Module hours listed: 43

Official Source Declaration

This lesson uses the supplied official syllabus PDF as the authoritative source for course information, revision, modules, topics, objectives, Course Outcomes, assessment information, official activities, practical requirements, and references.

Source handling: Official wording and numerical values are retained wherever supplied. Educational explanations, Malayalam support, examples, diagrams, and revision questions are added as study support and are not presented as additional official requirements.

Transparency note: Official assessment information is reproduced below from the supplied syllabus. Any limitation in the supplied PDF is not silently corrected.

How to Study This Lesson

Recommended sequence

1. Begin with the official source declaration and course dashboard.
2. Study each module in the official order and keep the coverage table as a checklist.
3. Open every topic, understand the example or procedure, and write your own short answer.
4. Use the revision section, glossary, questions, and practice paper after completing the modules.

Study principle: Keep English technical terminology, symbols, units, and official assessment wording unchanged in examination answers. Use the Malayalam support blocks only as a bridge to understanding.

Handbook method: Do not treat a topic as completed after reading its heading. For every topic card, complete the learning objectives, follow the conceptual framework, write the worked answer method, and answer the self-check questions. This creates a study record that is useful for class learning and examination preparation.

Module-hour and outcome mapping

No.	Module	Official hours	Relevant CO / level
1	Bank reconciliation and company data management	10	CO1

No.	Module	Official hours	Relevant CO / level
2	Duties, taxes and GST	14	CO2
3	Payroll processing	10	CO3
4	TDS, stock and pricing	9	CO4

Prerequisites

- Basic knowledge in Tally — Computerized Financial Accounting-I, Semester 5.

How to study this lesson

1. Read the module introduction and learning goals.
2. Open every topic and reproduce its example, sequence, or procedure.
3. Use Malayalam support as a bridge; retain English technical terms for examinations.
4. Attempt the module questions without looking at the answers.

Objectives, Course Outcomes and CO–PO Information

Official course objectives

1. To provide hands-on experience in Computerized Financial Accounting using Tally.
2. To familiarize students with bank reconciliation statement, goods and service tax, tax deducted at source and payroll processing in Tally software.

Course Outcomes

1. Construct bank reconciliation statement in Tally.
2. Solve problems of duties and taxes and Goods and Service Tax.
3. Construct payroll statement.
4. Make use of tax deducted at source, stock and pricing.

CO-PO mapping as supplied

CO1→PO2=3; CO2→PO3=3; CO3→PO2=3 and PO4=3; CO4→PO1=3.
Legend: 3-Strongly mapped, 2-Moderately mapped, 1-Weakly mapped.

Complete Syllabus Coverage

Official syllabus point-by-point coverage

This audit layer maps every official source block to the corresponding lesson module. The source transcript is retained verbatim as extracted from the supplied syllabus; the study guidance below is educational support and is not presented as additional official syllabus content. No official point is intentionally omitted.

Source-to-lesson coverage map

Module	Lesson topic cards	Source basis	Official point units
Module 1	3	Official Contents block	8
Module 2	4	Official Contents block	12
Module 3	3	Official Contents block	9
Module 4	4	Official Contents block	6

Use this checklist to confirm that every official module topic is represented in the lesson.

Complete official topic coverage checklist

Module	Topic code	Topic	Hours
module-1	M1.01	Bank reconciliation statement and Tally audit features	2
module-1	M1.02	Preparation of bank reconciliation statement	5
module-1	M1.03	Company backup and restore functions	3
module-2	M2.01	Duties and taxes	1
module-2	M2.02	Goods and Service Tax concept	3
module-2	M2.03	GST registration and rates	1
module-2	M2.04	GST problems and reports	9

Module	Topic code	Topic	Hours
module-3	M3.01	Payroll concept and basic terms	1
module-3	M3.02	Payroll heads, attendance and vouchers	4
module-3	M3.03	Payroll statement and statutory reports	5
module-4	M4.01	Tax deducted at source concept	1
module-4	M4.02	Expense ledgers and TDS vouchers	2
module-4	M4.03	TDS problems	5
module-4	M4.04	Stock valuation in Tally	1

Learning Roadmap

1. Bank reconciliation and company data management
CO1 · 10 hours

2. Duties, taxes and GST
CO2 · 14 hours

3. Payroll processing
CO3 · 10 hours

4. TDS, stock and pricing
CO4 · 9 hours

The roadmap follows the order of the supplied syllabus.

OFFICIAL MODULE 1

Bank reconciliation and company data management

This module uses Tally to reconcile bank-book entries, investigate differences and protect company data.

Hours: 10
CO1 · Bloom level: Applying

Handbook study routine: Complete Module 1 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words.

Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 1

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

Point-by-point study guide

Official syllabus point 1: Bank reconciliation statement

Exact source point

Syllabus text: Bank reconciliation statement

How to understand and study it

This point is an official syllabus requirement: “Bank reconciliation statement”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□ Bank reconciliation statement □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Bank reconciliation statement is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Bank reconciliation statement using the official terminology retained above.
- Organise the important elements of Bank reconciliation statement into a logical sequence, classification, structure, or calculation.
- Connect Bank reconciliation statement with one engineering decision, operation, measurement, or safety requirement in the context of Bank reconciliation and company data management.
- Write an examination answer on Bank reconciliation statement with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Bank reconciliation statement. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Bank reconciliation statement is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Bank reconciliation statement, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Bank reconciliation statement, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Bank reconciliation statement?
- How would you distinguish Bank reconciliation statement from a closely related idea?
- Where would an engineer or technician encounter Bank reconciliation statement, and what must be checked before using it?
- What common mistake would make an answer or operation involving Bank reconciliation statement incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Bank reconciliation statement [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

Official syllabus point 2: computation

Exact source point

Syllabus text: computation

How to understand and study it

This point is an official syllabus requirement: “computation”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ computation □□□□ technical terms English-□□□□□□□□ □□□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

computation is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope computation using the official terminology retained above.
- Organise the important elements of computation into a logical sequence, classification, structure, or calculation.
- Connect computation with one engineering decision, operation, measurement, or safety requirement in the context of Bank reconciliation and company data management.
- Write an examination answer on computation with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading computation. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of computation is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on computation, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is computation, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining computation?
- How would you distinguish computation from a closely related idea?
- Where would an engineer or technician encounter computation, and what must be checked before using it?
- What common mistake would make an answer or operation involving computation incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: computation [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

Official syllabus point 3: bank book balance

Exact source point

Syllabus text: bank book balance

How to understand and study it

This point is an official syllabus requirement: “bank book balance”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ bank book balance □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

bank book balance is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope bank book balance using the official terminology retained above.
- Organise the important elements of bank book balance into a logical sequence, classification, structure, or calculation.
- Connect bank book balance with one engineering decision, operation, measurement, or safety requirement in the context of Bank reconciliation and company data management.
- Write an examination answer on bank book balance with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading bank book balance. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of bank book balance is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on bank book balance, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is bank book balance, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining bank book balance?
- How would you distinguish bank book balance from a closely related idea?
- Where would an engineer or technician encounter bank book balance, and what must be checked before using it?
- What common mistake would make an answer or operation involving bank book balance incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: bank book balance [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

Official syllabus point 4: backup and restore

Exact source point

Syllabus text: backup and restore

How to understand and study it

This point is an official syllabus requirement: “backup and restore”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ backup, restore □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

backup and restore is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope backup and restore using the official terminology retained above.
- Organise the important elements of backup and restore into a logical sequence, classification, structure, or calculation.
- Connect backup and restore with one engineering decision, operation, measurement, or safety requirement in the context of Bank reconciliation and company data management.
- Write an examination answer on backup and restore with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading backup and restore. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of backup and restore is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on backup and restore, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is backup and restore, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining backup and restore?
- How would you distinguish backup and restore from a closely related idea?
- Where would an engineer or technician encounter backup and restore, and what must be checked before using it?
- What common mistake would make an answer or operation involving backup and restore incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: backup and restore [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

Official syllabus point 5: export and import

Exact source point

> **Syllabus text:** export and import

How to understand and study it

This point is an official syllabus requirement: “export and import”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

> **Malayalam support:** □ syllabus point □□□□□□□□□□□□ export, import □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

> **Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

export and import is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope export and import using the official terminology retained above.
- Organise the important elements of export and import into a logical sequence, classification, structure, or calculation.
- Connect export and import with one engineering decision, operation, measurement, or safety requirement in the context of Bank reconciliation and company data management.
- Write an examination answer on export and import with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading export and import. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of export and import is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on export and import, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is export and import, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining export and import?
- How would you distinguish export and import from a closely related idea?
- Where would an engineer or technician encounter export and import, and what must be checked before using it?
- What common mistake would make an answer or operation involving export and import incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: export and import □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. Official syllabus point 6: settings

Exact source point

Syllabus text: settings

How to understand and study it

This point is an official syllabus requirement: “settings”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ settings □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

settings is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope settings using the official terminology retained above.
- Organise the important elements of settings into a logical sequence, classification, structure, or calculation.
- Connect settings with one engineering decision, operation, measurement, or safety requirement in the context of Bank reconciliation and company data management.
- Write an examination answer on settings with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading settings. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of settings is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on settings, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is settings, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining settings?
- How would you distinguish settings from a closely related idea?
- Where would an engineer or technician encounter settings, and what must be checked before using it?
- What common mistake would make an answer or operation involving settings incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: settings [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

Official syllabus point 7: data location

Exact source point

Syllabus text: data location

How to understand and study it

This point is an official syllabus requirement: “data location”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ data location □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

data location is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope data location using the official terminology retained above.
- Organise the important elements of data location into a logical sequence, classification, structure, or calculation.
- Connect data location with one engineering decision, operation, measurement, or safety requirement in the context of Bank reconciliation and company data management.
- Write an examination answer on data location with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading data location. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of data location is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on data location, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is data location, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining data location?
- How would you distinguish data location from a closely related idea?
- Where would an engineer or technician encounter data location, and what must be checked before using it?
- What common mistake would make an answer or operation involving data location incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: data location [illegible] topic [illegible] [illegible] exact technical term [illegible]. Module study tip

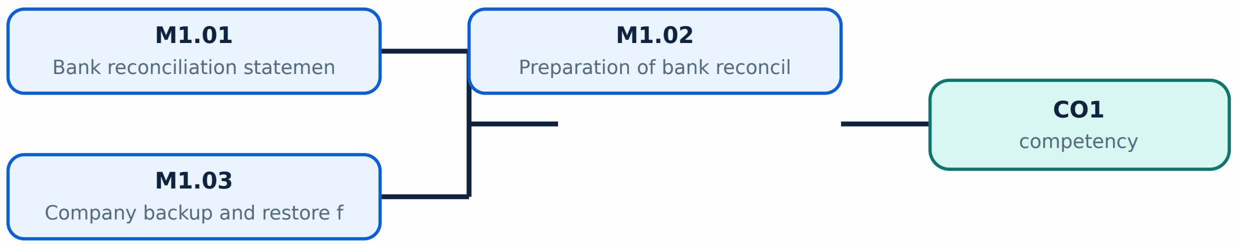
Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.



Learning map for Module module-1: the listed topics build the module competency.

M1.01 — Bank reconciliation statement and Tally audit features (2 hours)

Concept and explanation

<p>Official scope. The syllabus specifies Bank reconciliation statement and Tally audit features. The corresponding study scope is: Interpret bank reconciliation statement and Tally audit features; understand buttons, computation and bank-book balance.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Bank reconciliation statement and Tally audit features</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Bank reconciliation statement and Tally audit features is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

> **Malayalam support:** Malayalam support: Bank reconciliation statement and Tally audit features □□□□ topic □□□□□□□□□□□ □□□□□ □□□□□□□ meaning □□□□□□□□□□ purpose □□□□□□□□□□□□□. □□□□□□ □□□□□□ steps, components □□□□□□□□□□ variables, □□□□□□ application, limitation, safety check □□□□□□ □□□□□□□□ □□□□□□□□. Standard technical terms English-□ □□□□□ □□□□□□□□□□□.

Study points

- Define Bank reconciliation statement and Tally audit features using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: Bank reconciliation statement and Tally audit features is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for Bank reconciliation statement and Tally audit features under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for Bank reconciliation statement and Tally audit features without explaining their order, purpose, or engineering consequence.

Handbook treatment

M1.01 — Bank reconciliation statement and Tally audit features (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M1.01 — Bank reconciliation statement and Tally audit features (2 hours) using the official terminology retained above.
- Organise the important elements of M1.01 — Bank reconciliation statement and Tally audit features (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.01 — Bank reconciliation statement and Tally audit features (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Bank reconciliation and company data management.
- Write an examination answer on M1.01 — Bank reconciliation statement and Tally audit features (2 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M1.01 — Bank reconciliation statement and Tally audit features (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M1.01 — Bank reconciliation statement and Tally audit features (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M1.01 — Bank reconciliation statement and Tally audit features (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M1.01 — Bank reconciliation statement and Tally audit features (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.01 — Bank reconciliation statement and Tally audit features (2 hours)?
- How would you distinguish M1.01 — Bank reconciliation statement and Tally audit features (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.01 — Bank reconciliation statement and Tally audit features (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.01 — Bank reconciliation statement and Tally audit features (2 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: M1.01 — Bank reconciliation statement and Tally audit features (2 hours) □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

> **Malayalam support:** Malayalam support: Company backup and restore functions □□□□ topic □□□□□□□□□□□ □□□□□ □□□□□□□ meaning □□□□□□□□□□ purpose □□□□□□□□□□□□□□. □□□□□□ □□□□□□ steps, components □□□□□□□□□□ variables, □□□□□□ application, limitation, safety check □□□□□□ □□□□□□□□ □□□□□□□□. Standard technical terms English-□ □□□□□ □□□□□□□□□□□.

Study points

- Define Company backup and restore functions using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: Company backup and restore functions is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for Company backup and restore functions under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for Company backup and restore functions without explaining their order, purpose, or engineering consequence.

Handbook treatment

M1.03 — Company backup and restore functions (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M1.03 — Company backup and restore functions (3 hours) using the official terminology retained above.
- Organise the important elements of M1.03 — Company backup and restore functions (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.03 — Company backup and restore functions (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Bank reconciliation and company data management.
- Write an examination answer on M1.03 — Company backup and restore functions (3 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M1.03 — Company backup and restore functions (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M1.03 — Company backup and restore functions (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M1.03 — Company backup and restore functions (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M1.03 — Company backup and restore functions (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.03 — Company backup and restore functions (3 hours)?
- How would you distinguish M1.03 — Company backup and restore functions (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.03 — Company backup and restore functions (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.03 — Company backup and restore functions (3 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Module summary: A reconciliation is complete only when the difference is explained and the final balance is documented.

OFFICIAL MODULE 2

Duties, taxes and GST

This module introduces indirect taxation concepts and their operational treatment in Tally.

Hours: 14
CO2 · Bloom level: Applying

Handbook study routine: Complete Module 2 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 2

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:
Duties and taxes - Methods of Duties and taxes in TALLY- GST-meaning- subsuming of taxes- benefits of GST-GST Council - Structure of GST – CGST, SGST, UTGST & IGST -GSTN - functions - HSN Code – SAC code- Scope of Supply -Time and value of supply of goods - Time of supply of services- Place of supply - GST ledgers - GST registration –
GST rates - procedures involved – CGST ledgers and calculations – SGST ledgers and calculations - solving problems regarding GST – Cess calculations - GST reports – Return printing.

Point-by-point study guide

Official syllabus point 1: Duties and taxes

Exact source point

Syllabus text: Duties and taxes

How to understand and study it

This point is an official syllabus requirement: “Duties and taxes”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Duties □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Duties and taxes is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Duties and taxes using the official terminology retained above.
- Organise the important elements of Duties and taxes into a logical sequence, classification, structure, or calculation.
- Connect Duties and taxes with one engineering decision, operation, measurement, or safety requirement in the context of Duties, taxes and GST.
- Write an examination answer on Duties and taxes with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Duties and taxes. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Duties and taxes is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Duties and taxes, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Duties and taxes, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Duties and taxes?
- How would you distinguish Duties and taxes from a closely related idea?
- Where would an engineer or technician encounter Duties and taxes, and what must be checked before using it?
- What common mistake would make an answer or operation involving Duties and taxes incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Official syllabus point 3: Structure of GST – CGST, SGST, UTGST & IGST -GSTN

Exact source point

> **Syllabus text:** Structure of GST – CGST, SGST, UTGST & IGST -GSTN

How to understand and study it

This point is an official syllabus requirement: “Structure of GST – CGST, SGST, UTGST & IGST -GSTN”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

> **Malayalam support:** □ syllabus point □□□□□□□□□□□□ Structure of GST – CGST, UTGST & IGST -GSTN □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

> **Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Structure of GST – CGST, SGST, UTGST & IGST -GSTN should be studied by linking structure, property, process, and application. The important question is why a material or process gives a particular behaviour and where that behaviour is useful or limiting.

Learning objectives

- Define and scope Structure of GST – CGST, SGST, UTGST & IGST -GSTN using the official terminology retained above.
- Organise the important elements of Structure of GST – CGST, SGST, UTGST & IGST -GSTN into a logical sequence, classification, structure, or calculation.
- Connect Structure of GST – CGST, SGST, UTGST & IGST -GSTN with one engineering decision, operation, measurement, or safety requirement in the context of Duties, taxes and GST.
- Write an examination answer on Structure of GST – CGST, SGST, UTGST & IGST -GSTN with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Structure of GST – CGST, SGST, UTGST & IGST -GSTN. It is a study organisation method, not an additional official syllabus requirement.

- Identify the material, process, property, or defect named in the topic.
- Explain the relevant structure or mechanism at the level expected in the syllabus.
- Relate the mechanism to strength, hardness, conductivity, corrosion, manufacturability, durability, or another stated property.
- Finish with selection criteria, application, limitation, and safety or quality consideration.

Engineering application lens

In engineering practice, Structure of GST – CGST, SGST, UTGST & IGST -GSTN affects selection, manufacturing quality, service life, inspection, and maintenance. A technically useful answer links the observed property or defect to its cause and then to the method used to control or exploit it.

Worked answer method

Given: the material, process, property, or service condition in the question.
Required: explanation, comparison, selection, or identification of the relevant mechanism.
Method: state the principle; connect cause to property; compare alternatives using the same criteria; mention the relevant test or control.
Answer: give the conclusion with the application and the principal limitation.

Exam answer blueprint

For a short-answer question on Structure of GST – CGST, SGST, UTGST & IGST -GSTN, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Structure of GST – CGST, SGST, UTGST & IGST -GSTN, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Structure of GST – CGST, SGST, UTGST & IGST -GSTN?
- How would you distinguish Structure of GST – CGST, SGST, UTGST & IGST -GSTN from a closely related idea?
- Where would an engineer or technician encounter Structure of GST – CGST, SGST, UTGST & IGST -GSTN, and what must be checked before using it?
- What common mistake would make an answer or operation involving Structure of GST – CGST, SGST, UTGST & IGST -GSTN incorrect?

Common mistakes and safety emphasis

- Memorising a property without its unit, condition, or engineering meaning.
- Confusing a manufacturing process with a material property.
- Giving a comparison with different criteria for different materials.
- Ignoring defects, surface condition, heat treatment, environment, or quality control.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

functions is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope functions using the official terminology retained above.
- Organise the important elements of functions into a logical sequence, classification, structure, or calculation.
- Connect functions with one engineering decision, operation, measurement, or safety requirement in the context of Duties, taxes and GST.
- Write an examination answer on functions with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading functions. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of functions is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on functions, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is functions, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining functions?
- How would you distinguish functions from a closely related idea?
- Where would an engineer or technician encounter functions, and what must be checked before using it?
- What common mistake would make an answer or operation involving functions incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: functions □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. Official syllabus point 5: HSN Code – SAC code- Scope of Supply -Time and value of supply of goods

Exact source point

> **Syllabus text:** HSN Code – SAC code- Scope of Supply -Time and value of supply of goods

How to understand and study it

This point is an official syllabus requirement: “HSN Code – SAC code- Scope of Supply -Time and value of supply of goods”. Record the relevant quantity, symbol, unit, relation or formula, and the interpretation of the result. Do not memorise a number without its unit and condition. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Practise one small input-output example and test at least one boundary or fault condition.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

> **Malayalam support:** □ syllabus point □□□□□□□□□□□□ HSN Code – SAC code- Scope of Supply -Time, value of supply of goods □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

> **Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

HSN Code – SAC code- Scope of Supply -Time and value of supply of goods must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope HSN Code – SAC code- Scope of Supply -Time and value of supply of goods using the official terminology retained above.
- Organise the important elements of HSN Code – SAC code- Scope of Supply -Time and value of supply of goods into a logical sequence, classification, structure, or calculation.
- Connect HSN Code – SAC code- Scope of Supply -Time and value of supply of goods with one engineering decision, operation, measurement, or safety requirement in the context of Duties, taxes and GST.
- Write an examination answer on HSN Code – SAC code- Scope of Supply -Time and value of supply of goods with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading HSN Code – SAC code- Scope of Supply -Time and value of supply of goods. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, HSN Code – SAC code- Scope of Supply -Time and value of supply of goods is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on HSN Code – SAC code- Scope of Supply -Time and value of supply of goods, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is HSN Code – SAC code- Scope of Supply -Time and value of supply of goods, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining HSN Code – SAC code- Scope of Supply -Time and value of supply of goods?
- How would you distinguish HSN Code – SAC code- Scope of Supply -Time and value of supply of goods from a closely related idea?
- Where would an engineer or technician encounter HSN Code – SAC code- Scope of Supply -Time and value of supply of goods, and what must be checked before using it?
- What common mistake would make an answer or operation involving HSN Code – SAC code- Scope of Supply -Time and value of supply of goods incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Handbook treatment

Time of supply of services- Place of supply is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Time of supply of services- Place of supply using the official terminology retained above.
- Organise the important elements of Time of supply of services- Place of supply into a logical sequence, classification, structure, or calculation.
- Connect Time of supply of services- Place of supply with one engineering decision, operation, measurement, or safety requirement in the context of Duties, taxes and GST.
- Write an examination answer on Time of supply of services- Place of supply with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Time of supply of services- Place of supply. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Time of supply of services- Place of supply is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Time of supply of services- Place of supply, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Time of supply of services- Place of supply, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Time of supply of services- Place of supply?
- How would you distinguish Time of supply of services- Place of supply from a closely related idea?
- Where would an engineer or technician encounter Time of supply of services- Place of supply, and what must be checked before using it?
- What common mistake would make an answer or operation involving Time of supply of services- Place of supply incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Official syllabus point 7: GST ledgers

Exact source point

Syllabus text: GST ledgers

How to understand and study it

This point is an official syllabus requirement: “GST ledgers”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ GST ledgers □□□□ technical terms English-□□□□□□□□ □□□□□□□□. □□□□□□ definition □□□□□□□□□□□ principle □□□□□□□□□□□□□□; □□□□□ □□□□ term-□□□□□ function, difference, application □□□□□□□ □□□□□□□□□□□ □□□□□□□. Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

procedures involved – CGST ledgers and calculations – SGST ledgers and calculations must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope procedures involved – CGST ledgers and calculations – SGST ledgers and calculations using the official terminology retained above.
- Organise the important elements of procedures involved – CGST ledgers and calculations – SGST ledgers and calculations into a logical sequence, classification, structure, or calculation.
- Connect procedures involved – CGST ledgers and calculations – SGST ledgers and calculations with one engineering decision, operation, measurement, or safety requirement in the context of Duties, taxes and GST.
- Write an examination answer on procedures involved – CGST ledgers and calculations – SGST ledgers and calculations with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading procedures involved – CGST ledgers and calculations – SGST ledgers and calculations. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, procedures involved – CGST ledgers and calculations – SGST ledgers and calculations is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on procedures involved – CGST ledgers and calculations – SGST ledgers and calculations, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is procedures involved – CGST ledgers and calculations – SGST ledgers and calculations, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining procedures involved – CGST ledgers and calculations – SGST ledgers and calculations?
- How would you distinguish procedures involved – CGST ledgers and calculations – SGST ledgers and calculations from a closely related idea?

- Where would an engineer or technician encounter GST reports – Return printing., and what must be checked before using it?
- What common mistake would make an answer or operation involving GST reports – Return printing. incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

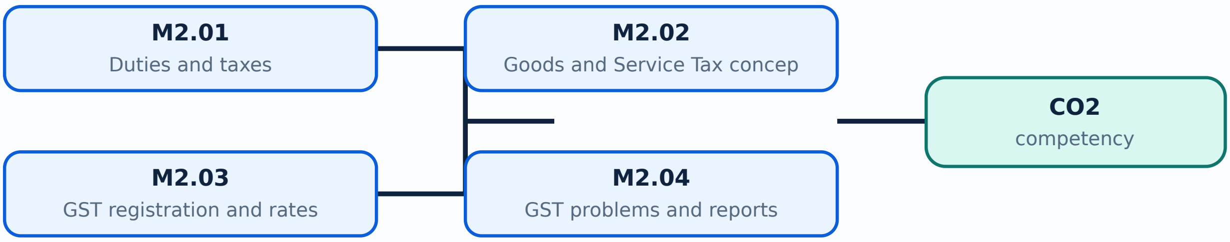
Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.



Learning map for Module module-2: the listed topics build the module competency.

M2.01 — Duties and taxes (1 hours)

Concept and explanation

<p>Official scope. The syllabus specifies Duties and taxes. The corresponding study scope is: Identify duties and taxes and methods of duties and taxes. </p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Duties and taxes</caption><thead><tr><th>Aspect</th><th>Expected learning</th> </tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr> <th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Duties and taxes is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table> </div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

> **Malayalam support:** Malayalam support: Duties and taxes □□□□ topic □□□□□□□□□□□ □□□□□ □□□□□□□ meaning □□□□□□□□□□ purpose □□□□□□□□□□□□□. □□□□□□ □□□□□□ steps, components □□□□□□□□□□ variables, □□□□□□ application, limitation, safety check □□□□□□ □□□□□□□□ □□□□□□□□. Standard technical terms English-□ □□□□□ □□□□□□□□□□□□.

Study points

- Define Duties and taxes using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: Duties and taxes is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for Duties and taxes under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for Duties and taxes without explaining their order, purpose, or engineering consequence.

Handbook treatment

M2.01 — Duties and taxes (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M2.01 — Duties and taxes (1 hours) using the official terminology retained above.
- Organise the important elements of M2.01 — Duties and taxes (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.01 — Duties and taxes (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Duties, taxes and GST.
- Write an examination answer on M2.01 — Duties and taxes (1 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.01 — Duties and taxes (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M2.01 — Duties and taxes (1 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M2.01 — Duties and taxes (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.01 — Duties and taxes (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.01 — Duties and taxes (1 hours)?
- How would you distinguish M2.01 — Duties and taxes (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.01 — Duties and taxes (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.01 — Duties and taxes (1 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Study points

- Define Goods and Service Tax concept using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: Goods and Service Tax concept is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for Goods and Service Tax concept under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for Goods and Service Tax concept without explaining their order, purpose, or engineering consequence.

Handbook treatment

M2.02 — Goods and Service Tax concept (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M2.02 — Goods and Service Tax concept (3 hours) using the official terminology retained above.
- Organise the important elements of M2.02 — Goods and Service Tax concept (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.02 — Goods and Service Tax concept (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Duties, taxes and GST.
- Write an examination answer on M2.02 — Goods and Service Tax concept (3 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.02 — Goods and Service Tax concept (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M2.02 — Goods and Service Tax concept (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M2.02 — Goods and Service Tax concept (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.02 — Goods and Service Tax concept (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.02 — Goods and Service Tax concept (3 hours)?
- How would you distinguish M2.02 — Goods and Service Tax concept (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.02 — Goods and Service Tax concept (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.02 — Goods and Service Tax concept (3 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work. </p>

> **Malayalam support:** Malayalam support: GST problems and reports □□□□ topic □□□□□□□□□□□□ □□□□□ □□□□□□□ meaning □□□□□□□□□□ purpose □□□□□□□□□□□□□. □□□□□□ □□□□□□ steps, components □□□□□□□□□□ variables, □□□□□□ application, limitation, safety check □□□□□□ □□□□□□□□ □□□□□□□□. Standard technical terms English-□ □□□□□ □□□□□□□□□□□.

Study points

- Define GST problems and reports using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: GST problems and reports is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for GST problems and reports under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for GST problems and reports without explaining their order, purpose, or engineering consequence.

Handbook treatment

M2.04 — GST problems and reports (9 hours) must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope M2.04 — GST problems and reports (9 hours) using the official terminology retained above.
- Organise the important elements of M2.04 — GST problems and reports (9 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.04 — GST problems and reports (9 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Duties, taxes and GST.
- Write an examination answer on M2.04 — GST problems and reports (9 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M2.04 — GST problems and reports (9 hours). It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, M2.04 — GST problems and reports (9 hours) is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on M2.04 — GST problems and reports (9 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M2.04 — GST problems and reports (9 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.04 — GST problems and reports (9 hours)?
- How would you distinguish M2.04 — GST problems and reports (9 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.04 — GST problems and reports (9 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.04 — GST problems and reports (9 hours) incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Malayalam support: M2.04 — GST problems and reports (9 hours) □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. Module summary: Tax calculations must distinguish the tax type, taxable value, rate, ledger and reporting period.

OFFICIAL MODULE 3

Payroll processing

This module models payroll from employee attendance and pay-head setup to statements and statutory reports.

Hours: 10
CO3 · Bloom level: Applying

Handbook study routine: Complete Module 3 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 3

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:
Pay roll - pay heads - basic terms - features setting - attendance creation - pay head creation
- pay roll vouchers - preparation of pay roll statement - pay roll statutory reports.

Point-by-point study guide

Official syllabus point 1: Pay roll

Exact source point

Syllabus text: Pay roll

How to understand and study it

This point is an official syllabus requirement: “Pay roll”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ Pay roll □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

Pay roll is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope Pay roll using the official terminology retained above.
- Organise the important elements of Pay roll into a logical sequence, classification, structure, or calculation.
- Connect Pay roll with one engineering decision, operation, measurement, or safety requirement in the context of Payroll processing.
- Write an examination answer on Pay roll with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading Pay roll. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of Pay roll is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on Pay roll, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is Pay roll, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Pay roll?
- How would you distinguish Pay roll from a closely related idea?
- Where would an engineer or technician encounter Pay roll, and what must be checked before using it?
- What common mistake would make an answer or operation involving Pay roll incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: Pay roll □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. English terminology, symbols, units, diagram labels □□□□□□ □□□□□□□□□. Exam answer □□□□□□□□□□ concept-□□□□ □□□□□–□□□ □□□□□ □□□□□□□□□□□□□□.

Official syllabus point 2: pay heads

Exact source point

> **Syllabus text:** pay heads

How to understand and study it

This point is an official syllabus requirement: “pay heads”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

> **Malayalam support:** □ syllabus point □□□□□□□□□□□□ pay heads □□□□ technical terms English-□□□□□□□□ □□□□□□□□. □□□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□□ □□□□□□□□□□□ □□□□□□□. Diagram, sequence, formula, unit □□□□□□□ □□□□□□□□□□□ □□□□□□ □□□□□□□□ revision □□□□□□□□.

> **Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

pay heads is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope pay heads using the official terminology retained above.
- Organise the important elements of pay heads into a logical sequence, classification, structure, or calculation.
- Connect pay heads with one engineering decision, operation, measurement, or safety requirement in the context of Payroll processing.
- Write an examination answer on pay heads with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading pay heads. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.

Exact source point

Syllabus text: preparation of pay roll statement

How to understand and study it

This point is an official syllabus requirement: “preparation of pay roll statement”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ preparation of pay roll statement □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

preparation of pay roll statement is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope preparation of pay roll statement using the official terminology retained above.
- Organise the important elements of preparation of pay roll statement into a logical sequence, classification, structure, or calculation.
- Connect preparation of pay roll statement with one engineering decision, operation, measurement, or safety requirement in the context of Payroll processing.
- Write an examination answer on preparation of pay roll statement with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading preparation of pay roll statement. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of preparation of pay roll statement is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on preparation of pay roll statement, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is preparation of pay roll statement, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining preparation of pay roll statement?
- How would you distinguish preparation of pay roll statement from a closely related idea?
- Where would an engineer or technician encounter preparation of pay roll statement, and what must be checked before using it?
- What common mistake would make an answer or operation involving preparation of pay roll statement incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: preparation of pay roll statement [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. English terminology, symbols, units, diagram labels [illegible] [illegible]. Exam answer [illegible] concept-[illegible] [illegible]–[illegible] [illegible] [illegible].

Official syllabus point 9: pay roll statutory reports.

Exact source point

Syllabus text: pay roll statutory reports.

How to understand and study it

This point is an official syllabus requirement: “pay roll statutory reports.”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ pay roll statutory reports. □□□□□ technical terms English-□□□□□□□□ □□□□□□□□. □□□□□□ definition □□□□□□□□□□□ principle □□□□□□□□□□□□□□; □□□□□ □□□□ term-□□□□□ function, difference, application □□□□□□□ □□□□□□□□□□□ □□□□□□□. Diagram, sequence, formula, unit □□□□□□□ □□□□□□□□□□□□ □□□□□□ □□□□□□□□ revision □□□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

pay roll statutory reports. is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope pay roll statutory reports. using the official terminology retained above.
- Organise the important elements of pay roll statutory reports. into a logical sequence, classification, structure, or calculation.
- Connect pay roll statutory reports. with one engineering decision, operation, measurement, or safety requirement in the context of Payroll processing.
- Write an examination answer on pay roll statutory reports. with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading pay roll statutory reports.. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of pay roll statutory reports. is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on pay roll statutory reports., begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is pay roll statutory reports., and what is its scope in this module?

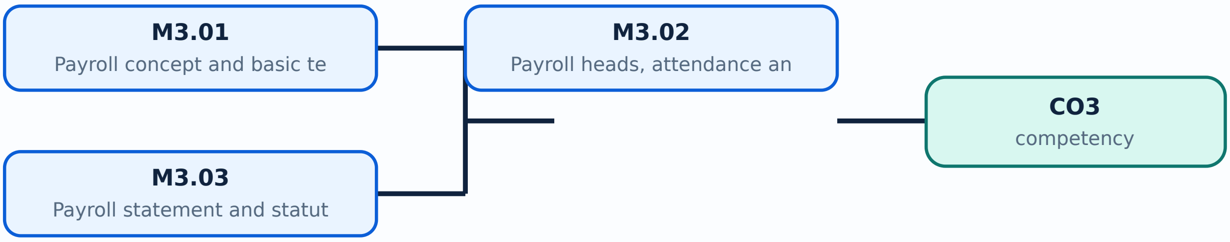
Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.



Learning map for Module module-3: the listed topics build the module competency.

M3.01 — Payroll concept and basic terms (1 hours)

Concept and explanation

<p>Official scope. The syllabus specifies Payroll concept and basic terms. The corresponding study scope is: Explain payroll, pay heads, basic terms and payroll features.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Payroll concept and basic terms</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr> <th>Application</th><td>Payroll concept and basic terms is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

> **Malayalam support:** Malayalam support: Payroll concept and basic terms □□□□ topic □□□□□□□□□□□□ □□□□□ □□□□□□□ meaning □□□□□□□□□□ purpose □□□□□□□□□□□□□. □□□□□□ □□□□□□ steps, components □□□□□□□□□□ variables, □□□□□□ application, limitation, safety check □□□□□□ □□□□□□□□ □□□□□□□□. Standard technical terms English-□ □□□□□ □□□□□□□□□□□□□.

Study points

- Define Payroll concept and basic terms using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: Payroll concept and basic terms is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for Payroll concept and basic terms under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for Payroll concept and basic terms without explaining their order, purpose, or engineering consequence.

Handbook treatment

M3.01 — Payroll concept and basic terms (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M3.01 — Payroll concept and basic terms (1 hours) using the official terminology retained above.
- Organise the important elements of M3.01 — Payroll concept and basic terms (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.01 — Payroll concept and basic terms (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Payroll processing.
- Write an examination answer on M3.01 — Payroll concept and basic terms (1 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M3.01 — Payroll concept and basic terms (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M3.01 — Payroll concept and basic terms (1 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M3.01 — Payroll concept and basic terms (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M3.01 — Payroll concept and basic terms (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.01 — Payroll concept and basic terms (1 hours)?
- How would you distinguish M3.01 — Payroll concept and basic terms (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.01 — Payroll concept and basic terms (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.01 — Payroll concept and basic terms (1 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Study points

- Define Payroll statement and statutory reports using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: Payroll statement and statutory reports is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for Payroll statement and statutory reports under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for Payroll statement and statutory reports without explaining their order, purpose, or engineering consequence.

Handbook treatment

M3.03 — Payroll statement and statutory reports (5 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M3.03 — Payroll statement and statutory reports (5 hours) using the official terminology retained above.
- Organise the important elements of M3.03 — Payroll statement and statutory reports (5 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.03 — Payroll statement and statutory reports (5 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Payroll processing.
- Write an examination answer on M3.03 — Payroll statement and statutory reports (5 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M3.03 — Payroll statement and statutory reports (5 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M3.03 — Payroll statement and statutory reports (5 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M3.03 — Payroll statement and statutory reports (5 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M3.03 — Payroll statement and statutory reports (5 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.03 — Payroll statement and statutory reports (5 hours)?
- How would you distinguish M3.03 — Payroll statement and statutory reports (5 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.03 — Payroll statement and statutory reports (5 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.03 — Payroll statement and statutory reports (5 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

OFFICIAL MODULE 4

TDS, stock and pricing

This module applies Tally to tax deducted at source and stock valuation.

Hours: 9
CO4 · Bloom level: Applying

Handbook study routine: Complete Module 4 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

Official source coverage for Module 4

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

ts:
TDS - concept - terms - features settings - TDS calculations - TDS ledgers - TDS vouchers -procedures involved and solving problems regarding tax deducted at source - stock features
- valuation.

Point-by-point study guide

Official syllabus point 1: features settings

Exact source point

Syllabus text: features settings

How to understand and study it

This point is an official syllabus requirement: “features settings”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ features settings □□□□ technical terms English-□□□□□□□ □□□□□□□. □□□□□ definition □□□□□□□□□□ principle □□□□□□□□□□□□□; □□□□ □□□ term-□□□□ function, difference, application □□□□□□ □□□□□□□□□□ □□□□□□. Diagram, sequence, formula, unit □□□□□□ □□□□□□□□□□ □□□□□ □□□□□□□ revision □□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

features settings is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope features settings using the official terminology retained above.
- Organise the important elements of features settings into a logical sequence, classification, structure, or calculation.
- Connect features settings with one engineering decision, operation, measurement, or safety requirement in the context of TDS, stock and pricing.
- Write an examination answer on features settings with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading features settings. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of features settings is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on features settings, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is features settings, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining features settings?
- How would you distinguish features settings from a closely related idea?
- Where would an engineer or technician encounter features settings, and what must be checked before using it?
- What common mistake would make an answer or operation involving features settings incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Malayalam support: features settings [illegible] topic [illegible] [illegible] exact technical term [illegible]. [illegible] definition [illegible] principle, named parts/steps, application, limitation [illegible] [illegible] [illegible]. Official syllabus point 2: TDS calculations

Exact source point

Syllabus text: TDS calculations

How to understand and study it

This point is an official syllabus requirement: “TDS calculations”. Record the relevant quantity, symbol, unit, relation or formula, and the interpretation of the result. Do not memorise a number without its unit and condition. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Record the symbol, SI unit, governing relation, and one correctly labelled calculation.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

Malayalam support: □ syllabus point □□□□□□□□□□□□ TDS calculations □□□□ technical terms English-□□□□□□□□ □□□□□□□□. □□□□□□ definition □□□□□□□□□□□ principle □□□□□□□□□□□□□□; □□□□□ □□□□ term-□□□□□ function, difference, application □□□□□□□ □□□□□□□□□□□ □□□□□□□. Diagram, sequence, formula, unit □□□□□□□ □□□□□□□□□□□□ □□□□□□ □□□□□□□□ revision □□□□□□□□.

Exam focus: Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

Handbook treatment

TDS calculations must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope TDS calculations using the official terminology retained above.
- Organise the important elements of TDS calculations into a logical sequence, classification, structure, or calculation.
- Connect TDS calculations with one engineering decision, operation, measurement, or safety requirement in the context of TDS, stock and pricing.
- Write an examination answer on TDS calculations with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading TDS calculations. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, TDS calculations is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on TDS calculations, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is TDS calculations, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining TDS calculations?
- How would you distinguish TDS calculations from a closely related idea?
- Where would an engineer or technician encounter TDS calculations, and what must be checked before using it?
- What common mistake would make an answer or operation involving TDS calculations incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Malayalam support: TDS calculations □□□□ topic □□□□□□□□□□□□ □□□□□ exact technical term □□□□□□□□□□□□□. □□□□ definition □□□□□□□□□□ principle, named parts/steps, application, limitation □□□□□□ □□□□□□□□ □□□□□□□□. Module study tip

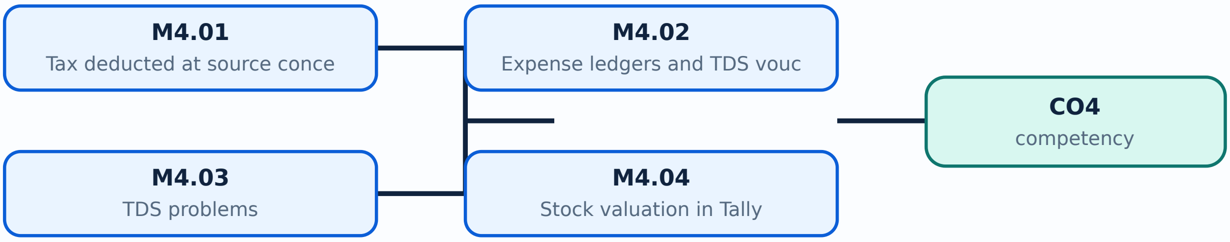
Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.



Learning map for Module module-4: the listed topics build the module competency.

M4.01 — Tax deducted at source concept **(1 hours)**

Concept and explanation

<p>Official scope. The syllabus specifies Tax deducted at source concept. The corresponding study scope is: Explain TDS, terms and feature settings. </p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Tax deducted at source concept</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Tax deducted at source concept is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Malayalam support: Malayalam support: Tax deducted at source concept □□□□ topic □□□□□□□□□□□□ □□□□□ □□□□□□□ meaning □□□□□□□□□□ purpose □□□□□□□□□□□□□. □□□□□□ □□□□□□ steps, components □□□□□□□□□□ variables, □□□□□□ application, limitation, safety check □□□□□□ □□□□□□□□ □□□□□□□□. Standard technical terms English-□ □□□□□ □□□□□□□□□□□.

Study points

- Define Tax deducted at source concept using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: Tax deducted at source concept is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for Tax deducted at source concept under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for Tax deducted at source concept without explaining their order, purpose, or engineering consequence.

Handbook treatment

M4.01 — Tax deducted at source concept (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M4.01 — Tax deducted at source concept (1 hours) using the official terminology retained above.
- Organise the important elements of M4.01 — Tax deducted at source concept (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.01 — Tax deducted at source concept (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of TDS, stock and pricing.
- Write an examination answer on M4.01 — Tax deducted at source concept (1 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M4.01 — Tax deducted at source concept (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M4.01 — Tax deducted at source concept (1 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M4.01 — Tax deducted at source concept (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M4.01 — Tax deducted at source concept (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.01 — Tax deducted at source concept (1 hours)?
- How would you distinguish M4.01 — Tax deducted at source concept (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.01 — Tax deducted at source concept (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.01 — Tax deducted at source concept (1 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

> **Malayalam support:** Malayalam support: TDS problems □□□□ topic □□□□□□□□□□□□ □□□□□ □□□□□□□ meaning □□□□□□□□□□ purpose □□□□□□□□□□□□□. □□□□□□ □□□□□□ steps, components □□□□□□□□□□ variables, □□□□□□ application, limitation, safety check □□□□□□ □□□□□□□□ □□□□□□□□. Standard technical terms English-□ □□□□□ □□□□□□□□□□□□.

Study points

- Define TDS problems using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: TDS problems is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for TDS problems under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for TDS problems without explaining their order, purpose, or engineering consequence.

Handbook treatment

M4.03 — TDS problems (5 hours) must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

Learning objectives

- Define and scope M4.03 — TDS problems (5 hours) using the official terminology retained above.
- Organise the important elements of M4.03 — TDS problems (5 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.03 — TDS problems (5 hours) with one engineering decision, operation, measurement, or safety requirement in the context of TDS, stock and pricing.
- Write an examination answer on M4.03 — TDS problems (5 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M4.03 — TDS problems (5 hours). It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

Engineering application lens

In an engineering setting, M4.03 — TDS problems (5 hours) is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

Worked answer method

Given: the quantities and conditions stated in the question.
Required: the unknown quantity, including its unit.
Calculation: write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.
Answer: report the result with a suitable number of significant figures and one sentence of interpretation.

Exam answer blueprint

For a short-answer question on M4.03 — TDS problems (5 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M4.03 — TDS problems (5 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.03 — TDS problems (5 hours)?
- How would you distinguish M4.03 — TDS problems (5 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.03 — TDS problems (5 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.03 — TDS problems (5 hours) incorrect?

Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

> **Malayalam support:** Malayalam support: Stock valuation in Tally □□□□ topic □□□□□□□□□□□□ □□□□□ □□□□□□□ meaning □□□□□□□□□□ purpose □□□□□□□□□□□□□. □□□□□□ □□□□□□ steps, components □□□□□□□□□□ variables, □□□□□□ application, limitation, safety check □□□□□□ □□□□□□□□ □□□□□□□□. Standard technical terms English-□ □□□□□ □□□□□□□□□□□□.

Study points

- Define Stock valuation in Tally using the official syllabus wording.
- Explain the sequence, relationship, calculation, or document procedure before listing details.
- Use a labelled diagram, table, formula, unit, or operating condition wherever it improves the answer.
- Connect the topic to an appropriate application and state one limitation, verification point, or common error.

Engineering / workplace application: Stock valuation in Tally is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.

Illustrative example: Revision task: Prepare a four-column note for Stock valuation in Tally under the headings purpose, principle/procedure, important parameters, and application/limitation. Check every term in the official scope before moving to the next topic.

Common mistake: A common mistake is to reproduce isolated points for Stock valuation in Tally without explaining their order, purpose, or engineering consequence.

Handbook treatment

M4.04 — Stock valuation in Tally (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

Learning objectives

- Define and scope M4.04 — Stock valuation in Tally (1 hours) using the official terminology retained above.
- Organise the important elements of M4.04 — Stock valuation in Tally (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.04 — Stock valuation in Tally (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of TDS, stock and pricing.
- Write an examination answer on M4.04 — Stock valuation in Tally (1 hours) with a clear opening, technical middle, and final application or limitation.

Conceptual framework

Use the following frame while reading M4.04 — Stock valuation in Tally (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

Engineering application lens

The engineering value of M4.04 — Stock valuation in Tally (1 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

Worked answer method

Given: the topic, operating condition, diagram, data, or situation stated in the question.
Required: definition, explanation, comparison, procedure, calculation, or application as requested.
Method: organise the answer under principle, named elements, sequence or relationship, and application.
Answer: use the requested technical terms, units, labels, assumptions, and a concluding statement.

Exam answer blueprint

For a short-answer question on M4.04 — Stock valuation in Tally (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

Self-check questions

- What is M4.04 — Stock valuation in Tally (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.04 — Stock valuation in Tally (1 hours)?
- How would you distinguish M4.04 — Stock valuation in Tally (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.04 — Stock valuation in Tally (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.04 — Stock valuation in Tally (1 hours) incorrect?

Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

Formula and Notation Bank

Formula note: The supplied syllabus is primarily procedural or conceptual and does not prescribe a compulsory numerical formula bank. Focus on the official terminology, sequences, records, and practical demonstrations listed in the modules.

Diagram Library for Rapid Revision

Open the module to view its labelled learning-map diagram.

Module 2: Duties, taxes and

Open the module to view its labelled learning-map diagram.

Module 3: Payroll

Open the module to view its labelled learning-map diagram.

Module 4: TDS, stock and

Open the module to view its labelled learning-map diagram.

Official Activities and Practical Requirements

Official activities / self-learning

- Create a practice company, enter representative transactions, reconcile bank data, configure GST/payroll/TDS, generate reports, and retain an audit trail without using personal financial data.

Practical requirements / equipment

- Computer laboratory with Tally software or the syllabus-prescribed accounting package; sample company data; printer or report-export facility.

Assessment Methodology

Official assessment information is reproduced below from the supplied syllabus.

- The supplied PDF lists Series Test entries, but it does not provide a complete official CIE/ESE mark distribution or a complete question-paper pattern.
- Series Test – I is listed in the supplied syllabus; the PDF does not provide a complete mark distribution for this entry.
- Series Test – II is listed in the supplied syllabus; the PDF does not provide a complete mark distribution for this entry.
- The practice model paper in this lesson is a study aid and is explicitly not an official examination paper.

Module-wise Questions and Answers

module-1 — Bank reconciliation and company data management

1. Explain Bank reconciliation statement and Tally audit features. **[3 marks]**

<p>Official scope. The syllabus specifies Bank reconciliation statement and Tally audit features. The corresponding study scope is: Interpret bank reconciliation statement and Tally audit features; understand buttons, computation and bank-book balance.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result →

limitation.</p> <div class="table-wrap"><table><caption>Study frame for Bank reconciliation statement and Tally audit features</caption><thead><tr><th>Aspect</th> <th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr> <th>Application</th><td>Bank reconciliation statement and Tally audit features is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work. </p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

2. Explain Preparation of bank reconciliation statement. **[3 marks]**

<p>Official scope. The syllabus specifies Preparation of bank reconciliation statement. The corresponding study scope is: Prepare bank reconciliation statement in Tally.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Preparation of bank reconciliation statement</caption><thead><tr><th>Aspect</th> <th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr> <th>Application</th><td>Preparation of bank reconciliation statement is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work. </p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

3. Explain Company backup and restore functions. [3 marks]

<p>Official scope. The syllabus specifies Company backup and restore functions. The corresponding study scope is: Utilize company backup and restore; use export/import, settings and data-location controls.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

module-2 — Duties, taxes and GST

4. Explain Duties and taxes. [3 marks]

<p>Official scope. The syllabus specifies Duties and taxes. The corresponding study scope is: Identify duties and taxes and methods of duties and taxes.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div

class="table-wrap"><table><caption>Study frame for Duties and taxes</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Duties and taxes is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

5. Explain Goods and Service Tax concept. **[3 marks]**

<p>Official scope. The syllabus specifies Goods and Service Tax concept. The corresponding study scope is: Explain GST, subsuming of taxes, benefits, GST Council, structure, CGST, SGST, UTGST, IGST and GSTN.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Goods and Service Tax concept</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Goods and Service Tax concept is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

6. Explain GST registration and rates. **[3 marks]**

<p>Official scope. The syllabus specifies GST registration and rates. The corresponding study scope is: Summarize GST registrations, rates, HSN/SAC, scope, time/value/place of supply and procedures.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for GST registration and rates</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>GST registration and rates is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

7. Explain GST problems and reports. **[3 marks]**

<p>Official scope. The syllabus specifies GST problems and reports. The corresponding study scope is: Solve GST problems including CGST/SGST ledgers and calculations, cess, GST reports and return printing.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for GST problems and reports</caption>

<thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>GST problems and reports is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

module-3 — Payroll processing

8. Explain Payroll concept and basic terms. **[3 marks]**

<p>Official scope. The syllabus specifies Payroll concept and basic terms. The corresponding study scope is: Explain payroll, pay heads, basic terms and payroll features.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Payroll concept and basic terms</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Payroll concept and basic terms is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

9. Explain Payroll heads, attendance and vouchers. **[3 marks]**

<p>Official scope. The syllabus specifies Payroll heads, attendance and vouchers. The corresponding study scope is: Create attendance, pay heads and payroll vouchers.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Payroll heads, attendance and vouchers</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Payroll heads, attendance and vouchers is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

10. Explain Payroll statement and statutory reports. **[3 marks]**

<p>Official scope. The syllabus specifies Payroll statement and statutory reports. The corresponding study scope is: Prepare payroll statement and payroll statutory reports.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Payroll statement and statutory reports</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term

and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th> <td>Explain the sequence, governing idea, calculation method, or document workflow.</td> </tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th> <td>Payroll statement and statutory reports is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr> </tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

module-4 — TDS, stock and pricing

11. Explain Tax deducted at source concept. **[3 marks]**

<p>Official scope. The syllabus specifies Tax deducted at source concept. The corresponding study scope is: Explain TDS, terms and feature settings. </p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Tax deducted at source concept</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr> </thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr> <th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Tax deducted at source concept is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody> </table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

12. Explain Expense ledgers and TDS vouchers. **[3 marks]**

<p>Official scope. The syllabus specifies Expense ledgers and TDS vouchers. The corresponding study scope is: Create expense ledgers and voucher entries for TDS.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Expense ledgers and TDS vouchers</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Expense ledgers and TDS vouchers is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

13. Explain TDS problems. **[3 marks]**

<p>Official scope. The syllabus specifies TDS problems. The corresponding study scope is: Solve problems of TDS, calculations, ledgers, vouchers and procedures.</p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for TDS problems</caption><thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr><th>Meaning</th><td>Define the official term and distinguish it from closely related terms.</td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th><td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>TDS

problems is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work.</p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

14. Explain Stock valuation in Tally. **[3 marks]**

<p>Official scope. The syllabus specifies Stock valuation in Tally. The corresponding study scope is: Explain stock features and valuation in Tally. </p> <p>How to study the topic. Begin with the exact definition or purpose, then identify the important elements, working sequence, variables or controls, and the performance or safety condition that must be checked. For a process, write input → transformation → output → verification. For a design or management method, write objective → assumptions → method → result → limitation.</p> <div class="table-wrap"><table><caption>Study frame for Stock valuation in Tally</caption> <thead><tr><th>Aspect</th><th>Expected learning</th></tr></thead><tbody><tr> <th>Meaning</th><td>Define the official term and distinguish it from closely related terms. </td></tr><tr><th>Principle or procedure</th><td>Explain the sequence, governing idea, calculation method, or document workflow.</td></tr><tr><th>Engineering check</th> <td>State the parameter, accuracy, speed, cost, reliability, safety, or compliance condition to verify.</td></tr><tr><th>Application</th><td>Stock valuation in Tally is applied in computerized financial accounting practice, documentation, troubleshooting, design review, or examination analysis.</td></tr></tbody></table></div> <p>Technical treatment. Use the official scope as a checklist. Relate each item to the neighbouring topics in the module, and distinguish normal operation from a fault, limitation, or incorrect assumption. In an examination answer, use the exact technical vocabulary, a labelled diagram or table where useful, and state units or assumptions for numerical work. </p>

Exam focus: State the definition or purpose, explain the working or sequence, and add one application or caution.

Practice Model Question Paper

Practice Model Paper — Not an Official Examination Paper

This paper is generated from the supplied module coverage for revision and does not claim to reproduce the official examination pattern.

1. **1.** Define or explain *Bank reconciliation statement and Tally audit features* with one relevant application. (5 marks)
2. **2.** Define or explain *Preparation of bank reconciliation statement* with one relevant application. (5 marks)
3. **3.** Define or explain *Duties and taxes* with one relevant application. (5 marks)
4. **4.** Define or explain *Goods and Service Tax concept* with one relevant application. (5 marks)
5. **5.** Define or explain *Payroll concept and basic terms* with one relevant application. (5 marks)
6. **6.** Define or explain *Payroll heads, attendance and vouchers* with one relevant application. (5 marks)
7. **7.** Define or explain *Tax deducted at source concept* with one relevant application. (5 marks)
8. **8.** Define or explain *Expense ledgers and TDS vouchers* with one relevant application. (5 marks)

> **Writing advice:** Use headings, standard terminology, and labelled diagrams or procedures where relevant.

Quick Revision

Module-wise key points

- **Bank reconciliation and company data management:** A reconciliation is complete only when the difference is explained and the final balance is documented.
- **Duties, taxes and GST:** Tax calculations must distinguish the tax type, taxable value, rate, ledger and reporting period.
- **Payroll processing:** A payroll audit trail should connect attendance, pay head, voucher, statement and statutory report.
- **TDS, stock and pricing:** Verify tax deduction, ledger posting, voucher evidence and stock valuation method before final reporting.

Exam checklist

- Write the official terminology before adding explanation.
- Use a labelled diagram or step sequence when it improves the answer.
- Check conditions, boundaries, safety, hygiene, and documentation points.
- Separate official syllabus information from your own example.

Last-minute revision: Review the coverage table, formula bank, diagram library, and common-mistake notes inside every topic.
