II.

How to study this lesson

1. Read the module introduction and learning goals.
2. Open every topic and reproduce its example, sequence, or procedure.
3. Use Malayalam support as a bridge; retain English technical terms for examinations.
4. Attempt the module questions without looking at the answers.

Objectives, Course Outcomes and CO–PO Information

Official course objectives

1. To enable the students to create an efficient office environment by acquiring necessary communicative, secretarial, administrative and professional skills.

Course Outcomes

1. Apply communication and interpersonal skills.
2. Make use of Information Technology skills.
3. Develop business correspondence and documentation skills.
4. Apply company secretarial skills.

CO–PO mapping as supplied

CO–PO mapping is reproduced from the supplied syllabus header; 3 = strongly mapped, 2 = moderately mapped, 1 = weakly mapped, and a blank cell is not silently converted into a value.

Complete Syllabus Coverage

Official syllabus point-by-point coverage

This audit layer maps every official source block to the corresponding lesson module. The source transcript is retained verbatim as extracted from the supplied syllabus; the study guidance below is educational support and is not presented as additional official syllabus content. No official point is intentionally omitted.

Source-to-lesson coverage map

Module	Lesson topic cards	Source basis	Official point units
Module 1	3	Official Contents block	14
Module 2	3	Official Contents block	5
Module 3	3	Official Contents block	14
Module 4	3	Official Contents block	10

Use this checklist to confirm that every official module topic is represented in the lesson.

Complete official topic coverage checklist

Module	Topic code	Topic	Hours
module-1	M1.01	Communication process and workplace importance	5
module-1	M1.02	Core language and workplace skills	5
module-1	M1.03	Group discussion, writing and interpersonal skills	5
module-2	M2.01	Typing and PC skills	5
module-2	M2.02	Office suite and internet	5
module-2	M2.03	Netiquette, HTML and digital communication	4
module-3	M3.01	Office filing and correspondence	6
module-3	M3.02	Accounting and transaction documents	7
module-3	M3.03	Modern office and business management	7

Module	Topic code	Topic	Hours
module-4	M4.01	Company-formation documents	3
module-4	M4.02	Company correspondence and share records	3
module-4	M4.03	Meetings, minutes and reports	3

Learning Roadmap

1. Communication and interpersonal skills
CO1 · Applying · 15 hours

2. Information technology skills
CO2 · Applying · 14 hours

3. Business correspondence and documentation
CO3 · Applying · 20 hours

4. Company secretarial skills
CO4 · Applying · 9 hours

The roadmap follows the order of the supplied syllabus.

OFFICIAL MODULE 1

Communication and interpersonal skills

The official content includes communication meaning, importance, objectives, types, barriers and process; workplace communication; verbal/non-verbal skills; English in globalisation; LSRW; formal/informal listening; word-of-the-day; group discussion; newspaper, report and article writing; resume writing; telephone etiquette and interpersonal-skill strategies.

Hours: 15
CO1 · Applying · Bloom level: Applying

Handbook study routine: Complete Module 1 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words.

Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 1

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:
Communication Skills and Interpersonal Skills: Communication – Meaning - importance
– objectives – types - barriers and process -Importance of good communication skills at the workplace - Verbal and nonverbal communication skills - Globalization and the Need for
Communicating in English - Four core skills practicing- LSRW - Listening to Conversation
(Formal and Informal) -Word of the day practice - Group discussion – Behavior in a Group
Discussion – Essential Elements of Group Discussion – Group Discussion Etiquette-Newspaper reading, report writing, article writing - Resume writing - Telephone Etiquettes
-Ways to communicate effectively in the workplace - Identify various Interpersonal skills,
Strategies for developing interpersonal skills.

Point-by-point study guide

Official syllabus point 1: Communication Skills and Interpersonal Skills: Communication – Meaning - importance

Exact source point

> **Syllabus text:** Communication Skills and Interpersonal Skills: Communication – Meaning - importance

How to understand and study it

This point is an official syllabus requirement: “Communication Skills and Interpersonal Skills: Communication – Meaning - importance”. Begin with the exact definition or meaning, then identify the purpose, scope, and terminology contained in the point. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

> **Malayalam support:** □ syllabus point □□□□□□□□□□□□ Communication Skills, Interpersonal Skills, Communication – Meaning - importance □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

> **Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Communication Skills and Interpersonal Skills: Communication – Meaning - importance should be followed as a signal or information path. Explain what is generated, how it is modified or transmitted, what can disturb it, and how the receiver reconstructs or uses it.

Learning objectives

- Define and scope Communication Skills and Interpersonal Skills: Communication – Meaning - importance using the official terminology retained above.
- Organise the important elements of Communication Skills and Interpersonal Skills: Communication – Meaning - importance into a logical sequence, classification, structure, or calculation.
- Connect Communication Skills and Interpersonal Skills: Communication – Meaning - importance with one engineering decision, operation, measurement, or safety requirement in the context of Communication and interpersonal skills.
- Write an examination answer on Communication Skills and Interpersonal Skills: Communication – Meaning - importance with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Communication Skills and Interpersonal Skills: Communication – Meaning - importance. It is a study organisation method, not an additional official syllabus requirement.

- Define the information-bearing signal and the relevant source or channel.
- Describe the blocks or stages in order.
- Explain the role of bandwidth, noise, attenuation, distortion, coding, modulation, or protocol rules where applicable.
- Compare performance using range, capacity, reliability, complexity, cost, and application.

Engineering application lens

Engineering systems use Communication Skills and Interpersonal Skills: Communication – Meaning - importance when information must be transferred reliably between equipment, instruments, controllers, or users. The choice of method is a balance between signal quality, distance, data rate, interference, infrastructure, safety, and maintenance.

Worked answer method

Given: source, channel, receiver, signal condition, or communication requirement.
Required: block diagram, operating explanation, comparison, or fault analysis.
Method: trace the signal from source to destination and mark where conversion, loss, interference, or recovery occurs.
Answer: state the principle, blocks, performance factors, application, and limitation.

Exam answer blueprint

For a short-answer question on Communication Skills and Interpersonal Skills: Communication – Meaning - importance, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Communication Skills and Interpersonal Skills: Communication – Meaning - importance, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Communication Skills and Interpersonal Skills: Communication – Meaning - importance?
- How would you distinguish Communication Skills and Interpersonal Skills: Communication – Meaning - importance from a closely related idea?
- Where would an engineer or technician encounter Communication Skills and Interpersonal Skills: Communication – Meaning - importance, and what must be checked before using it?
- What common mistake would make an answer or operation involving Communication Skills and Interpersonal Skills: Communication – Meaning - importance incorrect?

Common mistakes and safety emphasis

- Using transmitter, channel, and receiver as labels without explaining their functions.
- Confusing bandwidth, data rate, frequency, and range.
- Ignoring noise, attenuation, interference, synchronization, or protocol compatibility.
- Comparing systems without using common criteria.

Malayalam support: Communication Skills and Interpersonal Skills: Communication – Meaning - importance [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

Official syllabus point 2: – objectives – types

Exact source point

Syllabus text: – objectives – types

How to understand and study it

This point is an official syllabus requirement: "– objectives – types". Prepare a classification table. For every named type, learn its defining feature, distinguishing point, and one appropriate engineering context. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Prepare a table with type, defining feature, advantage or limitation, and application.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: ▯ syllabus point ▯▯▯▯▯▯▯▯▯▯▯ – objectives – types ▯▯▯▯ technical terms English-▯▯▯▯▯▯▯ ▯▯▯▯▯▯▯. ▯▯▯▯▯ definition ▯▯▯▯▯▯▯▯▯ principle ▯▯▯▯▯▯▯▯▯▯▯▯; ▯▯▯▯ ▯▯▯ term-▯▯▯▯ function, difference, application ▯▯▯▯▯▯ ▯▯▯▯▯▯▯▯▯▯ ▯▯▯▯▯▯. Diagram, sequence, formula, unit ▯▯▯▯▯▯ ▯▯▯▯▯▯▯▯▯▯ ▯▯▯▯▯ ▯▯▯▯▯▯▯ revision ▯▯▯▯▯▯▯.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

– objectives – types is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope – objectives – types using the official terminology retained above.
- Organise the important elements of – objectives – types into a logical sequence, classification, structure, or calculation.
- Connect – objectives – types with one engineering decision, operation, measurement, or safety requirement in the context of Communication and interpersonal skills.
- Write an examination answer on – objectives – types with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading – objectives – types. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of – objectives – types is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on – objectives – types, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is – objectives – types, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining – objectives – types?
- How would you distinguish – objectives – types from a closely related idea?
- Where would an engineer or technician encounter – objectives – types, and what must be checked before using it?
- What common mistake would make an answer or operation involving – objectives – types incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: – objectives – types [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. Official syllabus point 3: barriers and process -Importance of good communication skills at the workplace

Exact source point

Syllabus text: barriers and process -Importance of good communication skills at the workplace

How to understand and study it

This point is an official syllabus requirement: “barriers and process -Importance of good communication skills at the workplace”. Study the sequence from input or initial condition to operation and final output. Note the role of each named stage and the cause-and-effect relationship. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Write the operating sequence in numbered steps, including the input, intermediate action, and output.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: ▯ syllabus point ▯▯▯▯▯▯▯▯▯▯▯▯ barriers, process -Importance of good communication skills at the workplace ▯▯▯▯ technical terms English-▯▯▯▯▯▯▯ ▯▯▯▯▯▯▯. ▯▯▯▯▯ definition ▯▯▯▯▯▯▯▯▯▯ principle ▯▯▯▯▯▯▯▯▯▯▯▯▯; ▯▯▯▯ ▯▯▯ term-▯▯▯▯ function, difference, application ▯▯▯▯▯▯ ▯▯▯▯▯▯▯▯▯▯ ▯▯▯▯▯▯. Official syllabus point 6: Communicating in English

Exact source point

Syllabus text: Communicating in English

How to understand and study it

This point is an official syllabus requirement: “Communicating in English”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□□ Communicating in English □□□□ technical terms English-□□□□□□□□ □□□□□□□□. □□□□□□ definition □□□□□□□□□□□ principle □□□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□□ □□□□□□□□□□□ □□□□□□□. Diagram, sequence, formula, unit □□□□□□□ □□□□□□□□□□□ □□□□□□ □□□□□□□□ revision □□□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Communicating in English is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Communicating in English using the official terminology retained above.
- Organise the important elements of Communicating in English into a logical sequence, classification, structure, or calculation.
- Connect Communicating in English with one engineering decision, operation, measurement, or safety requirement in the context of Communication and interpersonal skills.
- Write an examination answer on Communicating in English with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Communicating in English. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Communicating in English is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Communicating in English, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Communicating in English, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Communicating in English?
- How would you distinguish Communicating in English from a closely related idea?
- Where would an engineer or technician encounter Communicating in English, and what must be checked before using it?
- What common mistake would make an answer or operation involving Communicating in English incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: □ syllabus point □□□□□□□□□□□ Telephone Etiquettes □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Telephone Etiquettes is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Telephone Etiquettes using the official terminology retained above.
- Organise the important elements of Telephone Etiquettes into a logical sequence, classification, structure, or calculation.
- Connect Telephone Etiquettes with one engineering decision, operation, measurement, or safety requirement in the context of Communication and interpersonal skills.
- Write an examination answer on Telephone Etiquettes with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Telephone Etiquettes. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Telephone Etiquettes is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Telephone Etiquettes, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Telephone Etiquettes, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Telephone Etiquettes?
- How would you distinguish Telephone Etiquettes from a closely related idea?
- Where would an engineer or technician encounter Telephone Etiquettes, and what must be checked before using it?
- What common mistake would make an answer or operation involving Telephone Etiquettes incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

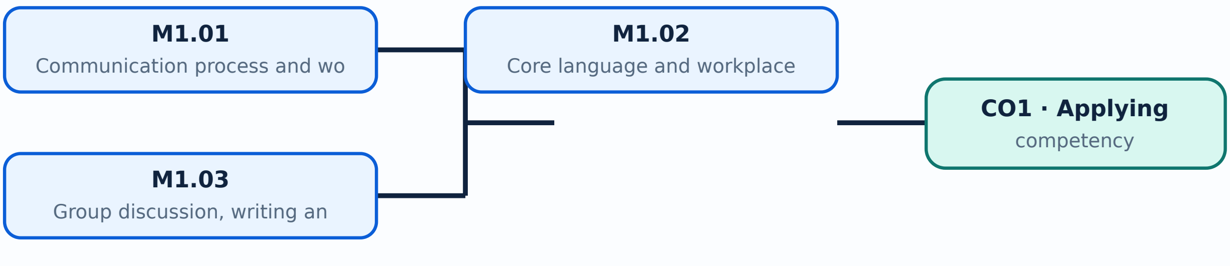
Learning goals

- Communicate appropriately in workplace situations.
- Practise LSRW and group-discussion skills.
- Prepare professional written and spoken communication.

Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.



Learning map for Module module-1: the listed topics build the module competency.

M1.01 — Communication process and workplace importance (5 hours)

Concept and explanation

Communication involves sender, message, channel, receiver, feedback and context. Barriers may be physical, semantic, psychological, organisational or technological; professional success depends on reducing them.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Identify communication elements.
- Classify barriers.
- Choose a suitable channel.

Handbook treatment

M1.01 — Communication process and workplace importance (5 hours) should be followed as a signal or information path. Explain what is generated, how it is modified or transmitted, what can disturb it, and how the receiver reconstructs or uses it.

Learning objectives

- Define and scope M1.01 — Communication process and workplace importance (5 hours) using the official terminology retained above.
- Organise the important elements of M1.01 — Communication process and workplace importance (5 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.01 — Communication process and workplace importance (5 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Communication and interpersonal skills.
- Write an examination answer on M1.01 — Communication process and workplace importance (5 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M1.01 — Communication process and workplace importance (5 hours). It is a study organisation method, not an additional official syllabus requirement.

- Define the information-bearing signal and the relevant source or channel.
- Describe the blocks or stages in order.
- Explain the role of bandwidth, noise, attenuation, distortion, coding, modulation, or protocol rules where applicable.
- Compare performance using range, capacity, reliability, complexity, cost, and application.

Engineering application lens

Engineering systems use M1.01 — Communication process and workplace importance (5 hours) when information must be transferred reliably between equipment, instruments, controllers, or users. The choice of method is a balance between signal quality, distance, data rate, interference, infrastructure, safety, and maintenance.

Worked answer method

Given: source, channel, receiver, signal condition, or communication requirement.
Required: block diagram, operating explanation, comparison, or fault analysis.
Method: trace the signal from source to destination and mark where conversion, loss, interference, or recovery occurs.
Answer: state the principle, blocks, performance factors, application, and limitation.

Exam answer blueprint

For a short-answer question on M1.01 — Communication process and workplace importance (5 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M1.01 — Communication process and workplace importance (5 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.01 — Communication process and workplace importance (5 hours)?
- How would you distinguish M1.01 — Communication process and workplace importance (5 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.01 — Communication process and workplace importance (5 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.01 — Communication process and workplace importance (5 hours) incorrect?

Common mistakes and safety emphasis

- Using transmitter, channel, and receiver as labels without explaining their functions.
- Confusing bandwidth, data rate, frequency, and range.
- Ignoring noise, attenuation, interference, synchronization, or protocol compatibility.
- Comparing systems without using common criteria.

Malayalam support: M1.01 — Communication process and workplace importance (5 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

M1.02 — Core language and workplace skills (5 hours)

Concept and explanation

Verbal, non-verbal, listening, speaking, reading and writing skills support workplace performance. Globalisation increases the need for clear English communication across roles and cultures.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Practise LSRW.
- Use tone and body language appropriately.
- Listen for meaning and action points.

Handbook treatment

M1.02 — Core language and workplace skills (5 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M1.02 — Core language and workplace skills (5 hours) using the official terminology retained above.
- Organise the important elements of M1.02 — Core language and workplace skills (5 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.02 — Core language and workplace skills (5 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Communication and interpersonal skills.
- Write an examination answer on M1.02 — Core language and workplace skills (5 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M1.02 — Core language and workplace skills (5 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M1.02 — Core language and workplace skills (5 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M1.02 — Core language and workplace skills (5 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M1.02 — Core language and workplace skills (5 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.02 — Core language and workplace skills (5 hours)?
- How would you distinguish M1.02 — Core language and workplace skills (5 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.02 — Core language and workplace skills (5 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.02 — Core language and workplace skills (5 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

M1.03 — Group discussion, writing and interpersonal skills (5 hours)

Concept and explanation

Group discussions require preparation, turn-taking, evidence, respectful disagreement and conclusion. Newspaper reading, reports, articles, resumes and telephone etiquette develop communication and employability.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Follow group-discussion etiquette.
- Structure a short report.
- Prepare a focused resume and telephone response.

Handbook treatment

M1.03 — Group discussion, writing and interpersonal skills (5 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M1.03 — Group discussion, writing and interpersonal skills (5 hours) using the official terminology retained above.
- Organise the important elements of M1.03 — Group discussion, writing and interpersonal skills (5 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.03 — Group discussion, writing and interpersonal skills (5 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Communication and interpersonal skills.
- Write an examination answer on M1.03 — Group discussion, writing and interpersonal skills (5 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M1.03 — Group discussion, writing and interpersonal skills (5 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M1.03 — Group discussion, writing and interpersonal skills (5 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M1.03 — Group discussion, writing and interpersonal skills (5 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M1.03 — Group discussion, writing and interpersonal skills (5 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.03 — Group discussion, writing and interpersonal skills (5 hours)?
- How would you distinguish M1.03 — Group discussion, writing and interpersonal skills (5 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.03 — Group discussion, writing and interpersonal skills (5 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.03 — Group discussion, writing and interpersonal skills (5 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

OFFICIAL MODULE 2

Information technology skills

The module covers PC and operating-system skills, Word, Excel and PowerPoint, communication/collaboration tools, email, intranet, video conferencing, digital calendars, file sharing, social-media management, netiquette and HTML tags for a simple web page.

Hours: 14
CO2 · Applying · Bloom level: Applying

Handbook study routine: Complete Module 2 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 2

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:
Informational Technology Skills: Operating systems knowledge-PC skills including Word,
Excel and PowerPoint (Office suites)-Communication and collaboration tools - Modes of electronic communications -Email Management -Intranet -Video Conferencing - Digital
Calendars (Google, Outlook)-File Sharing Programs (Google Drive) -Social Media Management–Netiquette – HTML tags – Use HTML tags for creating simple web page.

Point-by-point study guide

Official syllabus point 1: Informational Technology Skills: Operating systems knowledge-PC skills including Word

Exact source point

> **Syllabus text:** Informational Technology Skills: Operating systems knowledge-PC skills including Word

How to understand and study it

This point is an official syllabus requirement: “Informational Technology Skills: Operating systems knowledge-PC skills including Word”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

> **Malayalam support:** □ syllabus point □□□□□□□□□□□ Informational Technology Skills, Operating systems knowledge-PC skills including Word □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

> **Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Informational Technology Skills: Operating systems knowledge-PC skills including Word should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

Learning objectives

- Define and scope Informational Technology Skills: Operating systems knowledge-PC skills including Word using the official terminology retained above.
- Organise the important elements of Informational Technology Skills: Operating systems knowledge-PC skills including Word into a logical sequence, classification, structure, or calculation.
- Connect Informational Technology Skills: Operating systems knowledge-PC skills including Word with one engineering decision, operation, measurement, or safety requirement in the context of Information technology skills.
- Write an examination answer on Informational Technology Skills: Operating systems knowledge-PC skills including Word with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Informational Technology Skills: Operating systems knowledge-PC skills including Word. It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

Engineering application lens

For engineering practice, Informational Technology Skills: Operating systems knowledge-PC skills including Word matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

Worked answer method

Given: the input conditions, required output, and any stated constraints.
Required: the logic sequence, program structure, truth table, or operating result.
Method: break the problem into named states or steps; evaluate them in order; test at least one alternate condition.
Answer: show the final sequence and state the expected output for each important condition.

Exam answer blueprint

For a short-answer question on Informational Technology Skills: Operating systems knowledge-PC skills including Word, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Informational Technology Skills: Operating systems knowledge-PC skills including Word, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Informational Technology Skills: Operating systems knowledge-PC skills including Word?
- How would you distinguish Informational Technology Skills: Operating systems knowledge-PC skills including Word from a closely related idea?
- Where would an engineer or technician encounter Informational Technology Skills: Operating systems knowledge-PC skills including Word, and what must be checked before using it?
- What common mistake would make an answer or operation involving Informational Technology Skills: Operating systems knowledge-PC skills including Word incorrect?

Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

Malayalam support: Informational Technology Skills: Operating systems knowledge-PC skills including Word □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. Official syllabus point 2: Excel and PowerPoint (Office suites)-Communication and collaboration tools

Exact source point

Syllabus text: Excel and PowerPoint (Office suites)-Communication and collaboration tools

How to understand and study it

This point is an official syllabus requirement: “Excel and PowerPoint (Office suites)-Communication and collaboration tools”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ PowerPoint (Office suites)-Communication, collaboration tools □□□□ technical terms English-□□□□□□□□ □□□□□□□□. □□□□□□ definition □□□□□□□□□□□ principle □□□□□□□□□□□□□□; □□□□□ □□□□ term-□□□□ function, difference, application □□□□□□□ □□□□□□□□□□□ □□□□□□□. Diagram, sequence, formula, unit □□□□□□□ □□□□□□□□□□□ □□□□□□ □□□□□□□□ revision □□□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Excel and PowerPoint (Office suites)-Communication and collaboration tools must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope Excel and PowerPoint (Office suites)-Communication and collaboration tools using the official terminology retained above.
- Organise the important elements of Excel and PowerPoint (Office suites)-Communication and collaboration tools into a logical sequence, classification, structure, or calculation.
- Connect Excel and PowerPoint (Office suites)-Communication and collaboration tools with one engineering decision, operation, measurement, or safety requirement in the context of Information technology skills.
- Write an examination answer on Excel and PowerPoint (Office suites)-Communication and collaboration tools with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Excel and PowerPoint (Office suites)-Communication and collaboration tools. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, Excel and PowerPoint (Office suites)-Communication and collaboration tools is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on Excel and PowerPoint (Office suites)-Communication and collaboration tools, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Excel and PowerPoint (Office suites)-Communication and collaboration tools, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Excel and PowerPoint (Office suites)-Communication and collaboration tools?
- How would you distinguish Excel and PowerPoint (Office suites)-Communication and collaboration tools from a closely related idea?
- Where would an engineer or technician encounter Excel and PowerPoint (Office suites)-Communication and collaboration tools, and what must be checked before using it?
- What common mistake would make an answer or operation involving Excel and PowerPoint (Office suites)-Communication and collaboration tools incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Modes of electronic communications -Email Management -Intranet -Video Conferencing should be followed as a signal or information path. Explain what is generated, how it is modified or transmitted, what can disturb it, and how the receiver reconstructs or uses it.

Learning objectives

- Define and scope Modes of electronic communications -Email Management -Intranet -Video Conferencing using the official terminology retained above.
- Organise the important elements of Modes of electronic communications -Email Management -Intranet -Video Conferencing into a logical sequence, classification, structure, or calculation.
- Connect Modes of electronic communications -Email Management -Intranet -Video Conferencing with one engineering decision, operation, measurement, or safety requirement in the context of Information technology skills.
- Write an examination answer on Modes of electronic communications -Email Management -Intranet -Video Conferencing with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Modes of electronic communications -Email Management -Intranet -Video Conferencing. It is a study organisation method, not an additional official syllabus requirement.

- Define the information-bearing signal and the relevant source or channel.
- Describe the blocks or stages in order.
- Explain the role of bandwidth, noise, attenuation, distortion, coding, modulation, or protocol rules where applicable.
- Compare performance using range, capacity, reliability, complexity, cost, and application.

Engineering application lens

Engineering systems use Modes of electronic communications -Email Management -Intranet -Video Conferencing when information must be transferred reliably between equipment, instruments, controllers, or users. The choice of method is a balance between signal quality, distance, data rate, interference, infrastructure, safety, and maintenance.

Worked answer method

Given: source, channel, receiver, signal condition, or communication requirement.
Required: block diagram, operating explanation, comparison, or fault analysis.
Method: trace the signal from source to destination and mark where conversion, loss, interference, or recovery occurs.
Answer: state the principle, blocks, performance factors, application, and limitation.

Exam answer blueprint

For a short-answer question on Modes of electronic communications -Email Management -Intranet -Video Conferencing, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Modes of electronic communications -Email Management -Intranet -Video Conferencing, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Modes of electronic communications -Email Management -Intranet -Video Conferencing?
- How would you distinguish Modes of electronic communications -Email Management -Intranet -Video Conferencing from a closely related idea?
- Where would an engineer or technician encounter Modes of electronic communications -Email Management -Intranet -Video Conferencing, and what must be checked before using it?
- What common mistake would make an answer or operation involving Modes of electronic communications -Email Management -Intranet -Video Conferencing incorrect?

Common mistakes and safety emphasis

- Using transmitter, channel, and receiver as labels without explaining their functions.
- Confusing bandwidth, data rate, frequency, and range.
- Ignoring noise, attenuation, interference, synchronization, or protocol compatibility.
- Comparing systems without using common criteria.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Calendars (Google, Outlook)-File Sharing Programs (Google Drive) -Social Media should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

Learning objectives

- Define and scope Calendars (Google, Outlook)-File Sharing Programs (Google Drive) -Social Media using the official terminology retained above.
- Organise the important elements of Calendars (Google, Outlook)-File Sharing Programs (Google Drive) -Social Media into a logical sequence, classification, structure, or calculation.
- Connect Calendars (Google, Outlook)-File Sharing Programs (Google Drive) -Social Media with one engineering decision, operation, measurement, or safety requirement in the context of Information technology skills.
- Write an examination answer on Calendars (Google, Outlook)-File Sharing Programs (Google Drive) -Social Media with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Calendars (Google, Outlook)-File Sharing Programs (Google Drive) -Social Media. It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

Engineering application lens

For engineering practice, Calendars (Google, Outlook)-File Sharing Programs (Google Drive) -Social Media matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

Worked answer method

Given: the input conditions, required output, and any stated constraints.
Required: the logic sequence, program structure, truth table, or operating result.
Method: break the problem into named states or steps; evaluate them in order; test at least one alternate condition.
Answer: show the final sequence and state the expected output for each important condition.

Exam answer blueprint

> **Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Management–Netiquette – HTML tags – Use HTML tags for creating simple web page. is a decision and coordination topic. Learn the definitions, then connect the planning inputs, method, output, performance measure, and corrective action.

Learning objectives

- Define and scope Management–Netiquette – HTML tags – Use HTML tags for creating simple web page. using the official terminology retained above.
- Organise the important elements of Management–Netiquette – HTML tags – Use HTML tags for creating simple web page. into a logical sequence, classification, structure, or calculation.
- Connect Management–Netiquette – HTML tags – Use HTML tags for creating simple web page. with one engineering decision, operation, measurement, or safety requirement in the context of Information technology skills.
- Write an examination answer on Management–Netiquette – HTML tags – Use HTML tags for creating simple web page. with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Management–Netiquette – HTML tags – Use HTML tags for creating simple web page.. It is a study organisation method, not an additional official syllabus requirement.

- Define the management term or objective.
- Identify the resources, constraints, people, information, and time involved.
- Describe the procedure or decision criteria in a logical sequence.
- Measure the result and state how deviations are controlled or improved.

Engineering application lens

Engineering organisations apply Management–Netiquette – HTML tags – Use HTML tags for creating simple web page. to deliver safe, economical, reliable, and timely work. A strong answer connects the method to productivity, quality, cost, schedule, customer requirement, compliance, or sustainability as appropriate.

Worked answer method

Given: the project, process, resource, or organisational situation.
Required: plan, comparison, decision, or performance explanation.
Method: state objective → inputs → method → output → measure → corrective action.
Answer: finish with the likely benefit, limitation, and condition for successful implementation.

Exam answer blueprint

For a short-answer question on Management–Netiquette – HTML tags – Use HTML tags for creating simple web page., begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Management–Netiquette – HTML tags – Use HTML tags for creating simple web page., and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Management–Netiquette – HTML tags – Use HTML tags for creating simple web page.?
- How would you distinguish Management–Netiquette – HTML tags – Use HTML tags for creating simple web page. from a closely related idea?
- Where would an engineer or technician encounter Management–Netiquette – HTML tags – Use HTML tags for creating simple web page., and what must be checked before using it?
- What common mistake would make an answer or operation involving Management–Netiquette – HTML tags – Use HTML tags for creating simple web page. incorrect?

Common mistakes and safety emphasis

- Listing management terms without a sequence or decision criterion.
- Ignoring constraints, measurement, responsibility, or feedback.
- Confusing an objective with an activity or a result with an input.
- Giving a generic benefit without linking it to the engineering situation.

Malayalam support: Management–Netiquette – HTML tags – Use HTML tags for creating simple web page. □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□□ □□□□□□□□□. Learning goals

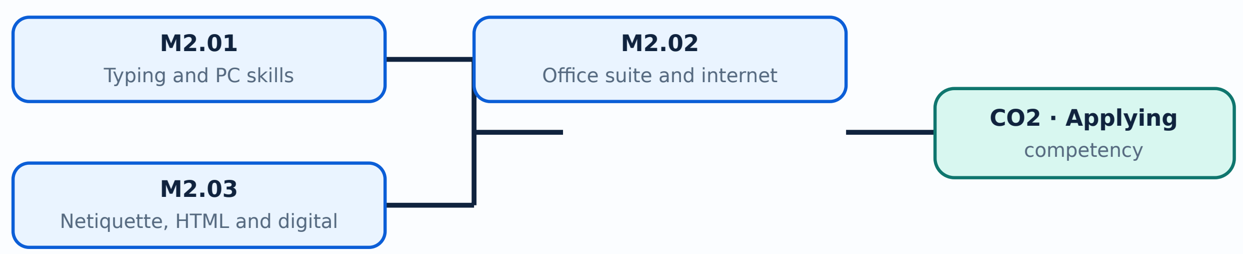
- Use office-suite functions for routine work.
- Communicate and share files safely.
- Create a simple HTML page and follow netiquette.

Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.



Learning map for Module module-2: the listed topics build the module competency.

M2.01 — Typing and PC skills (5 hours)

Concept and explanation

Efficient office work begins with keyboarding, file management, folders, naming, storage, operating-system navigation and basic troubleshooting.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Organise files.
- Use keyboard shortcuts responsibly.
- Protect work from accidental loss.

Handbook treatment

M2.01 — Typing and PC skills (5 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M2.01 — Typing and PC skills (5 hours) using the official terminology retained above.
- Organise the important elements of M2.01 — Typing and PC skills (5 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.01 — Typing and PC skills (5 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Information technology skills.
- Write an examination answer on M2.01 — Typing and PC skills (5 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.01 — Typing and PC skills (5 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M2.01 — Typing and PC skills (5 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M2.01 — Typing and PC skills (5 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.01 — Typing and PC skills (5 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.01 — Typing and PC skills (5 hours)?
- How would you distinguish M2.01 — Typing and PC skills (5 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.01 — Typing and PC skills (5 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.01 — Typing and PC skills (5 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

M2.02 — Office suite and internet (5 hours)

Concept and explanation

Word processors create documents, spreadsheets calculate and organise data, and presentation tools communicate information. Internet and collaboration tools extend office work across locations.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□□ □□□□□□□□□.

Study points

- Choose the right application.
- Use tables or formulas appropriately.
- Share a document with permissions.

Handbook treatment

M2.02 — Office suite and internet (5 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M2.02 — Office suite and internet (5 hours) using the official terminology retained above.
- Organise the important elements of M2.02 — Office suite and internet (5 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.02 — Office suite and internet (5 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Information technology skills.
- Write an examination answer on M2.02 — Office suite and internet (5 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.02 — Office suite and internet (5 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M2.02 — Office suite and internet (5 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M2.02 — Office suite and internet (5 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.02 — Office suite and internet (5 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.02 — Office suite and internet (5 hours)?
- How would you distinguish M2.02 — Office suite and internet (5 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.02 — Office suite and internet (5 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.02 — Office suite and internet (5 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M2.02 — Office suite and internet (5 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

M2.03 — Netiquette, HTML and digital communication (4 hours)

Concept and explanation

Email, intranet, video meetings, calendars, file sharing and social media require concise, respectful and secure communication. HTML tags define a simple page structure.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Apply netiquette.
- Recognise phishing or unsafe sharing.
- Use basic HTML tags.

Handbook treatment

M2.03 — Netiquette, HTML and digital communication (4 hours) should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

Learning objectives

- Define and scope M2.03 — Netiquette, HTML and digital communication (4 hours) using the official terminology retained above.
- Organise the important elements of M2.03 — Netiquette, HTML and digital communication (4 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.03 — Netiquette, HTML and digital communication (4 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Information technology skills.
- Write an examination answer on M2.03 — Netiquette, HTML and digital communication (4 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.03 — Netiquette, HTML and digital communication (4 hours). It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

Engineering application lens

For engineering practice, M2.03 — Netiquette, HTML and digital communication (4 hours) matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

Worked answer method

Given: the input conditions, required output, and any stated constraints.
Required: the logic sequence, program structure, truth table, or operating result.
Method: break the problem into named states or steps; evaluate them in order; test at least one alternate condition.
Answer: show the final sequence and state the expected output for each important condition.

Exam answer blueprint

For a short-answer question on M2.03 — Netiquette, HTML and digital communication (4 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.03 — Netiquette, HTML and digital communication (4 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.03 — Netiquette, HTML and digital communication (4 hours)?
- How would you distinguish M2.03 — Netiquette, HTML and digital communication (4 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.03 — Netiquette, HTML and digital communication (4 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.03 — Netiquette, HTML and digital communication (4 hours) incorrect?

Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

Malayalam support: M2.03 — Netiquette, HTML and digital communication (4 hours) □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. Module summary: IT skills include both tool operation and responsible handling of information, identity, files and communication.

OFFICIAL MODULE 3

Business correspondence and documentation

The official content includes office filing and documentation, memos, circulars, orders, notes, business-letter parts and qualities, trade reference, status enquiry, offer, quotation, order, complaint, collection, agency and circular letters; invoices, bills, debit/credit notes, challans, bills of exchange, promissory notes, banking, services, CRM, online payments and e-office.

Hours: 20
CO3 · Applying · Bloom level: Applying

Handbook study routine: Complete Module 3 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 3

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

Point-by-point study guide

Official syllabus point 1: Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo

Exact source point

Syllabus text: Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo

How to understand and study it

This point is an official syllabus requirement: “Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□□ Office, BusinessAdministration Skills, Filing/Documentation in offices - Memo □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo using the official terminology retained above.
- Organise the important elements of Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo into a logical sequence, classification, structure, or calculation.
- Connect Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo with one engineering decision, operation, measurement, or safety requirement in the context of Business correspondence and documentation.
- Write an examination answer on Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo?
- How would you distinguish Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo from a closely related idea?
- Where would an engineer or technician encounter Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo, and what must be checked before using it?
- What common mistake would make an answer or operation involving Office and BusinessAdministration Skills: Filing/Documentation in offices - Memo incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Learning objectives

- Define and scope Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of using the official terminology retained above.
- Organise the important elements of Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice-Cash Bill and Credit BillFormat-Preparation of into a logical sequence, classification, structure, or calculation.
- Connect Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of with one engineering decision, operation, measurement, or safety requirement in the context of Business correspondence and documentation.
- Write an examination answer on Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of?
- How would you distinguish Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of from a closely related idea?
- Where would an engineer or technician encounter Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice-Cash Bill and Credit BillFormat-Preparation of, and what must be checked before using it?
- What common mistake would make an answer or operation involving Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency

letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Identify various business correspondences – Letter of trade reference – status enquiry – letter of offer and quotation – letters placing order, execution and cancellation – complaints and adjustment letters – collection letters – agency letters – circular letters -Bookkeeping in business enterprises-Proforma Invoice -Preparation of Invoice- Cash Bill and Credit BillFormat-Preparation of □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□□. Official syllabus point 6: Cash Bill and Credit Bill- Debit Note and Credit Note -Format-Preparation of Debit and

Exact source point

Syllabus text: Cash Bill and Credit Bill- Debit Note and Credit Note -Format-Preparation of Debit and

How to understand and study it

This point is an official syllabus requirement: “Cash Bill and Credit Bill- Debit Note and Credit Note -Format-Preparation of Debit and”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Cash Bill, Credit Bill- Debit Note, Credit Note -Format-Preparation of Debit and □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. - Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of EFT- Mobile banking is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on EFT- Mobile banking, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is EFT- Mobile banking, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining EFT- Mobile banking?
- How would you distinguish EFT- Mobile banking from a closely related idea?
- Where would an engineer or technician encounter EFT- Mobile banking, and what must be checked before using it?
- What common mistake would make an answer or operation involving EFT- Mobile banking incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: EFT- Mobile banking [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

Official syllabus point 11: Speed Post and

Exact source point

Syllabus text: Speed Post and

How to understand and study it

This point is an official syllabus requirement: “Speed Post and”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□ Speed Post and □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Speed Post and must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope Speed Post and using the official terminology retained above.
- Organise the important elements of Speed Post and into a logical sequence, classification, structure, or calculation.
- Connect Speed Post and with one engineering decision, operation, measurement, or safety requirement in the context of Business correspondence and documentation.
- Write an examination answer on Speed Post and with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Speed Post and. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, Speed Post and is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on Speed Post and, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Speed Post and, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Speed Post and?
- How would you distinguish Speed Post and from a closely related idea?
- Where would an engineer or technician encounter Speed Post and, and what must be checked before using it?
- What common mistake would make an answer or operation involving Speed Post and incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Malayalam support: Speed Post and □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. Official syllabus point 13: Customer Relationship Management -Awareness of online payment transactions

Exact source point

Syllabus text: Customer Relationship Management -Awareness of online payment transactions

How to understand and study it

This point is an official syllabus requirement: “Customer Relationship Management - Awareness of online payment transactions”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Customer Relationship Management -Awareness of online payment transactions □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Customer Relationship Management -Awareness of online payment transactions is a decision and coordination topic. Learn the definitions, then connect the planning inputs, method, output, performance measure, and corrective action.

Learning objectives

- Define and scope Customer Relationship Management -Awareness of online payment transactions using the official terminology retained above.
- Organise the important elements of Customer Relationship Management -Awareness of online payment transactions into a logical sequence, classification, structure, or calculation.
- Connect Customer Relationship Management -Awareness of online payment transactions with one engineering decision, operation, measurement, or safety requirement in the context of Business correspondence and documentation.
- Write an examination answer on Customer Relationship Management -Awareness of online payment transactions with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Customer Relationship Management -Awareness of online payment transactions. It is a study organisation method, not an additional official syllabus requirement.

- Define the management term or objective.
- Identify the resources, constraints, people, information, and time involved.
- Describe the procedure or decision criteria in a logical sequence.
- Measure the result and state how deviations are controlled or improved.

Engineering application lens

Engineering organisations apply Customer Relationship Management -Awareness of online payment transactions to deliver safe, economical, reliable, and timely work. A strong answer connects the method to productivity, quality, cost, schedule, customer requirement, compliance, or sustainability as appropriate.

Worked answer method

Given: the project, process, resource, or organisational situation.
Required: plan, comparison, decision, or performance explanation.
Method: state objective → inputs → method → output → measure → corrective action.
Answer: finish with the likely benefit, limitation, and condition for successful implementation.

Exam answer blueprint

For a short-answer question on Customer Relationship Management -Awareness of online payment transactions, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Customer Relationship Management -Awareness of online payment transactions, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Customer Relationship Management -Awareness of online payment transactions?
- How would you distinguish Customer Relationship Management -Awareness of online payment transactions from a closely related idea?
- Where would an engineer or technician encounter Customer Relationship Management -Awareness of online payment transactions, and what must be checked before using it?
- What common mistake would make an answer or operation involving Customer Relationship Management -Awareness of online payment transactions incorrect?

Common mistakes and safety emphasis

- Listing management terms without a sequence or decision criterion.
- Ignoring constraints, measurement, responsibility, or feedback.
- Confusing an objective with an activity or a result with an input.
- Giving a generic benefit without linking it to the engineering situation.

Malayalam support: Customer Relationship Management -Awareness of online payment transactions [illegible] topic [illegible] [illegible] exact technical term [illegible]. Learning goals

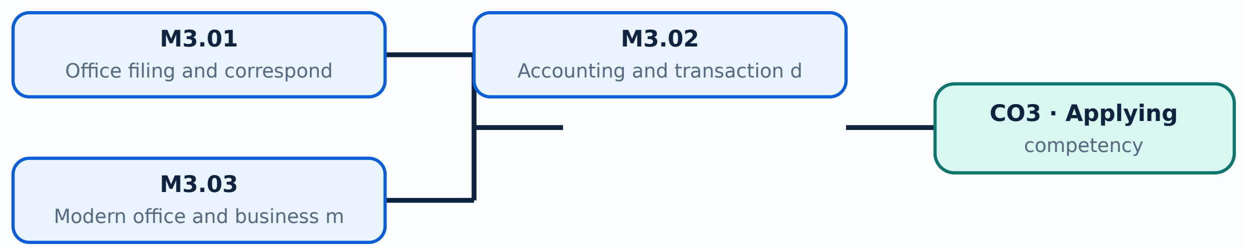
- Prepare common business documents.
- Identify accounting and banking documents.
- Maintain organised office records.

Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.



Learning map for Module module-3: the listed topics build the module competency.

M3.01 — Office filing and correspondence (6 hours)

Concept and explanation

Filing and documentation systems classify, store, retrieve and protect records. Memos, circulars, orders and office notes differ in audience, purpose and formality.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Choose a filing method.
- Identify document purpose.
- Maintain version and access control.

Handbook treatment

M3.01 — Office filing and correspondence (6 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M3.01 — Office filing and correspondence (6 hours) using the official terminology retained above.
- Organise the important elements of M3.01 — Office filing and correspondence (6 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.01 — Office filing and correspondence (6 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Business correspondence and documentation.
- Write an examination answer on M3.01 — Office filing and correspondence (6 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M3.01 — Office filing and correspondence (6 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M3.01 — Office filing and correspondence (6 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M3.01 — Office filing and correspondence (6 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M3.01 — Office filing and correspondence (6 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.01 — Office filing and correspondence (6 hours)?
- How would you distinguish M3.01 — Office filing and correspondence (6 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.01 — Office filing and correspondence (6 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.01 — Office filing and correspondence (6 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M3.01 — Office filing and correspondence (6 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. M3.02 — Accounting and transaction documents (7 hours)

Concept and explanation

Proforma invoices, cash/credit bills, debit and credit notes, delivery challans, bills of exchange and promissory notes record commercial transactions. Accuracy in names, dates, amounts and terms is essential.

> **Malayalam support:** □ □□□□□ □□□□□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Identify document parts.
- Prepare a basic format.
- Distinguish bill, note and challan.

Handbook treatment

M3.02 — Accounting and transaction documents (7 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M3.02 — Accounting and transaction documents (7 hours) using the official terminology retained above.
- Organise the important elements of M3.02 — Accounting and transaction documents (7 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.02 — Accounting and transaction documents (7 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Business correspondence and documentation.
- Write an examination answer on M3.02 — Accounting and transaction documents (7 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M3.02 — Accounting and transaction documents (7 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M3.02 — Accounting and transaction documents (7 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M3.02 — Accounting and transaction documents (7 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M3.02 — Accounting and transaction documents (7 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.02 — Accounting and transaction documents (7 hours)?
- How would you distinguish M3.02 — Accounting and transaction documents (7 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.02 — Accounting and transaction documents (7 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.02 — Accounting and transaction documents (7 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

M3.03 — Modern office and business management (7 hours)

Concept and explanation

Quotations, purchase orders, bank accounts, cheques, e-cheques, withdrawal forms, demand drafts, ECS, EFT, mobile banking, courier, online booking, CRM, online payments and e-office are modern administrative processes.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Trace a business transaction.
- Use secure digital practices.
- Explain customer-relationship and office-layout needs.

Handbook treatment

M3.03 — Modern office and business management (7 hours) is a decision and coordination topic. Learn the definitions, then connect the planning inputs, method, output, performance measure, and corrective action.

Learning objectives

- Define and scope M3.03 — Modern office and business management (7 hours) using the official terminology retained above.
- Organise the important elements of M3.03 — Modern office and business management (7 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.03 — Modern office and business management (7 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Business correspondence and documentation.
- Write an examination answer on M3.03 — Modern office and business management (7 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M3.03 — Modern office and business management (7 hours). It is a study organisation method, not an additional official syllabus requirement.

- Define the management term or objective.
- Identify the resources, constraints, people, information, and time involved.
- Describe the procedure or decision criteria in a logical sequence.
- Measure the result and state how deviations are controlled or improved.

Engineering application lens

Engineering organisations apply M3.03 — Modern office and business management (7 hours) to deliver safe, economical, reliable, and timely work. A strong answer connects the method to productivity, quality, cost, schedule, customer requirement, compliance, or sustainability as appropriate.

Worked answer method

Given: the project, process, resource, or organisational situation.
Required: plan, comparison, decision, or performance explanation.
Method: state objective → inputs → method → output → measure → corrective action.
Answer: finish with the likely benefit, limitation, and condition for successful implementation.

Exam answer blueprint

For a short-answer question on M3.03 — Modern office and business management (7 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M3.03 — Modern office and business management (7 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.03 — Modern office and business management (7 hours)?
- How would you distinguish M3.03 — Modern office and business management (7 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.03 — Modern office and business management (7 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.03 — Modern office and business management (7 hours) incorrect?

Common mistakes and safety emphasis

- Listing management terms without a sequence or decision criterion.
- Ignoring constraints, measurement, responsibility, or feedback.
- Confusing an objective with an activity or a result with an input.
- Giving a generic benefit without linking it to the engineering situation.

Module summary: Documentation skills convert transactions and decisions into traceable, readable and legally useful records.

OFFICIAL MODULE 4

Company secretarial skills

The official content covers company-formation documents, Memorandum and Articles of Association, red-herring prospectus, e-forms, filing portals, registration procedure and authorities, certificates, share documents, meeting notices, agendas, minutes and chairman’s, directors’ and auditors’ reports.

Hours: 9
CO4 · Applying · Bloom level: Applying

Handbook study routine: Complete Module 4 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 4

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:
Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus-
Identify
E-Forms for Incorporation - Portals for filing of e-forms for incorporation - List the

Registration procedure & Registration authorities -Identify Incorporation certificate, Commencement certificate -Identify Share application - Letter of allotment - Share certificate- Drafting the Specimen Notice for meeting- Agenda of Statutory Meeting, Annual General Meeting- Board Meeting - Drafting minutes of Board meeting andAnnual
General meeting -Identify Specimen of Chairman’sReport, Directors’ Report and Auditors’
Report.

Point-by-point study guide

Official syllabus point 1: Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify

Exact source point

> **Syllabus text:** Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify

How to understand and study it

This point is an official syllabus requirement: “Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

> **Malayalam support:** □ syllabus point □□□□□□□□□□□ Company Secretarial Skills, Identify various documents for incorporating a company -Memorandum of Association, Articles of Association- Red herring prospectus- Identify □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Handbook treatment

Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify using the official terminology retained above.
- Organise the important elements of Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify into a logical sequence, classification, structure, or calculation.
- Connect Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify with one engineering decision, operation, measurement, or safety requirement in the context of Company secretarial skills.
- Write an examination answer on Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify?
- How would you distinguish Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify from a closely related idea?

- Where would an engineer or technician encounter Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify, and what must be checked before using it?
- What common mistake would make an answer or operation involving Company Secretarial Skills: Identify various documents for incorporating a company -Memorandum of Association and Articles of Association- Red herring prospectus- Identify incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Registration procedure & Registration authorities -Identify Incorporation certificate is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Registration procedure & Registration authorities -Identify Incorporation certificate using the official terminology retained above.
- Organise the important elements of Registration procedure & Registration authorities -Identify Incorporation certificate into a logical sequence, classification, structure, or calculation.
- Connect Registration procedure & Registration authorities -Identify Incorporation certificate with one engineering decision, operation, measurement, or safety requirement in the context of Company secretarial skills.
- Write an examination answer on Registration procedure & Registration authorities -Identify Incorporation certificate with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Registration procedure & Registration authorities -Identify Incorporation certificate. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Registration procedure & Registration authorities -Identify Incorporation certificate is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Registration procedure & Registration authorities -Identify Incorporation certificate, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Registration procedure & Registration authorities -Identify Incorporation certificate, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Registration procedure & Registration authorities -Identify Incorporation certificate?
- How would you distinguish Registration procedure & Registration authorities -Identify Incorporation certificate from a closely related idea?
- Where would an engineer or technician encounter Registration procedure & Registration authorities -Identify Incorporation certificate, and what must be checked before using it?
- What common mistake would make an answer or operation involving Registration procedure & Registration authorities -Identify Incorporation certificate incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Official syllabus point 6: Commencement certificate -Identify Share application

Exact source point

Syllabus text: Commencement certificate -Identify Share application

How to understand and study it

This point is an official syllabus requirement: “Commencement certificate -Identify Share application”. Connect each named application to the technical concept: identify the requirement, the component or method used, and the result obtained. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Commencement certificate -Identify Share application □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Commencement certificate -Identify Share application is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Commencement certificate -Identify Share application using the official terminology retained above.
- Organise the important elements of Commencement certificate -Identify Share application into a logical sequence, classification, structure, or calculation.
- Connect Commencement certificate -Identify Share application with one engineering decision, operation, measurement, or safety requirement in the context of Company secretarial skills.
- Write an examination answer on Commencement certificate -Identify Share application with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Commencement certificate -Identify Share application. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Commencement certificate -Identify Share application is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Commencement certificate -Identify Share application, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Commencement certificate -Identify Share application, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Commencement certificate -Identify Share application?
- How would you distinguish Commencement certificate -Identify Share application from a closely related idea?
- Where would an engineer or technician encounter Commencement certificate -Identify Share application, and what must be checked before using it?
- What common mistake would make an answer or operation involving Commencement certificate -Identify Share application incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Commencement certificate -Identify Share application [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. Official syllabus point 7: Letter of allotment

Exact source point

Syllabus text: Letter of allotment

How to understand and study it

This point is an official syllabus requirement: “Letter of allotment”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Letter of allotment □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Learning goals

- Identify company-formation records.
- Prepare meeting documents.
- Recognise statutory and governance records.

Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.

Learning map for Module module-4: the listed topics build the module competency.

M4.01 — Company-formation documents (3 hours)

Concept and explanation

Formation involves documents such as Memorandum of Association, Articles of Association, prospectus-related records, e-forms, registration information and certificates.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Identify the purpose of each document.
- Follow a filing sequence.
- Record authority and date.

Handbook treatment

M4.01 — Company-formation documents (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M4.01 — Company-formation documents (3 hours) using the official terminology retained above.
- Organise the important elements of M4.01 — Company-formation documents (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.01 — Company-formation documents (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Company secretarial skills.
- Write an examination answer on M4.01 — Company-formation documents (3 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M4.01 — Company-formation documents (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M4.01 — Company-formation documents (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M4.01 — Company-formation documents (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M4.01 — Company-formation documents (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.01 — Company-formation documents (3 hours)?
- How would you distinguish M4.01 — Company-formation documents (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.01 — Company-formation documents (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.01 — Company-formation documents (3 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

M4.02 — Company correspondence and share records (3 hours)

Concept and explanation

Company correspondence includes notices and communications with members or authorities. Share application, allotment letters and share certificates record ownership-related processes.

> **Malayalam support:** □ □□□□ □□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□ □□□□□□□□.

Study points

- Identify correspondence.
- Maintain accurate registers.
- Protect confidential information.

Handbook treatment

M4.02 — Company correspondence and share records (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M4.02 — Company correspondence and share records (3 hours) using the official terminology retained above.
- Organise the important elements of M4.02 — Company correspondence and share records (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.02 — Company correspondence and share records (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Company secretarial skills.
- Write an examination answer on M4.02 — Company correspondence and share records (3 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M4.02 — Company correspondence and share records (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M4.02 — Company correspondence and share records (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M4.02 — Company correspondence and share records (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M4.02 — Company correspondence and share records (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.02 — Company correspondence and share records (3 hours)?
- How would you distinguish M4.02 — Company correspondence and share records (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.02 — Company correspondence and share records (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.02 — Company correspondence and share records (3 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M4.02 — Company correspondence and share records (3 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

M4.03 — Meetings, minutes and reports (3 hours)

Concept and explanation

A meeting requires notice, agenda, attendance, proceedings and minutes. Statutory, annual-general and board meetings have different purposes; chairman’s, directors’ and auditors’ reports communicate governance information.

> **Malayalam support:** □ □□□□□ □□□□□□□□□□□□□□□□□□□ English technical terms □□□□□□□□□ □□□□□□□□□.

Study points

- Prepare an agenda.
- Record minutes objectively.
- Distinguish report roles.

Handbook treatment

M4.03 — Meetings, minutes and reports (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M4.03 — Meetings, minutes and reports (3 hours) using the official terminology retained above.
- Organise the important elements of M4.03 — Meetings, minutes and reports (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.03 — Meetings, minutes and reports (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Company secretarial skills.
- Write an examination answer on M4.03 — Meetings, minutes and reports (3 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M4.03 — Meetings, minutes and reports (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M4.03 — Meetings, minutes and reports (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M4.03 — Meetings, minutes and reports (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M4.03 — Meetings, minutes and reports (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.03 — Meetings, minutes and reports (3 hours)?
- How would you distinguish M4.03 — Meetings, minutes and reports (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.03 — Meetings, minutes and reports (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.03 — Meetings, minutes and reports (3 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Official Activities and Practical Requirements

Official activities / self-learning

- Prepare a resume, formal letter, office memo, invoice, meeting notice, agenda and minutes as practical office exercises.

Practical requirements / equipment

- Computer, office suite, internet and document-management tools.

Assessment Methodology

Official assessment information is reproduced below from the supplied syllabus.

- Series Test: 2 periods/assessment component as stated in the supplied syllabus; the course header states No Credit and does not state a separate CIE/ESE mark distribution.

Module-wise Questions and Answers

module-1 — Communication and interpersonal skills

1. Explain Communication process and workplace importance. **[3 marks]**

Communication involves sender, message, channel, receiver, feedback and context. Barriers may be physical, semantic, psychological, organisational or technological; professional success depends on reducing them.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

2. Explain Core language and workplace skills. **[3 marks]**

Verbal, non-verbal, listening, speaking, reading and writing skills support workplace performance. Globalisation increases the need for clear English communication across roles and cultures.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

3. Explain Group discussion, writing and interpersonal skills. **[3 marks]**

Group discussions require preparation, turn-taking, evidence, respectful disagreement and conclusion. Newspaper reading, reports, articles, resumes and telephone etiquette develop communication and employability.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

module-2 — Information technology skills

4. Explain Typing and PC skills. **[3 marks]**

Efficient office work begins with keyboarding, file management, folders, naming, storage, operating-system navigation and basic troubleshooting.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

5. Explain Office suite and internet. **[3 marks]**

Word processors create documents, spreadsheets calculate and organise data, and presentation tools communicate information. Internet and collaboration tools extend office work across locations.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

6. Explain Netiquette, HTML and digital communication. **[3 marks]**

Email, intranet, video meetings, calendars, file sharing and social media require concise, respectful and secure communication. HTML tags define a simple page structure.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

module-3 — Business correspondence and documentation

7. Explain Office filing and correspondence. **[3 marks]**

Filing and documentation systems classify, store, retrieve and protect records. Memos, circulars, orders and office notes differ in audience, purpose and formality.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

8. Explain Accounting and transaction documents. **[3 marks]**

Proforma invoices, cash/credit bills, debit and credit notes, delivery challans, bills of exchange and promissory notes record commercial transactions. Accuracy in names, dates, amounts and terms is essential.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

9. Explain Modern office and business management. **[3 marks]**

Quotations, purchase orders, bank accounts, cheques, e-cheques, withdrawal forms, demand drafts, ECS, EFT, mobile banking, courier, online booking, CRM, online payments and e-office are modern administrative processes.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

module-4 — Company secretarial skills

10. Explain Company-formation documents. **[3 marks]**

Formation involves documents such as Memorandum of Association, Articles of Association, prospectus-related records, e-forms, registration information and certificates.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

11. Explain Company correspondence and share records. **[3 marks]**

Company correspondence includes notices and communications with members or authorities. Share application, allotment letters and share certificates record ownership-related processes.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

12. Explain Meetings, minutes and reports. **[3 marks]**

A meeting requires notice, agenda, attendance, proceedings and minutes. Statutory, annual-general and board meetings have different purposes; chairman's, directors' and auditors' reports communicate governance information.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

Practice Model Question Paper

Practice Model Paper — Not an Official Examination Paper

This paper is generated from the supplied module coverage for revision and does not claim to reproduce the official examination pattern.

1. **1.** Define or explain *Communication process and workplace importance* with one relevant application. (5 marks)
2. **2.** Define or explain *Core language and workplace skills* with one relevant application. (5 marks)
3. **3.** Define or explain *Typing and PC skills* with one relevant application. (5 marks)
4. **4.** Define or explain *Office suite and internet* with one relevant application. (5 marks)
5. **5.** Define or explain *Office filing and correspondence* with one relevant application. (5 marks)
6. **6.** Define or explain *Accounting and transaction documents* with one relevant application. (5 marks)

7. **7.** Define or explain *Company-formation documents* with one relevant application. (5 marks)
8. **8.** Define or explain *Company correspondence and share records* with one relevant application. (5 marks)

> **Writing advice:** Use headings, standard terminology, and labelled diagrams or procedures where relevant.

Quick Revision

Module-wise key points

- **Communication and interpersonal skills:** Effective office work depends on clarity, listening, respectful behaviour, accurate writing and awareness of audience.
- **Information technology skills:** IT skills include both tool operation and responsible handling of information, identity, files and communication.
- **Business correspondence and documentation:** Documentation skills convert transactions and decisions into traceable, readable and legally useful records.
- **Company secretarial skills:** Secretarial work depends on correct documents, deadlines, authority, records and minutes.

Exam checklist

- Write the official terminology before adding explanation.
- Use a labelled diagram or step sequence when it improves the answer.
- Check conditions, boundaries, safety, hygiene, and documentation points.
- Separate official syllabus information from your own example.

> **Last-minute revision:** Review the coverage table, formula bank, diagram library, and common-mistake notes inside every topic.

Glossary

Technical glossary

Term	Short meaning
Communication process and workplace importance	Communication involves sender, message, channel, receiver, feedback and context. Barriers may be physical, semantic, psychological, organisational or technological; professional success depends on reducing them.
Core language and workplace skills	Verbal, non-verbal, listening, speaking, reading and writing skills support workplace performance. Globalisation increases the need for clear English communication across roles and cultures.
Group discussion, writing and interpersonal skills	Group discussions require preparation, turn-taking, evidence, respectful disagreement and conclusion. Newspaper reading, reports, articles, resumes and telephone etiquette develop communication and employability.
Typing and PC skills	Efficient office work begins with keyboarding, file management, folders, naming, storage, operating-system navigation and basic troubleshooting.
Office suite and internet	Word processors create documents, spreadsheets calculate and organise data, and presentation tools communicate information. Internet and collaboration tools extend office work across locations.
Netiquette, HTML and digital communication	Email, intranet, video meetings, calendars, file sharing and social media require concise, respectful and secure communication. HTML tags define a simple page structure.
Office filing and correspondence	Filing and documentation systems classify, store, retrieve and protect records. Memos, circulars, orders and office notes differ in audience, purpose and formality.
Accounting and transaction documents	Proforma invoices, cash/credit bills, debit and credit notes, delivery challans, bills of exchange and promissory notes record commercial transactions. Accuracy in names, dates, amounts and terms is essential.
Modern office and business management	Quotations, purchase orders, bank accounts, cheques, e-cheques, withdrawal forms, demand drafts, ECS, EFT, mobile banking, courier, online booking, CRM, online payments and e-office are modern administrative processes.
Company-formation documents	Formation involves documents such as Memorandum of Association, Articles of Association, prospectus-related records, e-forms, registration information and certificates.
Company correspondence and share records	Company correspondence includes notices and communications with members or authorities. Share application, allotment letters and share certificates record ownership-related processes.
Meetings, minutes and reports	A meeting requires notice, agenda, attendance, proceedings and minutes. Statutory, annual-general and board meetings have different purposes; chairman’s, directors’ and auditors’ reports communicate governance information.
