KERALA DIPLOMA CURRICULUM REVISION 2026

Course 5463A | 5 Credits: 4 | Program Elective | Source-grounded

Safety in Construction and Textile

● To understand the safety issues unique to the construction and textile industries.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTR syllabus PDF for Course 5463A is the authoritative source for course information, objectives, course outcomes, CO–PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5463A.pdf from the uploaded official SITTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Course information

Item	Official information
Programme	Diploma in Fire Technology and Safety
Course code	5463A
Course title	Safety in Construction and Textile
Semester	5 Credits: 4
Course category	Program Elective

Item	Official information
Periods per week	4 (L:4 T:0 P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

21 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD

How to use this lesson

First pass

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- ● To understand the safety issues unique to the construction and textile industries.
- ● To identify and mitigate ergonomic risks, equipment hazards, and environmental risks
- within these industries.
- ● To introduce relevant regulations, standards, and legal frameworks for ensuring safety
- in construction.
- ● To equip students with knowledge about specific safety practices for various
- construction operations and textile industry hazards.
- ● To understand the roles of stakeholders in promoting safety and preventing accidents
- in construction and textile industries.

Course outcomes

CO	Official outcome	Study level
CO1	13 Understanding and textile industries. Identify and apply safety measures for various	See official syllabus
CO2	16 Applying construction operations and materials. Analyze hazards in construction sites and textile	See official syllabus
CO3	manufacturing units and suggest control measures. 15 Analyzing Understand relevant Indian standards, legal	See official syllabus
CO4	14 frameworks, and welfare provisions for construction Understanding workers.	See official syllabus

CO–PO mapping evidence

Row	Extracted official mapping

Row	Extracted official mapping

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	industries.	6	As specified
Module 2	and materials.	5	As specified
Module 3	and suggest control measures	5	As specified
Module 4	Understand relevant Indian standards, legal frameworks, and welfare	5	As specified

MODULE 1

industries.

This module is presented from the official syllabus scope for Safety in Construction and Textile. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.

- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: industries.
- Official duration: As specified
- Official topic entries captured: 6
- The full source excerpt is preserved below for coverage checking.

2 Understanding safety issues.

2 Understanding safety issues. is an official topic in Module 1 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding safety issues. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding safety issues. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 2 Understanding safety issues. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-[illegible] 2 Understanding safety issues. [illegible] [illegible] definition/meaning [illegible]. [illegible] [illegible] [illegible], steps, application [illegible] [illegible] [illegible]. Technical terms English-[illegible] [illegible] [illegible].

Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers,

Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers, is an official topic in Module 1 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers, using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, human factors in construction safety management. 2 understanding roles of stakeholders (management, workers, should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers, means in the official course context

3 Understanding safety challenges. Construction Safety Issues: Overview of construction hazards and safety regulations., Identifying and addressing common construction-related risks such as falls, machinery accidents, electrical hazards, and exposure to hazardous materials. Human Factors in Safety Management: Recognizing human errors and minimizing risks through training, awareness, and design of safe systems, Understanding psychological aspects and behaviors that affect safety. Stakeholders' Role: Understanding how each participant (management, workers, contractors, government) contributes to safety in construction, Roles of supervisors, safety officers, and unions in promoting a safety culture. Ergonomics in Construction: Identifying ergonomic risks such as improper lifting techniques, awkward postures, and improper tool design, Suggesting corrective actions like the use of assistive devices, ergonomic tools, and promoting worker training. Safety in the Textile Industry: Concepts and Significance: Introduction to textile industry operations and common safety challenges. Overview of textile manufacturing processes (spinning, weaving, dyeing, finishing) and related hazards. Common Hazards in the Textile Industry: Mechanical Hazards: Moving parts in machines, risk of entanglement, and injuries related to textile machinery like looms and spinning frames. Fire Hazards: Flammable fibers, lint accumulation, and the risk of fire and explosions. Chemical Hazards: Exposure to hazardous chemicals like dyes, solvents, and finishing agents, leading to skin, respiratory, and eye problems. Ergonomic Risks: Repetitive strain injuries from tasks such as sewing, weaving, or operating machinery for long periods. Safety Challenges in Textile Industry: Addressing the risks associated with machine guarding, fire prevention, and chemical exposure. Implementing engineering controls, personal protective equipment (PPE), and good housekeeping practices. Training workers on safe operating procedures, first aid, and emergency protocols in case of chemical spills, fires, or accidents. Identify and apply safety measures for various construction operations

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 2

and materials.

This module is presented from the official syllabus scope for Safety in Construction and Textile. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: and materials.
- Official duration: As specified
- Official topic entries captured: 5
- The full source excerpt is preserved below for coverage checking.

4 Applying foundations, excavation, and piling. Safety during the construction of walls, roofs, and

4 Applying foundations, excavation, and piling. Safety during the construction of walls, roofs, and is an official topic in Module 2 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Applying foundations, excavation, and piling. Safety during the construction of walls, roofs, and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 applying foundations, excavation, and piling. safety during the construction of walls, roofs, and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare

3 Applying structural frames.

3 Applying structural frames. is an official topic in Module 2 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Applying structural frames. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 applying structural frames. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Applying structural frames. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2-□□ 3 Applying structural frames. □□□□□□□□□□□□□ □□□□□ definition/meaning □□□□□□□□□□□□□□. □□□□□□□ □□□□□□□ □□□□□□□□, steps, application □□□□□□□ □□□□□□□□□□ □□□□□□□. Technical terms English-□ □□□□□□ □□□□□□□□□□□□□.

3 Applying Safety during the erection of structural steel work and concrete framed structures.

3 Applying Safety during the erection of structural steel work and concrete framed structures. is an official topic in Module 2 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Applying Safety during the erection of structural steel work and concrete framed structures. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 applying safety during the erection of structural steel work and concrete framed structures. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify provisions. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, provisions. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What provisions. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4-□□ provisions. □□□□□□□□□□□□ □□□□□ definition/meaning □□□□□□□□□□□□□. □□□□□□ □□□□□□ □□□□□□□, steps, application □□□□□□ □□□□□□□□□ □□□□□□. Technical terms English-□ □□□□□ □□□□□□□□□□□□.

The Contract Labour (R&A) Act and Central Rules 3 Applying – Registration, licensing, welfare. The BOCW Act and welfare provisions –

The Contract Labour (R&A) Act and Central Rules 3 Applying – Registration, licensing, welfare. The BOCW Act and welfare provisions – is an official topic in Module 4 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify The Contract Labour (R&A) Act and Central Rules 3 Applying – Registration, licensing, welfare. The BOCW Act and welfare provisions – using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, the contract labour (r&a) act and central rules 3 applying – registration, licensing, welfare. the bocw act and welfare provisions – should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Contents: Welfare Provisions and Legal Framework for Construction Workers

Worker Welfare: The minimum facilities required for construction workers,
```

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

RAPID REFERENCE

Concept and formula bank

Answer structure

```
Definition → Principle → Components/steps → Application → Conclusion
```

Use this sequence for descriptive questions when the topic does not require a numerical formula.

Practical record

```
Aim → Apparatus → Procedure → Observation → Result → Safety
```

Use this sequence for laboratory, workshop and field activities.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

Define or explain 2 Understanding safety issues.. (3 marks)

Answer: Begin with the standard definition or identity of *2 Understanding safety issues.*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□ □□□□□□□□□□□ □□□□□□□.

Define or explain Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers,. (3 marks)

Answer: Begin with the standard definition or identity of *Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers,*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□ □□□□□□□□□□□ □□□□□□□.

Define or explain 2 Applying government, contractors) in ensuring safety. Framing of contract conditions on safety and. (3 marks)

Answer: Begin with the standard definition or identity of *2 Applying government, contractors) in ensuring safety. Framing of contract conditions on safety and*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□ □□□□□□□□□□□ □□□□□□□.

Define or explain 2 Understanding safety-related matters. Ergonomic risks in construction – identification. (3 marks)

Answer: Begin with the standard definition or identity of *2 Understanding safety-related matters. Ergonomic risks in construction – identification*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□ □□□□□□□□□□ □□□□□□□.

Module 2

Define or explain 4 Applying foundations, excavation, and piling. Safety during the construction of walls, roofs, and. (3 marks)

Answer: Begin with the standard definition or identity of *4 Applying foundations, excavation, and piling. Safety during the construction of walls, roofs, and*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□ □□□□□□□□□□ □□□□□□□.

Define or explain 3 Applying structural frames.. (3 marks)

Answer: Begin with the standard definition or identity of *3 Applying structural frames.*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□ □□□□□□□□□□ □□□□□□□.

Define or explain 3 Applying Safety during the erection of structural steel work and concrete framed structures.. (3 marks)

Answer: Begin with the standard definition or identity of *3 Applying Safety during the erection of structural steel work and concrete framed structures.*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□ □□□□□□□□□□ □□□□□□□.

Define or explain 3 Applying Safety in construction of temporary structures, including scaffolding and shoring.. (3 marks)

Answer: Begin with the standard definition or identity of *3 Applying Safety in construction of temporary structures, including scaffolding and shoring.*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□ □□□□□□□□□□ □□□□□□□.

Module 3

Define or explain 3 Applying construction materials. Safety in the use of construction equipment –. (3 marks)

Answer: Begin with the standard definition or identity of *3 Applying construction materials. Safety in the use of construction equipment –*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□ □□□□□□□□□□ □□□□□□□.

Define or explain 3 Applying hoists, lifts, and cranes. Hazards in construction sites – electrical, fire,. (3 marks)

Answer: Begin with the standard definition or identity of *3 Applying hoists, lifts, and cranes. Hazards in construction sites – electrical, fire,*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□ □□□□□□.

Define or explain 3 Analyzing and chemical hazards. Health hazards at construction sites – physical,. (3 marks)

Answer: Begin with the standard definition or identity of *3 Analyzing and chemical hazards. Health hazards at construction sites – physical,*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□ □□□□□□.

Define or explain 3 Analyzing psychological, and biological. Safety in construction vehicle/machinery. (3 marks)

Answer: Begin with the standard definition or identity of *3 Analyzing psychological, and biological. Safety in construction vehicle/machinery*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□ □□□□□□.

Module 4

Define or explain 2 Understanding and welfare. Site selection, minimum facilities, and sanitary. (3 marks)

Answer: Begin with the standard definition or identity of *2 Understanding and welfare. Site selection, minimum facilities, and sanitary*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□□ □□□□□□□□□□ □□□□□□□.

Define or explain provisions.. (3 marks)

Answer: Begin with the standard definition or identity of *provisions.*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□□ □□□□□□□□□□ □□□□□□□.

Define or explain The Contract Labour (R&A) Act and Central Rules 3 Applying – Registration, licensing, welfare. The BOCW Act and welfare provisions –. (3 marks)

Answer: Begin with the standard definition or identity of *The Contract Labour (R&A) Act and Central Rules 3 Applying – Registration, licensing, welfare. The BOCW Act and welfare provisions –*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□□ □□□□□□ definition, □□□□□□□ principle/steps, □□□□□□□ application □□□□□ □□□□□□□□□□ □□□□□□□.

Define or explain 3 Understanding Penalties, wages, and legal protections. Legal frameworks regarding construction safety –. (3 marks)

Answer: Begin with the standard definition or identity of *3 Understanding Penalties, wages, and legal protections. Legal frameworks regarding construction safety –*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

> **Malayalam support:** □ □□□□□□□□□□□ □□□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□ □□□□□□.

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **2 Understanding safety issues.**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **4 Applying foundations, excavation, and piling. Safety during the construction of walls, roofs, and**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **3 Applying construction materials. Safety in the use of construction equipment –**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 4

1-mark definition: State the meaning of **2 Understanding and welfare. Site selection, minimum facilities, and sanitary**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
