Official Source Declaration

This lesson uses the supplied official syllabus PDF as the authoritative source for course information, revision, modules, topics, objectives, Course Outcomes, assessment information, official activities, practical requirements, and references.

Source handling: Official wording and numerical values are retained wherever supplied. Educational explanations, Malayalam support, examples, diagrams, and revision questions are added as study support and are not presented as additional official requirements.

Transparency note: Official assessment information is reproduced below from the supplied syllabus. Any limitation in the supplied PDF is not silently corrected.

How to Study This Lesson

Recommended sequence

1. Begin with the official source declaration and course dashboard.

2. Study each module in the official order and keep the coverage table as a checklist.
3. Open every topic, understand the example or procedure, and write your own short answer.
4. Use the revision section, glossary, questions, and practice paper after completing the modules.

Study principle: Keep English technical terminology, symbols, units, and official assessment wording unchanged in examination answers. Use the Malayalam support blocks only as a bridge to understanding.

Handbook method: Do not treat a topic as completed after reading its heading. For every topic card, complete the learning objectives, follow the conceptual framework, write the worked answer method, and answer the self-check questions. This creates a study record that is useful for class learning and examination preparation.

Module-hour and outcome mapping

No.	Module	Official hours	Relevant CO / level
1	Organisation, Managers and Cognitive Functions	6	CO1
2	Individual Behaviour and Motivation	8	CO2

No.	Module	Official hours	Relevant CO / level
3	Groups, Leadership, Stress and Conflict	8	CO3
4	Organisational Change and Culture	6	CO4

Prerequisites

- Nil.

How to study this lesson

1. Read the module introduction and learning goals.
2. Open every topic and reproduce its example, sequence, or procedure.
3. Use Malayalam support as a bridge; retain English technical terms for examinations.
4. Attempt the module questions without looking at the answers.

Objectives, Course Outcomes and CO–PO Information

Official course objectives

1. Understand how organisations function and how managers contribute to organisational goals.
2. Compare and discuss management practices and express views on corporate practices.

Course Outcomes

1. Explain the influence of organisational behaviour on organisational effectiveness.
2. Apply factors affecting individual behaviour and performance.
3. Explain groups and teams and the effect of individual behaviour on team performance.
4. Explain organisational change and culture.

CO–PO mapping as supplied

Legacy-format CO–PO matrix uses PO1–PO7 with sparse values.
Legend: 3 = high/strong correlation; 2 = medium/moderate correlation; 1 = low/weak correlation; – = no correlation.

Complete Syllabus Coverage

Official syllabus point-by-point coverage

This audit layer maps every official source block to the corresponding lesson module. The source transcript is retained verbatim as extracted from the supplied syllabus; the study guidance below is educational support and is not presented as additional official syllabus content. No official point is intentionally omitted.

Source-to-lesson coverage map

Module	Lesson topic cards	Source basis	Official point units
Module 1	3	Official Contents block	2
Module 2	4	Official Contents block	7
Module 3	4	Official Contents block	13
Module 4	3	Official Contents block	5

Use this checklist to confirm that every official module topic is represented in the lesson.

3. Groups, Leadership, Stress and Conflict
CO3 · 8 hours

4. Organisational Change and Culture
CO4 · 6 hours

The roadmap follows the order of the supplied syllabus.

OFFICIAL MODULE 1

Organisation, Managers and Cognitive Functions

This module introduces organisations, managerial work, organisational behaviour, and the cognitive functions that influence work.

Hours: 6
CO1 · Bloom level: Understanding

Handbook study routine: Complete Module 1 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words.

Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 1

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:
Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior,
Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications

Point-by-point study guide

Official syllabus point 1: Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior

Exact source point

> **Syllabus text:** Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior

How to understand and study it

This point is an official syllabus requirement: "Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior". Begin with the exact definition or meaning, then identify the purpose, scope, and terminology contained in the point. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

> **Malayalam support:** □ syllabus point □□□□□□□□□□□ Introduction to organization, organization, managers, manager' roles □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

> **Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Introduction to organization, organization and managers, manager’ roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior is a decision and coordination topic. Learn the definitions, then connect the planning inputs, method, output, performance measure, and corrective action.

Learning objectives

- Define and scope Introduction to organization, organization and managers, manager’ roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior using the official terminology retained above.
- Organise the important elements of Introduction to organization, organization and managers, manager’ roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior into a logical sequence, classification, structure, or calculation.
- Connect Introduction to organization, organization and managers, manager’ roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior with one engineering decision, operation, measurement, or safety requirement in the context of Organisation, Managers and Cognitive Functions.
- Write an examination answer on Introduction to organization, organization and managers, manager’ roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Introduction to organization, organization and managers, manager’ roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior. It is a study organisation method, not an additional official syllabus requirement.

- Define the management term or objective.
- Identify the resources, constraints, people, information, and time involved.
- Describe the procedure or decision criteria in a logical sequence.
- Measure the result and state how deviations are controlled or improved.

Engineering application lens

Engineering organisations apply Introduction to organization, organization and managers, manager’ roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior to deliver safe, economical, reliable, and timely work. A strong answer connects the method to productivity, quality, cost, schedule, customer requirement, compliance, or sustainability as appropriate.

Worked answer method

Given: the project, process, resource, or organisational situation.
Required: plan, comparison, decision, or performance explanation.
Method: state objective → inputs → method → output → measure → corrective action.
Answer: finish with the likely benefit, limitation, and condition for successful implementation.

Exam answer blueprint

For a short-answer question on Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior?
- How would you distinguish Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior from a closely related idea?
- Where would an engineer or technician encounter Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior, and what must be checked before using it?
- What common mistake would make an answer or operation involving Introduction to organization, organization and managers, manager' roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior incorrect?

Common mistakes and safety emphasis

- Listing management terms without a sequence or decision criterion.
- Ignoring constraints, measurement, responsibility, or feedback.
- Confusing an objective with an activity or a result with an input.
- Giving a generic benefit without linking it to the engineering situation.

Malayalam support: Introduction to organization, organization and managers, manager’ roles and skills, behaviour at work, Organisational Behaviour, need for studying organizational behavior □□□□ topic □□□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□□. Exam answer □□□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□□.

Official syllabus point 2: Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications

Exact source point

Syllabus text: Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications

How to understand and study it

This point is an official syllabus requirement: “Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications”. Study the sequence from input or initial condition to operation and final output. Note the role of each named stage and the cause-and-effect relationship. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Write the operating sequence in numbered steps, including the input, intermediate action, and output.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□ Disciplines that contribute to OB field, Basic behavioral Process, Cognitive functions -intelligence, Creativity □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications using the official terminology retained above.
- Organise the important elements of Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications into a logical sequence, classification, structure, or calculation.
- Connect Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications with one engineering decision, operation, measurement, or safety requirement in the context of Organisation, Managers and Cognitive Functions.
- Write an examination answer on Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications?
- How would you distinguish Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications from a closely related idea?
- Where would an engineer or technician encounter Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications, and what must be checked before using it?

- What common mistake would make an answer or operation involving Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Malayalam support: Disciplines that contribute to OB field, Basic behavioral Process: Cognitive functions -intelligence, Creativity, Problem solving, Learning and its process - implications □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□□.

Learning goals

- Explain organisation and manager roles/skills.
- Define organisational behaviour and its contributing disciplines.
- Describe intelligence, creativity, problem solving, learning, and their implications.

Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.

Learning map for Module module-1: the listed topics build the module competency.

M1.01 — Organisation, managers, roles and skills (2 hours)

Concept and explanation

An organisation is a coordinated group working toward shared objectives. Managers plan, organise, lead, and control resources while performing interpersonal, informational, and decisional roles. Technical, human, and conceptual skills become more important in different managerial contexts.

Malayalam support: Organisation shared goal-□□□□ coordinated group □□□. Manager planning, organising, leading, controlling □□□□□□□□□□; technical, human, conceptual skills □□□□□□□□□.

Study points

- Identify a manager’s role in a familiar activity.
- Distinguish task responsibility from authority and accountability.

Suggested procedure

1. Map ten manager actions to interpersonal, informational, or decisional roles.

Engineering / workplace application: A college-event coordinator allocates work, communicates information, and resolves constraints.

Illustrative example: A team leader may have authority to assign tasks but remains accountable for the outcome.

Common mistake: Calling every senior employee a manager ignores the work of coordination and responsibility.

Handbook treatment

M1.01 — Organisation, managers, roles and skills (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M1.01 — Organisation, managers, roles and skills (2 hours) using the official terminology retained above.
- Organise the important elements of M1.01 — Organisation, managers, roles and skills (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.01 — Organisation, managers, roles and skills (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Organisation, Managers and Cognitive Functions.
- Write an examination answer on M1.01 — Organisation, managers, roles and skills (2 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M1.01 — Organisation, managers, roles and skills (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M1.01 — Organisation, managers, roles and skills (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M1.01 — Organisation, managers, roles and skills (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M1.01 — Organisation, managers, roles and skills (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.01 — Organisation, managers, roles and skills (2 hours)?
- How would you distinguish M1.01 — Organisation, managers, roles and skills (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.01 — Organisation, managers, roles and skills (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.01 — Organisation, managers, roles and skills (2 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M1.01 — Organisation, managers, roles and skills (2 hours)
□□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□.

M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours)

Concept and explanation

Organisational Behaviour studies behaviour at work: how individuals and groups act in organisations and how structure and processes influence behaviour. Psychology, sociology, social psychology, anthropology, and political science contribute concepts. OB helps explain, predict, and influence behaviour ethically.

Malayalam support: OB organisation-□ individual/group behaviour □□□□□□□□□□□. Psychology, sociology □□□□□□□□ disciplines □□□□□ support □□□□□□□□.

Study points

- State the scope and importance of OB.
- Separate explanation from manipulation; respect people and context.

Suggested procedure

1. Create a concept map of OB and its contributing disciplines.

Engineering / workplace application: OB supports teamwork, motivation, communication, performance, and change.

Illustrative example: A communication problem may involve individual perception and also organisational structure.

Common mistake: Reducing OB to personality alone ignores groups, structure, culture, and systems.

Handbook treatment

M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours) using the official terminology retained above.
- Organise the important elements of M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Organisation, Managers and Cognitive Functions.
- Write an examination answer on M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours)?
- How would you distinguish M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M1.02 — Organisational Behaviour: definition, need and disciplines (2 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours)

Concept and explanation

Cognitive functions influence how people receive, interpret, remember, and use information. Intelligence is not one simple measure; creativity generates alternatives; problem solving defines a gap and evaluates options; learning changes knowledge or behaviour through experience and feedback.

Malayalam support: Cognitive functions information [illegible] problem solve [illegible] [illegible]. Creativity alternatives [illegible]; learning feedback-[illegible] [illegible] [illegible].

Study points

- Describe the stages of problem solving.
- Suggest a learning method for a new workplace task.

Suggested procedure

1. Use a problem-solving worksheet for a small organisational issue.

Engineering / workplace application: Design thinking, training, brainstorming, and root-cause analysis use cognitive processes.

Illustrative example: For a delayed project, define the problem, collect facts, generate options, evaluate, implement, and review.

Common mistake: Treating a first idea as the only solution prevents creative alternatives.

Handbook treatment

M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours) must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours) using the official terminology retained above.
- Organise the important elements of M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Organisation, Managers and Cognitive Functions.
- Write an examination answer on M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours) is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours)?
- How would you distinguish M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.03 — Cognitive functions: intelligence, creativity, problem solving and learning (2 hours) incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Module summary: Organisational behaviour begins with the organisation, managerial role, and cognitive processes that shape work.

OFFICIAL MODULE 2

Individual Behaviour and Motivation

This module examines differences among individuals, perception, personality, and motivation theories.

Hours: 8
CO2 · Bloom level: Applying

Handbook study routine: Complete Module 2 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 2

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:
Individual behavior and individual differences, Perception - Definition - Factors affecting perception, Personality - Determinants & Types, Motivation - Maslow’s - Herzberg’s -McGregor’s theories of motivation

Use the concepts of groups and teams to find the effect of individual

Point-by-point study guide

Official syllabus point 1: Individual behavior and individual differences, Perception

Exact source point

Syllabus text: Individual behavior and individual differences, Perception

How to understand and study it

This point is an official syllabus requirement: “Individual behavior and individual differences, Perception”. Prepare a comparison using the same criteria for every item: principle, performance, cost or complexity, limitation, and application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Individual behavior, individual differences, Perception □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Individual behavior and individual differences, Perception is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Individual behavior and individual differences, Perception using the official terminology retained above.
- Organise the important elements of Individual behavior and individual differences, Perception into a logical sequence, classification, structure, or calculation.
- Connect Individual behavior and individual differences, Perception with one engineering decision, operation, measurement, or safety requirement in the context of Individual Behaviour and Motivation.
- Write an examination answer on Individual behavior and individual differences, Perception with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Individual behavior and individual differences, Perception. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Individual behavior and individual differences, Perception is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Individual behavior and individual differences, Perception, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Individual behavior and individual differences, Perception, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Individual behavior and individual differences, Perception?
- How would you distinguish Individual behavior and individual differences, Perception from a closely related idea?
- Where would an engineer or technician encounter Individual behavior and individual differences, Perception, and what must be checked before using it?
- What common mistake would make an answer or operation involving Individual behavior and individual differences, Perception incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Official syllabus point 2: Definition

Exact source point

Syllabus text: Definition

How to understand and study it

This point is an official syllabus requirement: “Definition”. Begin with the exact definition or meaning, then identify the purpose, scope, and terminology contained in the point. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: ▯ syllabus point ▯▯▯▯▯▯▯▯▯▯▯ Definition ▯▯▯▯ technical terms English-▯▯▯▯▯▯▯ ▯▯▯▯▯▯▯. ▯▯▯▯▯ definition ▯▯▯▯▯▯▯▯▯▯ principle ▯▯▯▯▯▯▯▯▯▯▯▯▯; ▯▯▯▯ ▯▯▯ term-▯▯▯▯ function, difference, application ▯▯▯▯▯▯ ▯▯▯▯▯▯▯▯▯▯ ▯▯▯▯▯▯. Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Definition is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Definition using the official terminology retained above.
- Organise the important elements of Definition into a logical sequence, classification, structure, or calculation.
- Connect Definition with one engineering decision, operation, measurement, or safety requirement in the context of Individual Behaviour and Motivation.
- Write an examination answer on Definition with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Definition. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Definition is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Definition, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Definition, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Definition?
- How would you distinguish Definition from a closely related idea?
- Where would an engineer or technician encounter Definition, and what must be checked before using it?
- What common mistake would make an answer or operation involving Definition incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Definition □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. Official syllabus point 3: Factors affecting perception, Personality

Exact source point

Syllabus text: Factors affecting perception, Personality

How to understand and study it

This point is an official syllabus requirement: “Factors affecting perception, Personality”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Maslow's is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Maslow's using the official terminology retained above.
- Organise the important elements of Maslow's into a logical sequence, classification, structure, or calculation.
- Connect Maslow's with one engineering decision, operation, measurement, or safety requirement in the context of Individual Behaviour and Motivation.
- Write an examination answer on Maslow's with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Maslow's. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Maslow's is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Maslow’s, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Maslow’s, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Maslow’s?
- How would you distinguish Maslow’s from a closely related idea?
- Where would an engineer or technician encounter Maslow’s, and what must be checked before using it?
- What common mistake would make an answer or operation involving Maslow’s incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Maslow’s □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Herzberg's -McGregor's theories of motivation is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Herzberg's -McGregor's theories of motivation using the official terminology retained above.
- Organise the important elements of Herzberg's -McGregor's theories of motivation into a logical sequence, classification, structure, or calculation.
- Connect Herzberg's -McGregor's theories of motivation with one engineering decision, operation, measurement, or safety requirement in the context of Individual Behaviour and Motivation.
- Write an examination answer on Herzberg's -McGregor's theories of motivation with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Herzberg's -McGregor's theories of motivation. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Herzberg's -McGregor's theories of motivation is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Herzberg's -McGregor's theories of motivation, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Herzberg's -McGregor's theories of motivation, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Herzberg's -McGregor's theories of motivation?
- How would you distinguish Herzberg's -McGregor's theories of motivation from a closely related idea?
- Where would an engineer or technician encounter Herzberg's -McGregor's theories of motivation, and what must be checked before using it?
- What common mistake would make an answer or operation involving Herzberg's -McGregor's theories of motivation incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Herzberg’s -McGregor’s theories of motivation □□□□ topic □□□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□– □□□ □□□□□ □□□□□□□□□□□□□□.

Official syllabus point 7: Use the concepts of groups and teams to find the effect of individual

Exact source point

Syllabus text: Use the concepts of groups and teams to find the effect of individual

How to understand and study it

This point is an official syllabus requirement: “Use the concepts of groups and teams to find the effect of individual”. Begin with the exact definition or meaning, then identify the purpose, scope, and terminology contained in the point. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: ▯ syllabus point ▯▯▯▯▯▯▯▯▯▯▯ Use the concepts of groups, teams to find the effect of individual ▯▯▯▯ technical terms English-▯▯▯▯▯▯▯ ▯▯▯▯▯▯▯. ▯▯▯▯▯ definition ▯▯▯▯▯▯▯▯▯ principle ▯▯▯▯▯▯▯▯▯▯▯▯; ▯▯▯▯ ▯▯▯ term-▯▯▯▯ function, difference, application ▯▯▯▯▯▯ ▯▯▯▯▯▯▯▯▯▯ ▯▯▯▯▯▯. Diagram, sequence, formula, unit ▯▯▯▯▯▯ ▯▯▯▯▯▯▯▯▯▯ ▯▯▯▯▯ ▯▯▯▯▯▯▯ revision ▯▯▯▯▯▯▯.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Use the concepts of groups and teams to find the effect of individual is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Use the concepts of groups and teams to find the effect of individual using the official terminology retained above.
- Organise the important elements of Use the concepts of groups and teams to find the effect of individual into a logical sequence, classification, structure, or calculation.
- Connect Use the concepts of groups and teams to find the effect of individual with one engineering decision, operation, measurement, or safety requirement in the context of Individual Behaviour and Motivation.
- Write an examination answer on Use the concepts of groups and teams to find the effect of individual with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Use the concepts of groups and teams to find the effect of individual. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Use the concepts of groups and teams to find the effect of individual is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Use the concepts of groups and teams to find the effect of individual, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Use the concepts of groups and teams to find the effect of individual, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Use the concepts of groups and teams to find the effect of individual?
- How would you distinguish Use the concepts of groups and teams to find the effect of individual from a closely related idea?
- Where would an engineer or technician encounter Use the concepts of groups and teams to find the effect of individual, and what must be checked before using it?
- What common mistake would make an answer or operation involving Use the concepts of groups and teams to find the effect of individual incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

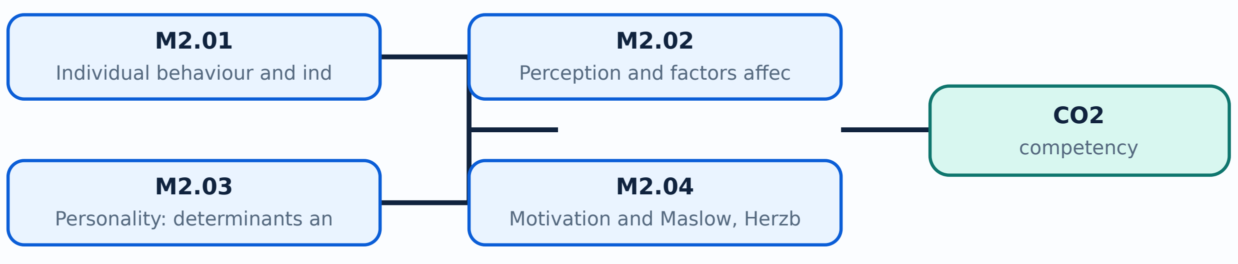
Malayalam support: Use the concepts of groups and teams to find the effect of individual □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□□.

Learning goals

- Explain individual differences and behaviour.
- Analyse perception and its factors.
- Describe personality determinants and types.
- Apply Maslow, Herzberg, and McGregor to simple cases.

Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.



Learning map for Module module-2: the listed topics build the module competency.

M2.01 — Individual behaviour and individual differences (1 hours)

Concept and explanation

Individual behaviour is influenced by ability, personality, perception, attitudes, values, emotions, experience, and context. People may respond differently to the same work situation. Managers should use fair, job-related evidence rather than stereotypes.

> **Malayalam support:** □□□ situation-□ individuals □□□□□□□□□□□□□ □□□□□□□□□□□□□; ability, personality, perception, values, context □□□□□□ □□□□□□□□□□□□□□□□.

Study points

- List factors affecting behaviour.
- Avoid stereotypes and use observable work evidence.

Suggested procedure

1. Compare behaviour, situation, and evidence in a small case.

> **Engineering / workplace application:** Task allocation and training become more effective when skills and support needs are understood.

> **Illustrative example:** Two team members may need different explanations but can meet the same performance standard.

> **Common mistake:** Assuming behaviour is fixed or fully explained by one trait is an oversimplification.

Handbook treatment

M2.01 — Individual behaviour and individual differences (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M2.01 — Individual behaviour and individual differences (1 hours) using the official terminology retained above.
- Organise the important elements of M2.01 — Individual behaviour and individual differences (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.01 — Individual behaviour and individual differences (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Individual Behaviour and Motivation.
- Write an examination answer on M2.01 — Individual behaviour and individual differences (1 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.01 — Individual behaviour and individual differences (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M2.01 — Individual behaviour and individual differences (1 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M2.01 — Individual behaviour and individual differences (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.01 — Individual behaviour and individual differences (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.01 — Individual behaviour and individual differences (1 hours)?
- How would you distinguish M2.01 — Individual behaviour and individual differences (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.01 — Individual behaviour and individual differences (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.01 — Individual behaviour and individual differences (1 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M2.01 — Individual behaviour and individual differences (1 hours) □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□.

M2.02 — Perception and factors affecting perception (1 hours)

Concept and explanation

Perception is the process of selecting, organising, and interpreting information. Factors include the perceiver, target, situation, attention, prior experience, expectations, and context. Selective perception, stereotyping, halo effect, and attribution errors can distort judgement.

> **Malayalam support:** Perception information select □□□□□□ interpret □□□□□□□□□ process □□□. Prior experience, expectation, context □□□□□□ bias □□□□□□□□□□.

Study points

- Explain one perceptual error.
- Check facts and seek another viewpoint before judging.

Suggested procedure

1. Rewrite a judgemental statement into an evidence-based observation.

> **Engineering / workplace application:** Performance feedback and interviews need structured criteria to reduce perception error.

> **Illustrative example:** A late arrival may be due to a one-time event; investigate before labelling a person careless.

> **Common mistake:** Confusing an impression with verified behaviour creates unfair decisions.

Handbook treatment

M2.02 — Perception and factors affecting perception (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M2.02 — Perception and factors affecting perception (1 hours) using the official terminology retained above.
- Organise the important elements of M2.02 — Perception and factors affecting perception (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.02 — Perception and factors affecting perception (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Individual Behaviour and Motivation.
- Write an examination answer on M2.02 — Perception and factors affecting perception (1 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.02 — Perception and factors affecting perception (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M2.02 — Perception and factors affecting perception (1 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M2.02 — Perception and factors affecting perception (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.02 — Perception and factors affecting perception (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.02 — Perception and factors affecting perception (1 hours)?
- How would you distinguish M2.02 — Perception and factors affecting perception (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.02 — Perception and factors affecting perception (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.02 — Perception and factors affecting perception (1 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

M2.03 — Personality: determinants and types (3 hours)

Concept and explanation

Personality is a relatively stable pattern of thoughts, feelings, and behaviour. Heredity, environment, culture, family, and situation contribute. Types or trait models can support communication awareness, but should not be used to label people rigidly or deny opportunity.

> **Malayalam support:** Personality heredity, environment, culture, experience, situation □□□□□□□□□□ □□□□□□□□□□□□□□□; type label rigid □□□ □□□□□□□□□□□□□□□.

Study points

- Describe determinants of personality.
- Use personality information ethically and voluntarily.

Suggested procedure

1. Create a non-sensitive reflection on preferred work conditions, not a diagnostic label.

> **Engineering / workplace application:** Team communication can improve when members understand different working preferences.

> **Illustrative example:** A preference for planning may help one task, but the person can learn flexible work too.

> **Common mistake:** Using a personality type as a permanent ability judgement is a common error.

Handbook treatment

M2.03 — Personality: determinants and types (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M2.03 — Personality: determinants and types (3 hours) using the official terminology retained above.
- Organise the important elements of M2.03 — Personality: determinants and types (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.03 — Personality: determinants and types (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Individual Behaviour and Motivation.
- Write an examination answer on M2.03 — Personality: determinants and types (3 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.03 — Personality: determinants and types (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M2.03 — Personality: determinants and types (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M2.03 — Personality: determinants and types (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.03 — Personality: determinants and types (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.03 — Personality: determinants and types (3 hours)?
- How would you distinguish M2.03 — Personality: determinants and types (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.03 — Personality: determinants and types (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.03 — Personality: determinants and types (3 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours)

Concept and explanation

Motivation is the force that directs, energises, and sustains behaviour. Maslow presents a hierarchy of needs; Herzberg distinguishes hygiene factors from motivators; McGregor contrasts assumptions about people in Theory X and Theory Y. These are frameworks, not universal laws.

> **Malayalam support:** Motivation behaviour-□□ direct, energise, sustain □□□□□□□□□□□. Maslow/Herzberg/McGregor frameworks □□□; □□□□□ □□□□□□□□□□ □□□□□□□□ □□□□□□□□□□□□□□.

Study points

- Compare the three theories.
- Match a workplace problem to a possible intervention and check its effect.

Suggested procedure

1. Analyse a case using each theory and state the limitation of the explanation.

> **Engineering / workplace application:** Recognition, meaningful work, fair conditions, autonomy, and growth can influence motivation.

> **Illustrative example:** If staff lack safe conditions, recognition alone may not solve dissatisfaction.

> **Common mistake:** Offering only money or assuming one theory explains everyone ignores context and individual needs.

Handbook treatment

M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours) using the official terminology retained above.
- Organise the important elements of M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Individual Behaviour and Motivation.
- Write an examination answer on M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours)?
- How would you distinguish M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M2.04 — Motivation and Maslow, Herzberg and McGregor (3 hours) □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□□ □□□□□□□□□. Module summary: Individual behaviour is understood more fairly when perception, personality, motivation, and evidence are considered together.

OFFICIAL MODULE 3

Groups, Leadership, Stress and Conflict

This module moves from individual behaviour to group interaction, leadership, stress, and conflict resolution.

Hours: 8
CO3 · Bloom level: Applying

Handbook study routine: Complete Module 3 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 3

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:
Group Behaviour - Types of groups - Interpersonal Behaviour - Group behaviour - Nature of Group - group norms and cohesion - formal and informal groups - Understand type of leadership - Stress Management - Sources - types - consequences of stress - strategies for managing stress - Conflicts - Sources - Types - conflict resolution process

Point-by-point study guide

Official syllabus point 1: Group Behaviour

Exact source point

Syllabus text: Group Behaviour

How to understand and study it

This point is an official syllabus requirement: “Group Behaviour”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□ Group Behaviour □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Group Behaviour is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Group Behaviour using the official terminology retained above.
- Organise the important elements of Group Behaviour into a logical sequence, classification, structure, or calculation.
- Connect Group Behaviour with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on Group Behaviour with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Group Behaviour. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Group Behaviour is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Group Behaviour, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Group Behaviour, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Group Behaviour?
- How would you distinguish Group Behaviour from a closely related idea?
- Where would an engineer or technician encounter Group Behaviour, and what must be checked before using it?
- What common mistake would make an answer or operation involving Group Behaviour incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Group Behaviour [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. Official syllabus point 2: Types of groups

Exact source point

Syllabus text: Types of groups

How to understand and study it

This point is an official syllabus requirement: “Types of groups”. Prepare a classification table. For every named type, learn its defining feature, distinguishing point, and one appropriate engineering context. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Prepare a table with type, defining feature, advantage or limitation, and application.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Types of groups □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Types of groups is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Types of groups using the official terminology retained above.
- Organise the important elements of Types of groups into a logical sequence, classification, structure, or calculation.
- Connect Types of groups with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on Types of groups with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Types of groups. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Types of groups is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Types of groups, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Types of groups, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Types of groups?
- How would you distinguish Types of groups from a closely related idea?
- Where would an engineer or technician encounter Types of groups, and what must be checked before using it?
- What common mistake would make an answer or operation involving Types of groups incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Types of groups □□□□ topic □□□□□□□□□□□□ □□□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□□.

Official syllabus point 3: Interpersonal Behaviour

Exact source point

Syllabus text: Interpersonal Behaviour

How to understand and study it

This point is an official syllabus requirement: “Interpersonal Behaviour”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Interpersonal Behaviour □□□□□ technical terms English-□□□□□□□□ □□□□□□□□. □□□□□□ definition □□□□□□□□□□□□ principle □□□□□□□□□□□□□□□; □□□□□ □□□□ term-□□□□□ function, difference, application □□□□□□□ □□□□□□□□□□□□ □□□□□□□. Diagram, sequence, formula, unit □□□□□□□ □□□□□□□□□□□□ □□□□□□ □□□□□□□□ revision □□□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Interpersonal Behaviour is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Interpersonal Behaviour using the official terminology retained above.
- Organise the important elements of Interpersonal Behaviour into a logical sequence, classification, structure, or calculation.
- Connect Interpersonal Behaviour with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on Interpersonal Behaviour with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Interpersonal Behaviour. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Interpersonal Behaviour is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Interpersonal Behaviour, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Interpersonal Behaviour, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Interpersonal Behaviour?
- How would you distinguish Interpersonal Behaviour from a closely related idea?

Official syllabus point 8: Understand type of leadership

Exact source point

Syllabus text: Understand type of leadership

How to understand and study it

This point is an official syllabus requirement: “Understand type of leadership”. Prepare a classification table. For every named type, learn its defining feature, distinguishing point, and one appropriate engineering context. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Prepare a table with type, defining feature, advantage or limitation, and application.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□ Understand type of leadership □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Understand type of leadership is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Understand type of leadership using the official terminology retained above.
- Organise the important elements of Understand type of leadership into a logical sequence, classification, structure, or calculation.
- Connect Understand type of leadership with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on Understand type of leadership with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Understand type of leadership. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Understand type of leadership is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Understand type of leadership, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Understand type of leadership, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Understand type of leadership?
- How would you distinguish Understand type of leadership from a closely related idea?
- Where would an engineer or technician encounter Understand type of leadership, and what must be checked before using it?
- What common mistake would make an answer or operation involving Understand type of leadership incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Understand type of leadership [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

Official syllabus point 9: Stress Management

Exact source point

Syllabus text: Stress Management

How to understand and study it

This point is an official syllabus requirement: “Stress Management”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Stress Management □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Stress Management must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope Stress Management using the official terminology retained above.
- Organise the important elements of Stress Management into a logical sequence, classification, structure, or calculation.
- Connect Stress Management with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on Stress Management with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Stress Management. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, Stress Management is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on Stress Management, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Stress Management, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Stress Management?
- How would you distinguish Stress Management from a closely related idea?
- Where would an engineer or technician encounter Stress Management, and what must be checked before using it?
- What common mistake would make an answer or operation involving Stress Management incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Malayalam support: Stress Management □□□□ topic □□□□□□□□□□□□ □□□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□□ □□□□□□□□□ □□□□□□□□□. Official syllabus point 10: consequences of stress

Exact source point

Syllabus text: consequences of stress

How to understand and study it

This point is an official syllabus requirement: “consequences of stress”. Study the sequence from input or initial condition to operation and final output. Note the role of each named stage and the cause-and-effect relationship. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Write the operating sequence in numbered steps, including the input, intermediate action, and output.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ consequences of stress □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

consequences of stress must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope consequences of stress using the official terminology retained above.
- Organise the important elements of consequences of stress into a logical sequence, classification, structure, or calculation.
- Connect consequences of stress with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on consequences of stress with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading consequences of stress. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, consequences of stress is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on consequences of stress, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is consequences of stress, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining consequences of stress?
- How would you distinguish consequences of stress from a closely related idea?
- Where would an engineer or technician encounter consequences of stress, and what must be checked before using it?
- What common mistake would make an answer or operation involving consequences of stress incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Official syllabus point 12: Conflicts

Exact source point

Syllabus text: Conflicts

How to understand and study it

This point is an official syllabus requirement: “Conflicts”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Conflicts □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Conflicts is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Conflicts using the official terminology retained above.
- Organise the important elements of Conflicts into a logical sequence, classification, structure, or calculation.
- Connect Conflicts with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on Conflicts with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Conflicts. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Conflicts is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Conflicts, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Conflicts, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Conflicts?
- How would you distinguish Conflicts from a closely related idea?
- Where would an engineer or technician encounter Conflicts, and what must be checked before using it?
- What common mistake would make an answer or operation involving Conflicts incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Conflicts □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□□.

Official syllabus point 13: conflict resolution process

Exact source point

Syllabus text: conflict resolution process

How to understand and study it

This point is an official syllabus requirement: “conflict resolution process”. Study the sequence from input or initial condition to operation and final output. Note the role of each named stage and the cause-and-effect relationship. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Write the operating sequence in numbered steps, including the input, intermediate action, and output.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□ conflict resolution process □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

conflict resolution process is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope conflict resolution process using the official terminology retained above.
- Organise the important elements of conflict resolution process into a logical sequence, classification, structure, or calculation.
- Connect conflict resolution process with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on conflict resolution process with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading conflict resolution process. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of conflict resolution process is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on conflict resolution process, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is conflict resolution process, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining conflict resolution process?
- How would you distinguish conflict resolution process from a closely related idea?
- Where would an engineer or technician encounter conflict resolution process, and what must be checked before using it?
- What common mistake would make an answer or operation involving conflict resolution process incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: conflict resolution process □□□□ topic □□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□□.

Learning goals

- Explain groups, norms, cohesion, formal and informal groups.
- Compare leadership and management and leadership styles.
- Identify stress sources and consequences.
- Apply conflict-resolution approaches.

Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.

Learning map for Module module-3: the listed topics build the module competency.

M3.01 — Group behaviour, types, norms and cohesion (3 hours)

Concept and explanation

A group contains interacting members with a shared relationship or purpose. Formal groups are created by the organisation; informal groups arise from social interaction. Norms guide behaviour, roles distribute expectations, and cohesion reflects attraction and commitment. Cohesion can help performance but may also produce groupthink.

Malayalam support: Formal group organisation □□□□□□□□□□□□□□; informal group interaction-□ □□□□□□ □□□□□□□□□□□□. Norms, roles, cohesion □□□□□□ behaviour shape □□□□□□□□□□.

Study points

- Distinguish formal and informal groups.
- Explain how norms and cohesion affect performance.

Suggested procedure

1. Observe a team and list purpose, roles, norms, and decision process.

Engineering / workplace application: Project teams, committees, friendship groups, and quality circles show different group purposes.

Illustrative example: A team may work quickly but still need a review role to avoid groupthink.

Common mistake: High cohesion is not automatically good if the group suppresses questions or unsafe ideas.

Handbook treatment

M3.01 — Group behaviour, types, norms and cohesion (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M3.01 — Group behaviour, types, norms and cohesion (3 hours) using the official terminology retained above.
- Organise the important elements of M3.01 — Group behaviour, types, norms and cohesion (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.01 — Group behaviour, types, norms and cohesion (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on M3.01 — Group behaviour, types, norms and cohesion (3 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M3.01 — Group behaviour, types, norms and cohesion (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M3.01 — Group behaviour, types, norms and cohesion (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M3.01 — Group behaviour, types, norms and cohesion (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M3.01 — Group behaviour, types, norms and cohesion (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.01 — Group behaviour, types, norms and cohesion (3 hours)?
- How would you distinguish M3.01 — Group behaviour, types, norms and cohesion (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.01 — Group behaviour, types, norms and cohesion (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.01 — Group behaviour, types, norms and cohesion (3 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M3.01 — Group behaviour, types, norms and cohesion (3 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

M3.02 — Leadership, leader and manager, styles and traits (3 hours)

Concept and explanation

Leadership is the process of influencing people toward a goal. A manager has formal authority and administrative responsibility; a leader may influence with or without formal position. Autocratic, democratic, laissez-faire, transactional, and transformational descriptions help compare styles, but effective choice depends on people and situation.

Malayalam support: Manager-□□ formal authority □□□□□□□□; leader influence formal position □□□□□□□□□□ □□□□□□□□. Style situation □□□□□□□□□□ □□□□□.

Study points

- Compare leader and manager.
- Choose a style for a simple situation and justify it.

Suggested procedure

1. Analyse a leadership case using task, people, time, and risk factors.

Engineering / workplace application: A safety emergency may need clear direction; a creative project may benefit from participation.

Illustrative example: A team can use participative planning and still require a clear accountable decision.

Common mistake: No single style is best for every situation.

Handbook treatment

M3.02 — Leadership, leader and manager, styles and traits (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M3.02 — Leadership, leader and manager, styles and traits (3 hours) using the official terminology retained above.
- Organise the important elements of M3.02 — Leadership, leader and manager, styles and traits (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.02 — Leadership, leader and manager, styles and traits (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on M3.02 — Leadership, leader and manager, styles and traits (3 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M3.02 — Leadership, leader and manager, styles and traits (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M3.02 — Leadership, leader and manager, styles and traits (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M3.02 — Leadership, leader and manager, styles and traits (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M3.02 — Leadership, leader and manager, styles and traits (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.02 — Leadership, leader and manager, styles and traits (3 hours)?
- How would you distinguish M3.02 — Leadership, leader and manager, styles and traits (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.02 — Leadership, leader and manager, styles and traits (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.02 — Leadership, leader and manager, styles and traits (3 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M3.02 — Leadership, leader and manager, styles and traits (3 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. M3.03 — Stress: sources, types, consequences and management (1 hours)

Concept and explanation

Stress is a physical and psychological response to demands perceived as challenging or threatening. Workload, ambiguity, conflict, poor support, and lack of control can contribute. Short-term challenge may energise, while prolonged stress can harm health and performance. Management includes workload review, support, rest, role clarity, and professional help when needed.

Malayalam support: Workload, ambiguity, conflict, poor support □□□□□□ stress □□□□□□□□□□. Long-term stress health-□□□ performance-□□□ □□□□□□□□□□□.

Study points

- Identify workplace stressors without diagnosing a person.
- Suggest organisational and individual support.

Suggested procedure

1. Prepare a stressor–impact–support table for a hypothetical project.

Engineering / workplace application: Clear priorities, realistic schedules, breaks, and supportive supervision reduce avoidable stress.

Illustrative example: A schedule with conflicting deadlines needs priority discussion and resource adjustment.

Common mistake: Telling a stressed person simply to “be stronger” ignores organisational causes.

Handbook treatment

M3.03 — Stress: sources, types, consequences and management (1 hours) must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope M3.03 — Stress: sources, types, consequences and management (1 hours) using the official terminology retained above.
- Organise the important elements of M3.03 — Stress: sources, types, consequences and management (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.03 — Stress: sources, types, consequences and management (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on M3.03 — Stress: sources, types, consequences and management (1 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M3.03 — Stress: sources, types, consequences and management (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, M3.03 — Stress: sources, types, consequences and management (1 hours) is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on M3.03 — Stress: sources, types, consequences and management (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M3.03 — Stress: sources, types, consequences and management (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.03 — Stress: sources, types, consequences and management (1 hours)?
- How would you distinguish M3.03 — Stress: sources, types, consequences and management (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.03 — Stress: sources, types, consequences and management (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.03 — Stress: sources, types, consequences and management (1 hours) incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Malayalam support: M3.03 — Stress: sources, types, consequences and management (1 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

M3.04 — Conflict: sources, types and resolution (1 hours)

Concept and explanation

Conflict occurs when people perceive incompatible interests, goals, values, or resource claims. It may be task, relationship, or process conflict. Avoiding, accommodating, competing, compromising, and collaborating are possible approaches; the suitable response depends on urgency, importance, power, and safety.

> **Malayalam support:** Conflict task, relationship, process □□□□□□□□□□□□□□□□□□□. Collaborate/compromise □□□□□□□□□ approaches context □□□□□□□□□□□ □□□□□□□□□□□□□□□□.

Study points

- Identify issue, interests, options, and agreement.
- Escalate harassment, discrimination, or safety issues through proper channels.

Suggested procedure

1. Use a conflict-resolution dialogue: facts → interests → options → agreement → follow-up.

> **Engineering / workplace application:** Negotiation and structured problem-solving can turn a task conflict into a better process.

> **Illustrative example:** Two team members disputing a deadline need evidence, constraints, and a shared plan.

> **Common mistake:** Treating every conflict as a personality problem prevents resolution of the underlying issue.

Handbook treatment

M3.04 — Conflict: sources, types and resolution (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M3.04 — Conflict: sources, types and resolution (1 hours) using the official terminology retained above.
- Organise the important elements of M3.04 — Conflict: sources, types and resolution (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.04 — Conflict: sources, types and resolution (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Groups, Leadership, Stress and Conflict.
- Write an examination answer on M3.04 — Conflict: sources, types and resolution (1 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M3.04 — Conflict: sources, types and resolution (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M3.04 — Conflict: sources, types and resolution (1 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M3.04 — Conflict: sources, types and resolution (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M3.04 — Conflict: sources, types and resolution (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.04 — Conflict: sources, types and resolution (1 hours)?
- How would you distinguish M3.04 — Conflict: sources, types and resolution (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.04 — Conflict: sources, types and resolution (1 hours), and what must be checked before using it?

Module summary: Healthy groups need clear roles, fair leadership, manageable stress, and constructive conflict processes.

OFFICIAL MODULE 4

Organisational Change and Culture

The final module explains why organisations change, why people resist, and how culture shapes behaviour.

Hours: 6
CO4 · Bloom level: Understanding

Handbook study routine: Complete Module 4 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 4

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

Organizational change - Reasons - Types - change process - resistance to change - Overcoming resistance - Organizational culture - Type of organization culture

Point-by-point study guide

Official syllabus point 1: Organizational change

Exact source point

Syllabus text: Organizational change

How to understand and study it

This point is an official syllabus requirement: “Organizational change”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□ Organizational change □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Organizational change is a decision and coordination topic. Learn the definitions, then connect the planning inputs, method, output, performance measure, and corrective action.

Learning objectives

- Define and scope Organizational change using the official terminology retained above.
- Organise the important elements of Organizational change into a logical sequence, classification, structure, or calculation.
- Connect Organizational change with one engineering decision, operation, measurement, or safety requirement in the context of Organisational Change and Culture.
- Write an examination answer on Organizational change with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Organizational change. It is a study organisation method, not an additional official syllabus requirement.

- Define the management term or objective.
- Identify the resources, constraints, people, information, and time involved.
- Describe the procedure or decision criteria in a logical sequence.
- Measure the result and state how deviations are controlled or improved.

Engineering application lens

Engineering organisations apply Organizational change to deliver safe, economical, reliable, and timely work. A strong answer connects the method to productivity, quality, cost, schedule, customer requirement, compliance, or sustainability as appropriate.

Worked answer method

Given: the project, process, resource, or organisational situation.
Required: plan, comparison, decision, or performance explanation.
Method: state objective → inputs → method → output → measure → corrective action.
Answer: finish with the likely benefit, limitation, and condition for successful implementation.

Exam answer blueprint

For a short-answer question on Organizational change, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Organizational change, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Organizational change?
- How would you distinguish Organizational change from a closely related idea?
- Where would an engineer or technician encounter Organizational change, and what must be checked before using it?
- What common mistake would make an answer or operation involving Organizational change incorrect?

Common mistakes and safety emphasis

- Listing management terms without a sequence or decision criterion.
- Ignoring constraints, measurement, responsibility, or feedback.
- Confusing an objective with an activity or a result with an input.
- Giving a generic benefit without linking it to the engineering situation.

Malayalam support: Organizational change □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□.

Official syllabus point 2: change process

Exact source point

Syllabus text: change process

How to understand and study it

This point is an official syllabus requirement: “change process”. Study the sequence from input or initial condition to operation and final output. Note the role of each named stage and the cause-and-effect relationship. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Write the operating sequence in numbered steps, including the input, intermediate action, and output.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ change process □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

change process is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope change process using the official terminology retained above.
- Organise the important elements of change process into a logical sequence, classification, structure, or calculation.
- Connect change process with one engineering decision, operation, measurement, or safety requirement in the context of Organisational Change and Culture.
- Write an examination answer on change process with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading change process. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of change process is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on change process, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is change process, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining change process?
- How would you distinguish change process from a closely related idea?
- Where would an engineer or technician encounter change process, and what must be checked before using it?
- What common mistake would make an answer or operation involving change process incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Conceptual framework

Use the following frame while reading Organizational culture. It is a study organisation method, not an additional official syllabus requirement.

- Define the management term or objective.
- Identify the resources, constraints, people, information, and time involved.
- Describe the procedure or decision criteria in a logical sequence.
- Measure the result and state how deviations are controlled or improved.

Engineering application lens

Engineering organisations apply Organizational culture to deliver safe, economical, reliable, and timely work. A strong answer connects the method to productivity, quality, cost, schedule, customer requirement, compliance, or sustainability as appropriate.

Worked answer method

Given: the project, process, resource, or organisational situation.
Required: plan, comparison, decision, or performance explanation.
Method: state objective → inputs → method → output → measure → corrective action.
Answer: finish with the likely benefit, limitation, and condition for successful implementation.

Exam answer blueprint

For a short-answer question on Organizational culture, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Organizational culture, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Organizational culture?
- How would you distinguish Organizational culture from a closely related idea?
- Where would an engineer or technician encounter Organizational culture, and what must be checked before using it?
- What common mistake would make an answer or operation involving Organizational culture incorrect?

Common mistakes and safety emphasis

- Listing management terms without a sequence or decision criterion.
- Ignoring constraints, measurement, responsibility, or feedback.
- Confusing an objective with an activity or a result with an input.
- Giving a generic benefit without linking it to the engineering situation.

Malayalam support: Organizational culture □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□.

Official syllabus point 5: Type of organization culture

Exact source point

Syllabus text: Type of organization culture

How to understand and study it

This point is an official syllabus requirement: “Type of organization culture”. Prepare a classification table. For every named type, learn its defining feature, distinguishing point, and one appropriate engineering context. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Prepare a table with type, defining feature, advantage or limitation, and application.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Type of organization culture □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Type of organization culture is a decision and coordination topic. Learn the definitions, then connect the planning inputs, method, output, performance measure, and corrective action.

Learning objectives

- Define and scope Type of organization culture using the official terminology retained above.
- Organise the important elements of Type of organization culture into a logical sequence, classification, structure, or calculation.
- Connect Type of organization culture with one engineering decision, operation, measurement, or safety requirement in the context of Organisational Change and Culture.
- Write an examination answer on Type of organization culture with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Type of organization culture. It is a study organisation method, not an additional official syllabus requirement.

- Define the management term or objective.
- Identify the resources, constraints, people, information, and time involved.
- Describe the procedure or decision criteria in a logical sequence.
- Measure the result and state how deviations are controlled or improved.

Engineering application lens

Engineering organisations apply Type of organization culture to deliver safe, economical, reliable, and timely work. A strong answer connects the method to productivity, quality, cost, schedule, customer requirement, compliance, or sustainability as appropriate.

Worked answer method

Given: the project, process, resource, or organisational situation.
Required: plan, comparison, decision, or performance explanation.
Method: state objective → inputs → method → output → measure → corrective action.
Answer: finish with the likely benefit, limitation, and condition for successful implementation.

Exam answer blueprint

For a short-answer question on Type of organization culture, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Type of organization culture, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Type of organization culture?
- How would you distinguish Type of organization culture from a closely related idea?
- Where would an engineer or technician encounter Type of organization culture, and what must be checked before using it?
- What common mistake would make an answer or operation involving Type of organization culture incorrect?

Common mistakes and safety emphasis

- Listing management terms without a sequence or decision criterion.
- Ignoring constraints, measurement, responsibility, or feedback.
- Confusing an objective with an activity or a result with an input.
- Giving a generic benefit without linking it to the engineering situation.

Malayalam support: Type of organization culture □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□.

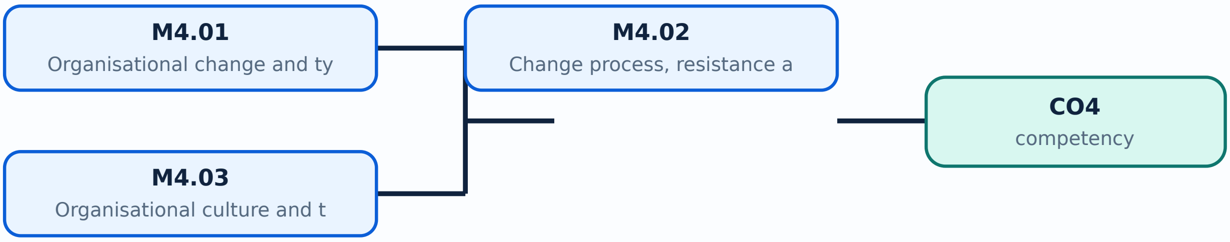
Learning goals

- Explain types and process of organisational change.
- Identify sources of resistance and ways to overcome them.

- Describe organisational culture and its types.

Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.



Learning map for Module module-4: the listed topics build the module competency.

M4.01 — Organisational change and types (2 hours)

Concept and explanation

Organisational change alters strategy, structure, technology, people, processes, or culture. It may be planned or emergent, incremental or transformational, and internal or externally driven. Change should be linked to a reason and evaluated for effects on stakeholders.

Malayalam support: Change strategy, structure, technology, people, process, culture □□□□□□□□□ □□□□; planned/emergent, incremental/transformational □□□ □□□□□□.

Study points

- Classify a change by type.
- Identify affected stakeholders and intended outcome.

Suggested procedure

1. Make a change-impact map for one campus or business change.

Engineering / workplace application: A new information system changes technology, process, roles, skills, and reporting.

Illustrative example: Moving from paper to cloud records requires training, access policy, and workflow redesign.

Common mistake: Calling a technology installation only an IT change misses people and process effects.

Handbook treatment

M4.01 — Organisational change and types (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M4.01 — Organisational change and types (2 hours) using the official terminology retained above.
- Organise the important elements of M4.01 — Organisational change and types (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.01 — Organisational change and types (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Organisational Change and Culture.
- Write an examination answer on M4.01 — Organisational change and types (2 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M4.01 — Organisational change and types (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M4.01 — Organisational change and types (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M4.01 — Organisational change and types (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M4.01 — Organisational change and types (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.01 — Organisational change and types (2 hours)?
- How would you distinguish M4.01 — Organisational change and types (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.01 — Organisational change and types (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.01 — Organisational change and types (2 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M4.01 — Organisational change and types (2 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

M4.02 — Change process, resistance and overcoming resistance (2 hours)

Concept and explanation

Change processes commonly include recognising need, preparing people, implementing, reinforcing, and reviewing. Resistance may arise from fear, loss of status, habit, lack of trust, poor communication, or real technical concerns. Participation, information, training, support, negotiation, and visible leadership can help.

Malayalam support: Resistance fear, habit, trust □□□□□, communication problem □□□□□□□□□ □□□□□□ □□□□. Participation/training/support □□□□□□□□□□.

Study points

- Distinguish legitimate concern from unexamined resistance.
- Plan communication, training, support, and feedback.

Suggested procedure

1. Prepare a five-step change communication plan.

Engineering / workplace application: Pilot testing and user participation increase acceptance of a new process.

Illustrative example: Before a new attendance system, demonstrate it, collect concerns, train users, and review errors.

Common mistake: Forcing change without listening can create hidden workarounds and poor data.

Handbook treatment

M4.02 — Change process, resistance and overcoming resistance (2 hours) must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope M4.02 — Change process, resistance and overcoming resistance (2 hours) using the official terminology retained above.
- Organise the important elements of M4.02 — Change process, resistance and overcoming resistance (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.02 — Change process, resistance and overcoming resistance (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Organisational Change and Culture.
- Write an examination answer on M4.02 — Change process, resistance and overcoming resistance (2 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M4.02 — Change process, resistance and overcoming resistance (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, M4.02 — Change process, resistance and overcoming resistance (2 hours) is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on M4.02 — Change process, resistance and overcoming resistance (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M4.02 — Change process, resistance and overcoming resistance (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.02 — Change process, resistance and overcoming resistance (2 hours)?
- How would you distinguish M4.02 — Change process, resistance and overcoming resistance (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.02 — Change process, resistance and overcoming resistance (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.02 — Change process, resistance and overcoming resistance (2 hours) incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Malayalam support: M4.02 — Change process, resistance and overcoming resistance (2 hours) [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

M4.03 — Organisational culture and types (2 hours)

Concept and explanation

Organisational culture is the shared values, assumptions, symbols, routines, and practices that influence behaviour. Culture may be described as strong or weak, supportive or control-oriented, innovative or conservative, and by other frameworks. Culture is visible in what is rewarded, tolerated, communicated, and repeated.

Malayalam support: Culture shared values, assumptions, routines, symbols □□□□□□□□□□ □□□□□□□□□□□. Reward/tolerance/communication culture □□□□□□□□□□□□□□.

Study points

- Identify visible and invisible culture elements.
- Relate culture to change and ethical behaviour.

Suggested procedure

1. Compare stated values with observed practices in a hypothetical organisation.

Engineering / workplace application: A culture that rewards reporting errors can improve safety and learning.

Illustrative example: If employees are punished for raising problems, the stated open-door culture is not credible.

Common mistake: A colourful office or slogan alone proves a culture; daily practices are stronger evidence.

Handbook treatment

M4.03 — Organisational culture and types (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M4.03 — Organisational culture and types (2 hours) using the official terminology retained above.
- Organise the important elements of M4.03 — Organisational culture and types (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.03 — Organisational culture and types (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Organisational Change and Culture.
- Write an examination answer on M4.03 — Organisational culture and types (2 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M4.03 — Organisational culture and types (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M4.03 — Organisational culture and types (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M4.03 — Organisational culture and types (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M4.03 — Organisational culture and types (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.03 — Organisational culture and types (2 hours)?
- How would you distinguish M4.03 — Organisational culture and types (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.03 — Organisational culture and types (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.03 — Organisational culture and types (2 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M4.03 — Organisational culture and types (2 hours) □□□□ topic □□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□.

Module summary: Change succeeds when culture, communication, capability, participation, and reinforcement support the intended outcome.

Formula and Notation Bank

Formula note: The supplied syllabus is primarily procedural or conceptual and does not prescribe a compulsory numerical formula bank. Focus on the official terminology, sequences, records, and practical demonstrations listed in the modules.

Diagram Library for Rapid Revision

Official Activities and Practical Requirements

Official activities / self-learning

- Observe a manager’s role in a college or workplace activity.
- Prepare a chart comparing Taylor, Fayol, Mayo, and modern management views.

- Complete a personality, perception, motivation, conflict, leadership, and communication reflection using non-sensitive examples.
- Maintain a short organisational-change and culture case notebook.

Practical requirements / equipment

- No separate equipment list is stated in the supplied legacy syllabus.

Assessment Methodology

Official assessment information is reproduced below from the supplied syllabus.

- The legacy syllabus specifies a 2-hour Series Examination, Series Test I, and Series Test II. It does not state a separate CIE/ESE mark distribution; this limitation is preserved.
- The source PDF does not print an explicit REV2021 or REV2026 label. It is placed in the root legacy `lessons/` directory and marked as legacy format rather than silently claiming a printed revision.

Module-wise Questions and Answers

module-1 — Organisation, Managers and Cognitive Functions

1. Explain Organisation, managers, roles and skills. **[3 marks]**

An organisation is a coordinated group working toward shared objectives. Managers plan, organise, lead, and control resources while performing interpersonal, informational, and decisional roles. Technical, human, and conceptual skills become more important in different managerial contexts.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

2. Explain Organisational Behaviour: definition, need and disciplines. **[3 marks]**

Organisational Behaviour studies behaviour at work: how individuals and groups act in organisations and how structure and processes influence behaviour. Psychology, sociology, social psychology, anthropology, and political science contribute concepts. OB helps explain, predict, and influence behaviour ethically.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

3. Explain Cognitive functions: intelligence, creativity, problem solving and learning. [3 marks]

Cognitive functions influence how people receive, interpret, remember, and use information. Intelligence is not one simple measure; creativity generates alternatives; problem solving defines a gap and evaluates options; learning changes knowledge or behaviour through experience and feedback.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

module-2 — Individual Behaviour and Motivation

4. Explain Individual behaviour and individual differences. [3 marks]

Individual behaviour is influenced by ability, personality, perception, attitudes, values, emotions, experience, and context. People may respond differently to the same work situation. Managers should use fair, job-related evidence rather than stereotypes.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

5. Explain Perception and factors affecting perception. [3 marks]

Perception is the process of selecting, organising, and interpreting information. Factors include the perceiver, target, situation, attention, prior experience, expectations, and context. Selective perception, stereotyping, halo effect, and attribution errors can distort judgement.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

6. Explain Personality: determinants and types. **[3 marks]**

Personality is a relatively stable pattern of thoughts, feelings, and behaviour. Heredity, environment, culture, family, and situation contribute. Types or trait models can support communication awareness, but should not be used to label people rigidly or deny opportunity.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

7. Explain Motivation and Maslow, Herzberg and McGregor. **[3 marks]**

Motivation is the force that directs, energises, and sustains behaviour. Maslow presents a hierarchy of needs; Herzberg distinguishes hygiene factors from motivators; McGregor contrasts assumptions about people in Theory X and Theory Y. These are frameworks, not universal laws.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

module-3 — Groups, Leadership, Stress and Conflict

8. Explain Group behaviour, types, norms and cohesion. **[3 marks]**

A group contains interacting members with a shared relationship or purpose. Formal groups are created by the organisation; informal groups arise from social interaction. Norms guide behaviour, roles distribute expectations, and cohesion reflects attraction and commitment. Cohesion can help performance but may also produce groupthink.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

9. Explain Leadership, leader and manager, styles and traits. **[3 marks]**

Leadership is the process of influencing people toward a goal. A manager has formal authority and administrative responsibility; a leader may influence with or without formal position. Autocratic, democratic, laissez-faire, transactional, and transformational descriptions help compare styles, but effective choice depends on people and situation.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

10. Explain Stress: sources, types, consequences and management. **[3 marks]**

Stress is a physical and psychological response to demands perceived as challenging or threatening. Workload, ambiguity, conflict, poor support, and lack of control can contribute. Short-term challenge may energise, while prolonged stress can harm health and performance. Management includes workload review, support, rest, role clarity, and professional help when needed.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

11. Explain Conflict: sources, types and resolution. **[3 marks]**

Conflict occurs when people perceive incompatible interests, goals, values, or resource claims. It may be task, relationship, or process conflict. Avoiding, accommodating, competing, compromising, and collaborating are possible approaches; the suitable response depends on urgency, importance, power, and safety.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

module-4 — Organisational Change and Culture

12. Explain Organisational change and types. **[3 marks]**

Organisational change alters strategy, structure, technology, people, processes, or culture. It may be planned or emergent, incremental or transformational, and internal or externally driven. Change should be linked to a reason and evaluated for effects on stakeholders.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

13. Explain Change process, resistance and overcoming resistance. **[3 marks]**

Change processes commonly include recognising need, preparing people, implementing, reinforcing, and reviewing. Resistance may arise from fear, loss of status, habit, lack of trust, poor communication, or real technical concerns. Participation, information, training, support, negotiation, and visible leadership can help.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

14. Explain Organisational culture and types. [3 marks]

Organisational culture is the shared values, assumptions, symbols, routines, and practices that influence behaviour. Culture may be described as strong or weak, supportive or control-oriented, innovative or conservative, and by other frameworks. Culture is visible in what is rewarded, tolerated, communicated, and repeated.

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

Practice Model Question Paper

Practice Model Paper — Not an Official Examination Paper

This paper is generated from the supplied module coverage for revision and does not claim to reproduce the official examination pattern.

1. **1.** Define or explain *Organisation, managers, roles and skills* with one relevant application. (5 marks)
2. **2.** Define or explain *Organisational Behaviour: definition, need and disciplines* with one relevant application. (5 marks)
3. **3.** Define or explain *Individual behaviour and individual differences* with one relevant application. (5 marks)
4. **4.** Define or explain *Perception and factors affecting perception* with one relevant application. (5 marks)
5. **5.** Define or explain *Group behaviour, types, norms and cohesion* with one relevant application. (5 marks)
6. **6.** Define or explain *Leadership, leader and manager, styles and traits* with one relevant application. (5 marks)

7. **7.** Define or explain *Organisational change and types* with one relevant application. (5 marks)
8. **8.** Define or explain *Change process, resistance and overcoming resistance* with one relevant application. (5 marks)

Writing advice: Use headings, standard terminology, and labelled diagrams or procedures where relevant.

Quick Revision

Module-wise key points

- **Organisation, Managers and Cognitive Functions:** Organisational behaviour begins with the organisation, managerial role, and cognitive processes that shape work.
- **Individual Behaviour and Motivation:** Individual behaviour is understood more fairly when perception, personality, motivation, and evidence are considered together.
- **Groups, Leadership, Stress and Conflict:** Healthy groups need clear roles, fair leadership, manageable stress, and constructive conflict processes.
- **Organisational Change and Culture:** Change succeeds when culture, communication, capability, participation, and reinforcement support the intended outcome.

Exam checklist

- Write the official terminology before adding explanation.
- Use a labelled diagram or step sequence when it improves the answer.
- Check conditions, boundaries, safety, hygiene, and documentation points.
- Separate official syllabus information from your own example.

Last-minute revision: Review the coverage table, formula bank, diagram library, and common-mistake notes inside every topic.

Glossary

Technical glossary

Term	Short meaning
Organisation, managers, roles and skills	An organisation is a coordinated group working toward shared objectives. Managers plan, organise, lead, and control resources while performing interpersonal, informational, and decisional roles. Technical, human, and conceptual skills become more important in
Organisational Behaviour: definition, need and disciplines	Organisational Behaviour studies behaviour at work: how individuals and groups act in organisations and how structure and processes influence behaviour. Psychology, sociology, social psychology, anthropology, and political science contribute concepts. OB helps
Cognitive functions: intelligence, creativity, problem solving and learning	Cognitive functions influence how people receive, interpret, remember, and use information. Intelligence is not one simple measure; creativity generates alternatives; problem solving defines a gap and evaluates options; learning changes knowledge or behaviour
Individual behaviour and individual differences	Individual behaviour is influenced by ability, personality, perception, attitudes, values, emotions, experience, and context. People may respond differently to the same work situation. Managers should use fair, job-related evidence rather than stereotypes.

Group behaviour, types, norms and cohesion	A group contains interacting members with a shared relationship or purpose. Formal groups are created by the organisation; informal groups arise from social interaction. Norms guide behaviour, roles distribute expectations, and cohesion reflects attraction and
Leadership, leader and manager, styles and traits	Leadership is the process of influencing people toward a goal. A manager has formal authority and administrative responsibility; a leader may influence with or without formal position. Autocratic, democratic, laissez-faire, transactional, and transformational
Stress: sources, types, consequences and management	Stress is a physical and psychological response to demands perceived as challenging or threatening. Workload, ambiguity, conflict, poor support, and lack of control can contribute. Short-term challenge may energise, while prolonged stress can harm health and p
Conflict: sources, types and resolution	Conflict occurs when people perceive incompatible interests, goals, values, or resource claims. It may be task, relationship, or process conflict. Avoiding,

Term	Short meaning
	accommodating, competing, compromising, and collaborating are possible approaches; the suitable respons
Organisational change and types	Organisational change alters strategy, structure, technology, people, processes, or culture. It may be planned or emergent, incremental or transformational, and internal or externally driven. Change should be linked to a reason and evaluated for effects on sta
Change process, resistance and overcoming resistance	Change processes commonly include recognising need, preparing people, implementing, reinforcing, and reviewing. Resistance may arise from fear, loss of status, habit, lack of trust, poor communication, or real technical concerns. Participation, information, tr
Organisational culture and types	Organisational culture is the shared values, assumptions, symbols, routines, and practices that influence behaviour. Culture may be described as strong or weak, supportive or control-oriented, innovative or conservative, and by other frameworks. Culture is vis
