

# Virtualization Technology and Cloud Computing

Complete student lesson for course code **5133A**.

Revision 2026    Semester 5    Program Elective    4 modules

## Course snapshot

**Scheme:** 4 (L:4 T:0 P:0)

**Credits:** 4

**Contact:** 60 periods per semester

**Module hours listed:** 58

## Official Source Declaration

This lesson uses the supplied official syllabus PDF as the authoritative source for course information, revision, modules, topics, objectives, Course Outcomes, assessment information, official activities, practical requirements, and references.

**Source handling:** Official wording and numerical values are retained wherever supplied. Educational explanations, Malayalam support, examples, diagrams, and revision questions are added as study support and are not presented as additional official requirements.

**Transparency note:** Official assessment information is reproduced below from the supplied syllabus. Any limitation in the supplied PDF is not silently corrected.

## How to Study This Lesson

### Recommended sequence

1. Begin with the official source declaration and course dashboard.
2. Study each module in the official order and keep the coverage table as a checklist.
3. Open every topic, understand the example or procedure, and write your own short answer.
4. Use the revision section, glossary, questions, and practice paper after completing the modules.

**Study principle:** Keep English technical terminology, symbols, units, and official assessment wording unchanged in examination answers. Use the Malayalam support blocks only as a bridge to understanding.

**Handbook method:** Do not treat a topic as completed after reading its heading. For every topic card, complete the learning objectives, follow the conceptual framework, write the worked answer method, and answer the self-check questions. This creates a study record that is useful for class learning and examination preparation.

### Module-hour and outcome mapping

| No. | Module | Official hours | Relevant CO / level |
|-----|--------|----------------|---------------------|
|-----|--------|----------------|---------------------|

| No. | Module                                                               | Official hours | Relevant CO / level |
|-----|----------------------------------------------------------------------|----------------|---------------------|
| 1   | Virtualization and Hypervisors                                       | 15             | CO1                 |
| 2   | Virtual Machines and Network, Desktop and Application Virtualization | 14             | CO2                 |
| 3   | Cloud Computing and Architecture                                     | 15             | CO3                 |
| 4   | Cloud Models and Cloud Datacentres                                   | 14             | CO4                 |

### Prerequisites

- Basics of Computer Networks — course name shown as Computer Communication and Networks, semester 4.

### How to study this lesson

1. Read the module introduction and learning goals.
2. Open every topic and reproduce its example, sequence, or procedure.
3. Use Malayalam support as a bridge; retain English technical terms for examinations.
4. Attempt the module questions without looking at the answers.

## Objectives, Course Outcomes and CO-PO Information

### Official course objectives

1. Provide an exposure to the basics of Virtualization Technology and Cloud Computing.
2. Provide knowledge to apply Web Development, Network & System Administration skills in Cloud Computing Platforms.

### Course Outcomes

1. CO1: Illustrate the basic concepts of Virtualization and Hypervisors — 15 hours — Understanding.

2. CO2: Summarize Virtual Machines and Network, Desktop and Application Virtualization — 14 hours — Understanding.
3. CO3: Explain Cloud Computing and its Architecture — 15 hours — Understanding.
4. CO4: Summarize Models of Cloud Computing and Cloud Datacentres — 14 hours — Understanding.

#### CO-PO mapping as supplied

CO1: PO1 = 2 (Moderately mapped).

CO2: PO1 = 2 (Moderately mapped).

CO3: PO1 = 2 (Moderately mapped).

CO4: PO1 = 2 (Moderately mapped).

Legend: 3-Strongly mapped, 2-Moderately mapped, 1-Weakly mapped.

## Complete Syllabus Coverage

### Official syllabus point-by-point coverage

This audit layer maps every official source block to the corresponding lesson module. The source transcript is retained verbatim as extracted from the supplied syllabus; the study guidance below is educational support and is not presented as additional official syllabus content. No official point is intentionally omitted.

#### Source-to-lesson coverage map

| Module   | Lesson topic cards | Source basis            | Official point units |
|----------|--------------------|-------------------------|----------------------|
| Module 1 | 6                  | Official Contents block | 5                    |
| Module 2 | 10                 | Official Contents block | 8                    |
| Module 3 | 6                  | Official Contents block | 7                    |
| Module 4 | 7                  | Official Contents block | 5                    |

Use this checklist to confirm that every official module topic is represented in the lesson.

#### Complete official topic coverage checklist

| Module | Topic code | Topic | Hours |
|--------|------------|-------|-------|
|--------|------------|-------|-------|

| Module   | Topic code | Topic                                                                      | Hours |
|----------|------------|----------------------------------------------------------------------------|-------|
| module-1 | M1.01      | Virtualization and its importance                                          | 3     |
| module-1 | M1.02      | Virtualization and Cloud Computing                                         | 2     |
| module-1 | M1.03      | Virtualization software operation and types of virtualization              | 2     |
| module-1 | M1.04      | Hypervisors and types                                                      | 3     |
| module-1 | M1.05      | Role of a hypervisor                                                       | 2     |
| module-1 | M1.06      | Comparison of hypervisors                                                  | 3     |
| module-2 | M2.01      | Virtual machines                                                           | 2     |
| module-2 | M2.02      | Examining CPUs, memory, network and storage in a VM                        | 1     |
| module-2 | M2.03      | VM clones, templates and snapshots                                         | 1     |
| module-2 | M2.04      | Open Virtualization Format                                                 | 1     |
| module-2 | M2.05      | Benefits and components of network virtualization                          | 1     |
| module-2 | M2.06      | Virtual switch, VLAN and VM migration services                             | 2     |
| module-2 | M2.07      | Advantages and limitations of desktop virtualization                       | 2     |
| module-2 | M2.08      | Techniques used for desktop virtualization: RDS and VDI                    | 1     |
| module-2 | M2.09      | Components for desktop virtualization                                      | 1     |
| module-2 | M2.10      | Advantages, limitations and tools of application virtualization            | 2     |
| module-3 | M3.01      | Needs, history, benefits and limitations of cloud computing                | 3     |
| module-3 | M3.02      | Cloud infrastructure and vendors                                           | 2     |
| module-3 | M3.03      | Cloud data-centre requirements                                             | 2     |
| module-3 | M3.04      | Architectural, technological and operational influences on cloud computing | 3     |
| module-3 | M3.05      | Cloud architecture based on different criteria                             | 3     |
| module-3 | M3.06      | Characteristics of cloud computing                                         | 2     |
| module-4 | M4.01      | Cloud service models                                                       | 2     |
| module-4 | M4.02      | Cloud deployment models                                                    | 2     |
| module-4 | M4.03      | Cloud storage                                                              | 2     |
| module-4 | M4.04      | Cloud data-centre core elements                                            | 2     |
| module-4 | M4.05      | Storage network technologies                                               | 2     |

| Module   | Topic code | Topic                                                        | Hours |
|----------|------------|--------------------------------------------------------------|-------|
| module-4 | M4.06      | Cloud backup, disaster recovery and replication technologies | 2     |
| module-4 | M4.07      | Computing on demand                                          | 2     |

## Learning Roadmap

**1. Virtualization and Hypervisors**  
CO1 · 15 hours

**2. Virtual Machines and Network, Desktop and Application Virtualization**  
CO2 · 14 hours

**3. Cloud Computing and Architecture**  
CO3 · 15 hours

**4. Cloud Models and Cloud Datacentres**  
CO4 · 14 hours

The roadmap follows the order of the supplied syllabus.

### OFFICIAL MODULE 1

## Virtualization and Hypervisors

Virtualization abstracts computing resources so that multiple isolated or purpose-specific environments can share physical infrastructure. Hypervisors provide the control layer between hardware and virtual machines.

**Hours: 15**

**CO1 · Bloom level: Understanding**

**Handbook study routine:** Complete Module 1 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

### Official source coverage for Module 1

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:

Understanding Virtualization – Describing Virtualization – Importance of Virtualization

– Virtualization and Cloud Computing – Virtualization Software Operation – Types of Virtualization

Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors

–

Role of a Hypervisor – Comparison of Hypervisors

## Point-by-point study guide

## – Official syllabus point 1: Understanding Virtualization - Describing Virtualization - Importance of Virtualization

### Exact source point

**Syllabus text:** Understanding Virtualization - Describing Virtualization - Importance of Virtualization

### How to understand and study it

This point is an official syllabus requirement: “Understanding Virtualization - Describing Virtualization - Importance of Virtualization”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Understanding Virtualization - Describing Virtualization - Importance of Virtualization ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Understanding Virtualization – Describing Virtualization – Importance of Virtualization is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Understanding Virtualization – Describing Virtualization – Importance of Virtualization using the official terminology retained above.
- Organise the important elements of Understanding Virtualization – Describing Virtualization – Importance of Virtualization into a logical sequence, classification, structure, or calculation.
- Connect Understanding Virtualization – Describing Virtualization – Importance of Virtualization with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on Understanding Virtualization – Describing Virtualization – Importance of Virtualization with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Understanding Virtualization – Describing Virtualization – Importance of Virtualization. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Understanding Virtualization – Describing Virtualization – Importance of Virtualization is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Understanding Virtualization – Describing Virtualization – Importance of Virtualization, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Understanding Virtualization – Describing Virtualization – Importance of Virtualization, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Understanding Virtualization – Describing Virtualization – Importance of Virtualization?
- How would you distinguish Understanding Virtualization – Describing Virtualization – Importance of Virtualization from a closely related idea?
- Where would an engineer or technician encounter Understanding Virtualization – Describing Virtualization – Importance of Virtualization, and what must be checked before using it?
- What common mistake would make an answer or operation involving Understanding Virtualization – Describing Virtualization – Importance of Virtualization incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Understanding Virtualization – Describing

## – Official syllabus point 2: – Virtualization and Cloud Computing – Virtualization Software Operation – Types of

### Exact source point

**Syllabus text:** – Virtualization and Cloud Computing – Virtualization Software Operation – Types of

### How to understand and study it

This point is an official syllabus requirement: “– Virtualization and Cloud Computing – Virtualization Software Operation – Types of”. Study the sequence from input or initial condition to operation and final output. Note the role of each named stage and the cause-and-effect relationship. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Write the operating sequence in numbered steps, including the input, intermediate action, and output.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Virtualization, Cloud Computing – Virtualization Software Operation – Types of ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

– Virtualization and Cloud Computing – Virtualization Software Operation – Types of should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

## Learning objectives

- Define and scope – Virtualization and Cloud Computing – Virtualization Software Operation – Types of using the official terminology retained above.
- Organise the important elements of – Virtualization and Cloud Computing – Virtualization Software Operation – Types of into a logical sequence, classification, structure, or calculation.
- Connect – Virtualization and Cloud Computing – Virtualization Software Operation – Types of with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on – Virtualization and Cloud Computing – Virtualization Software Operation – Types of with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading – Virtualization and Cloud Computing – Virtualization Software Operation – Types of. It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

## Engineering application lens

For engineering practice, – Virtualization and Cloud Computing – Virtualization Software Operation – Types of matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

## Worked answer method

**Given:** the input conditions, required output, and any stated constraints.

**Required:** the logic sequence, program structure, truth table, or operating result.

**Method:** break the problem into named states or steps; evaluate them in order; test at least one alternate condition.

**Answer:** show the final sequence and state the expected output for each important condition.

### Exam answer blueprint

For a short-answer question on – Virtualization and Cloud Computing – Virtualization Software Operation – Types of, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is – Virtualization and Cloud Computing – Virtualization Software Operation – Types of, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining – Virtualization and Cloud Computing – Virtualization Software Operation – Types of?
- How would you distinguish – Virtualization and Cloud Computing – Virtualization Software Operation – Types of from a closely related idea?
- Where would an engineer or technician encounter – Virtualization and Cloud Computing – Virtualization Software Operation – Types of, and what must be checked before using it?
- What common mistake would make an answer or operation involving – Virtualization and Cloud Computing – Virtualization Software Operation – Types of incorrect?

### Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

**Malayalam support:** - Virtualization and Cloud Computing - Virtualization

## – Official syllabus point 3: Virtualization

### Exact source point

**Syllabus text:** Virtualization

### How to understand and study it

This point is an official syllabus requirement: “Virtualization”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Virtualization ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Virtualization is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Virtualization using the official terminology retained above.
- Organise the important elements of Virtualization into a logical sequence, classification, structure, or calculation.
- Connect Virtualization with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on Virtualization with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Virtualization. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Virtualization is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Virtualization, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Virtualization, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Virtualization?
- How would you distinguish Virtualization from a closely related idea?
- Where would an engineer or technician encounter Virtualization, and what must be checked before using it?
- What common mistake would make an answer or operation involving Virtualization incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

## – Official syllabus point 4: Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors –

### Exact source point

**Syllabus text:** Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors –

### How to understand and study it

This point is an official syllabus requirement: “Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors –”. Prepare a classification table. For every named type, learn its defining feature, distinguishing point, and one appropriate engineering context. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Prepare a table with type, defining feature, advantage or limitation, and application.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Understanding Hypervisors – Describing Hypervisor – Type 1, Type 2 Hypervisors – ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors – is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors – using the official terminology retained above.
- Organise the important elements of Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors – into a logical sequence, classification, structure, or calculation.
- Connect Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors – with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors – with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors –. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors – is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors –, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors –, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors –?
- How would you distinguish Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors – from a closely related idea?
- Where would an engineer or technician encounter Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors –, and what must be checked before using it?
- What common mistake would make an answer or operation involving Understanding Hypervisors – Describing Hypervisor – Type 1 and Type 2 Hypervisors – incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Understanding Hypervisors - Describing Hypervisor - Type 1 and Type 2 Hypervisors - താഴെ topic നൽകുന്നതിനുള്ള ഉത്തരം exact technical term നൽകുന്നതിനുള്ള. ഉത്തരം definition നൽകുന്നതിനുള്ള principle, named parts/steps, application, limitation നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. English terminology, symbols, units, diagram labels നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. Exam answer നൽകുന്നതിനുള്ള concept-നൽകുന്നതിനുള്ള ഉത്തരം-നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള.

## – Official syllabus point 5: Role of a Hypervisor – Comparison of Hypervisors

### Exact source point

**Syllabus text:** Role of a Hypervisor – Comparison of Hypervisors

### How to understand and study it

This point is an official syllabus requirement: “Role of a Hypervisor – Comparison of Hypervisors”. Prepare a comparison using the same criteria for every item: principle, performance, cost or complexity, limitation, and application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Role of a Hypervisor – Comparison of Hypervisors ് technical terms English-് ്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Role of a Hypervisor – Comparison of Hypervisors is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Role of a Hypervisor – Comparison of Hypervisors using the official terminology retained above.
- Organise the important elements of Role of a Hypervisor – Comparison of Hypervisors into a logical sequence, classification, structure, or calculation.
- Connect Role of a Hypervisor – Comparison of Hypervisors with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on Role of a Hypervisor – Comparison of Hypervisors with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Role of a Hypervisor – Comparison of Hypervisors. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Role of a Hypervisor – Comparison of Hypervisors is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Role of a Hypervisor – Comparison of Hypervisors, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Role of a Hypervisor – Comparison of Hypervisors, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Role of a Hypervisor – Comparison of Hypervisors?
- How would you distinguish Role of a Hypervisor – Comparison of Hypervisors from a closely related idea?
- Where would an engineer or technician encounter Role of a Hypervisor – Comparison of Hypervisors, and what must be checked before using it?
- What common mistake would make an answer or operation involving Role of a Hypervisor – Comparison of Hypervisors incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

### Malayalam support: Role of a Hypervisor – Comparison of Hypervisors

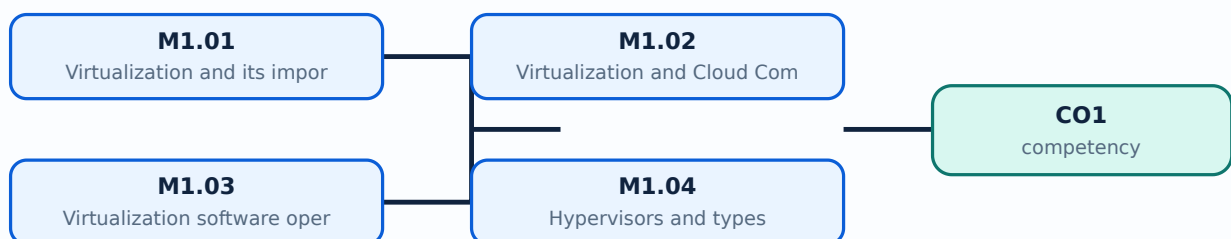

topic ഉള്ളത് exact technical term ഉപയോഗിക്കുക. definition principle, named parts/steps, application, limitation ഉപയോഗിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിക്കുക. Exam answer concept-ഉള്ളത് ഉപയോഗിക്കുക.

## Learning goals

- Define virtualization and explain its importance.
- Describe software operation and major types of virtualization.
- Differentiate Type 1 and Type 2 hypervisors and compare their roles.

## Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.

Learning map for Module module-1: the listed topics build the module competency.

## – M1.01 — Virtualization and its importance (3 hours)

### Concept and explanation

Virtualization presents a logical computing resource independently of its physical implementation. A virtual machine can receive virtual CPU, memory, storage, and network interfaces while the physical host allocates real resources. It improves server utilisation, isolation, testing, portability, provisioning speed, and disaster recovery, but introduces overhead, management complexity, and dependence on the host platform.

**Malayalam support:** Virtualization physical hardware-ൽ logical resources ലെക്ക് abstract ചെയ്യുന്നു. host-ൽ VM-ൽ resource share ചെയ്യുന്നു isolation ഉറപ്പുവരുത്തുന്നു.

### Study points

- Define abstraction, isolation, consolidation, and resource allocation.

**Engineering / workplace application:** Server consolidation, development laboratories, testing, and private cloud infrastructure use virtualization.

**Illustrative example:** A physical server can host separate web, database, and test VMs instead of dedicating one complete server to each small workload.

**Common mistake:** Virtualization does not create unlimited resources; overcommitment can reduce performance.

# Handbook treatment

M1.01 — Virtualization and its importance (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M1.01 — Virtualization and its importance (3 hours) using the official terminology retained above.
- Organise the important elements of M1.01 — Virtualization and its importance (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.01 — Virtualization and its importance (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on M1.01 — Virtualization and its importance (3 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

നൽകിയിരിക്കുന്നവയിൽ principle, named parts/steps, application, limitation നൽകിയിരിക്കുന്നവയിൽ  
നൽകിയിരിക്കുന്നു. English terminology, symbols, units, diagram labels നൽകിയിരിക്കുന്നു  
നൽകിയിരിക്കുന്നു. Exam answer നൽകിയിരിക്കുന്നവയിൽ concept-നൽകിയിരിക്കുന്നവയിൽ-നൽകിയിരിക്കുന്നവയിൽ  
നൽകിയിരിക്കുന്നു.

### Concept and explanation

Virtualization is an enabling technology for cloud computing, but the concepts are not identical. Cloud computing adds on-demand self-service, resource pooling, measured service, elasticity, and network access. A cloud platform can use virtual machines, containers, physical servers, or combinations; virtualization provides an efficient way to allocate and isolate many of those resources.

**Malayalam support:** Virtualization cloud-എന്നെങ്കിലും enabling technology; cloud computing സമാഹരിക്കുന്നതും service model. On-demand, elasticity, resource pooling എന്നിവ cloud characteristics.

### Study points

- Distinguish technology from service model.

**Engineering / workplace application:** Cloud providers use virtualized compute pools to create and remove instances on demand.

**Illustrative example:** A VM on a personal laptop is virtualization; a provider offering elastic VM instances with metering and remote access is a cloud service.

**Common mistake:** Saying cloud computing means only running a VM ignores service, management, billing, and network characteristics.

# Handbook treatment

M1.02 — Virtualization and Cloud Computing (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M1.02 — Virtualization and Cloud Computing (2 hours) using the official terminology retained above.
- Organise the important elements of M1.02 — Virtualization and Cloud Computing (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.02 — Virtualization and Cloud Computing (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on M1.02 — Virtualization and Cloud Computing (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M1.02 — Virtualization and Cloud Computing (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M1.02 — Virtualization and Cloud Computing (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M1.02 — Virtualization and Cloud Computing (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M1.02 — Virtualization and Cloud Computing (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.02 — Virtualization and Cloud Computing (2 hours)?
- How would you distinguish M1.02 — Virtualization and Cloud Computing (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.02 — Virtualization and Cloud Computing (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.02 — Virtualization and Cloud Computing (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M1.02 — Virtualization and Cloud Computing (2 hours)

topic exact technical term definition principle, named parts/steps, application, limitation English terminology, symbols, units, diagram labels Exam answer concept- -

### Concept and explanation

Virtualization software intercepts or manages privileged operations, maps guest resources to host resources, schedules virtual CPUs, translates memory addresses, and connects virtual devices to storage and networks. Types include server or hardware virtualization, storage virtualization, network virtualization, desktop virtualization, application virtualization, and operating-system-level approaches. The implementation may use full virtualization, para-virtualization, or hardware assistance.

**Malayalam support:** Virtualization software guest resource requests host resource-  
മാലയാളം map ഹോസ്റ്റ് റിസോഴ്സ്. Server, storage, network, desktop, application  
virtualization തരങ്ങൾ ഹോസ്റ്റ് റിസോഴ്സ് abstraction ഉപയോഗിക്കുന്നു.

### Study points

- Trace CPU, memory, storage, and network mapping from guest to host.

**Engineering / workplace application:** Data centres combine compute, storage, and network virtualization for flexible provisioning.

**Illustrative example:** A virtual disk file is mapped to physical storage while a virtual switch maps VM network interfaces to a host network path.

**Common mistake:** Treating all virtualization types as the same hides different management and performance issues.

# Handbook treatment

M1.03 — Virtualization software operation and types of virtualization (2 hours) should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

## Learning objectives

- Define and scope M1.03 — Virtualization software operation and types of virtualization (2 hours) using the official terminology retained above.
- Organise the important elements of M1.03 — Virtualization software operation and types of virtualization (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.03 — Virtualization software operation and types of virtualization (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on M1.03 — Virtualization software operation and types of virtualization (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M1.03 — Virtualization software operation and types of virtualization (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

## Engineering application lens

For engineering practice, M1.03 — Virtualization software operation and types of virtualization (2 hours) matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

## Worked answer method

**Given:** the input conditions, required output, and any stated constraints.

**Required:** the logic sequence, program structure, truth table, or operating result.

**Method:** break the problem into named states or steps; evaluate them in order; test at least one alternate condition.

**Answer:** show the final sequence and state the expected output for each important condition.

### Exam answer blueprint

For a short-answer question on M1.03 — Virtualization software operation and types of virtualization (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M1.03 — Virtualization software operation and types of virtualization (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.03 — Virtualization software operation and types of virtualization (2 hours)?
- How would you distinguish M1.03 — Virtualization software operation and types of virtualization (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.03 — Virtualization software operation and types of virtualization (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.03 — Virtualization software operation and types of virtualization (2 hours) incorrect?

### Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

**Malayalam support:** M1.03 — Virtualization software operation and types of virtualization (2 hours) താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ച് കൃത്യമായ technical term ഉപയോഗിച്ച് വിശദീകരിക്കുക. definition, principle, named parts/steps, application, limitation എന്നിവ ഉൾപ്പെടെ വിശദീകരിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിച്ച് വിശദീകരിക്കുക. Exam answer രീതിയിൽ concept-എന്നും application-എന്നും വിഭാഗത്തിൽ വിഭജിച്ച് വിശദീകരിക്കുക.

## – M1.04 — Hypervisors and types (3 hours)

### Concept and explanation

A hypervisor, or virtual-machine monitor, creates and manages virtual machines. Type 1 hypervisors run directly on hardware and are common in data-centre servers. Type 2 hypervisors run above a host operating system and are convenient for desktop development or laboratory use. Both must schedule CPU time, protect memory, provide virtual devices, and manage VM lifecycle. Hardware-assisted virtualization can reduce the cost of privileged instruction handling.

**Malayalam support:** Hypervisor VM-കൾ create, run, isolate, pause, clone, migrate, and stop ചെയ്യാൻ സാധിക്കും. Type 1 ഹാർഡ്‌വെയർ-ൽ; Type 2 host operating system-ൽ പ്രവർത്തിക്കും.

### Study points

- Compare placement, isolation, performance, and typical use of Type 1 and Type 2.

**Engineering / workplace application:** Enterprise server clusters generally prefer Type 1; a student may use Type 2 on a workstation for practice.

**Illustrative example:** A Type 2 hypervisor can run a Linux VM on a desktop OS, while a Type 1 hypervisor can manage many server VMs directly on a host machine.

**Common mistake:** The terms Type 1 and Type 2 describe hypervisor placement, not a simple ranking of good and bad.

# Handbook treatment

M1.04 — Hypervisors and types (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M1.04 — Hypervisors and types (3 hours) using the official terminology retained above.
- Organise the important elements of M1.04 — Hypervisors and types (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.04 — Hypervisors and types (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on M1.04 — Hypervisors and types (3 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M1.04 — Hypervisors and types (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M1.04 — Hypervisors and types (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M1.04 — Hypervisors and types (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M1.04 — Hypervisors and types (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.04 — Hypervisors and types (3 hours)?

## – M1.05 — Role of a hypervisor (2 hours)

### Concept and explanation

The hypervisor allocates virtual CPU time, maps guest memory, presents virtual storage and network devices, enforces isolation, monitors health, and supports lifecycle actions such as start, stop, snapshot, clone, and migration. It also exposes policies for resource limits, reservations, priorities, and high availability. A failure or misconfiguration in this control layer can affect many guests, so management and access control are important.

**Malayalam support:** Hypervisor resource allocation, isolation, virtual devices, lifecycle management, health monitoring ഏകദേശം നിർവ്വഹിക്കുന്നു. Hypervisor failure ൽ guest-കൾക്ക് പ്രശ്നം ഉണ്ടാകുന്നു; ഏകദേശം management security ഉറപ്പുവരുത്തുന്നു.

### Study points

- List at least four hypervisor functions.

**Engineering / workplace application:** A hypervisor is central to resource scheduling and availability in a virtualised data centre.

**Illustrative example:** If one VM receives a CPU reservation, the hypervisor scheduler honours that policy while sharing remaining CPU time among other VMs.

**Common mistake:** Ignoring hypervisor management security creates a single high-impact control-plane weakness.

# Handbook treatment

M1.05 — Role of a hypervisor (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M1.05 — Role of a hypervisor (2 hours) using the official terminology retained above.
- Organise the important elements of M1.05 — Role of a hypervisor (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.05 — Role of a hypervisor (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.

- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M1.05 — Role of a hypervisor (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M1.05 — Role of a hypervisor (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M1.05 — Role of a hypervisor (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.05 — Role of a hypervisor (2 hours)?
- How would you distinguish M1.05 — Role of a hypervisor (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.05 — Role of a hypervisor (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.05 — Role of a hypervisor (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M1.05 — Role of a hypervisor (2 hours) താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ച് കൃത്യമായ technical term ഉപയോഗിച്ച് definition നൽകുക. principle, named parts/steps, application, limitation എന്നിവയെക്കുറിച്ചും ഉൾപ്പെടെ. English terminology, symbols, units, diagram labels ഉപയോഗിച്ച് ഉത്തരം നൽകുക. Exam answer concept-യെക്കുറിച്ച് ഉപയോഗിച്ച് ഉത്തരം നൽകുക.

## – M1.06 — Comparison of hypervisors (3 hours)

### Concept and explanation

Hypervisors can be compared by hardware placement, performance overhead, hardware support, isolation, management tools, live-migration features, storage and network integration, scalability, cost, and ecosystem. A fair comparison must use the same workload, hardware, storage, network, and measurement method. Desktop convenience and enterprise availability are different evaluation criteria.

**Malayalam support:** Hypervisor compare ഹാർഡ്വെയർ placement, overhead, isolation, management, migration, scalability, cost, ecosystem സാമ്പത്തിക. Same workload and hardware ഹാർഡ്വെയർ fair comparison സാമ്പത്തിക.

### Study points

- Build a comparison table with Type 1/Type 2 placement, use case, management, and trade-offs.

**Engineering / workplace application:** Infrastructure teams select hypervisors based on service-level requirements and existing operations skills.

**Illustrative example:** A classroom may prioritise installation simplicity, whereas a production cluster prioritises high availability, migration, monitoring, and support.

**Common mistake:** A benchmark result from one workload cannot prove universal superiority.

# Handbook treatment

M1.06 — Comparison of hypervisors (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M1.06 — Comparison of hypervisors (3 hours) using the official terminology retained above.
- Organise the important elements of M1.06 — Comparison of hypervisors (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M1.06 — Comparison of hypervisors (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtualization and Hypervisors.
- Write an examination answer on M1.06 — Comparison of hypervisors (3 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M1.06 — Comparison of hypervisors (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M1.06 — Comparison of hypervisors (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M1.06 — Comparison of hypervisors (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M1.06 — Comparison of hypervisors (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M1.06 — Comparison of hypervisors (3 hours)?
- How would you distinguish M1.06 — Comparison of hypervisors (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M1.06 — Comparison of hypervisors (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M1.06 — Comparison of hypervisors (3 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M1.06 — Comparison of hypervisors (3 hours) താഴെ topic തിരഞ്ഞെടുക്കുക. തിരഞ്ഞെടുക്കുന്ന exact technical term തിരഞ്ഞെടുക്കുക. തിരഞ്ഞെടുക്കുന്ന definition തിരഞ്ഞെടുക്കുക. principle, named parts/steps, application, limitation തിരഞ്ഞെടുക്കുക. English terminology, symbols, units, diagram labels തിരഞ്ഞെടുക്കുക. Exam answer തിരഞ്ഞെടുക്കുക concept-തിരഞ്ഞെടുക്കുക തിരഞ്ഞെടുക്കുക തിരഞ്ഞെടുക്കുക.

**Module summary:** Virtualization abstracts resources; the hypervisor allocates and protects them so virtual machines can operate predictably.

## OFFICIAL MODULE 2

# Virtual Machines and Network, Desktop and Application Virtualization

This module moves from the hypervisor to practical VM resources and then to network, desktop, and application abstractions.

**Hours: 14**

**CO2 · Bloom level: Understanding**

**Handbook study routine:** Complete Module 2 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

## Official source coverage for Module 2

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

[View extracted official source transcript](#)

Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open Virtualization Format

Network Virtualization – Benefits – Components – Virtual Switch – Virtual LAN – VM Migration Services

Desktop and Application Virtualization – Advantages and Limitations of Desktop Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – Components for Desktop Virtualization – Advantages and Limitations of Application Virtualization – Tools used for Application Virtualization

## **Point-by-point study guide**

**– Official syllabus point 1: Understanding Virtual Machines (VM) - Describing VM - CPUs, Memory, Network and Storage in a VM - Working of VM - VM Clones, Templates, Snapshots - Open**

**Exact source point**

**Syllabus text:** Understanding Virtual Machines (VM) - Describing VM - CPUs, Memory, Network and Storage in a VM - Working of VM - VM Clones, Templates, Snapshots - Open

**How to understand and study it**

This point is an official syllabus requirement: “Understanding Virtual Machines (VM) - Describing VM - CPUs, Memory, Network and Storage in a VM - Working of VM - VM Clones, Templates, Snapshots - Open”. Study the sequence from input or initial condition to operation and final output. Note the role of each named stage and the cause-and-effect relationship. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

**Study sequence**

1. Write the exact technical term and a one-sentence definition in your own words.
2. Write the operating sequence in numbered steps, including the input, intermediate action, and output.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Understanding Virtual Machines (VM) - Describing VM - CPUs, Memory, Network, Storage in a VM - Working of VM - VM Clones ് technical terms English-് ്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

## Learning objectives

- Define and scope Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open using the official terminology retained above.
- Organise the important elements of Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open into a logical sequence, classification, structure, or calculation.
- Connect Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open. It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

## Engineering application lens

For engineering practice, Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to

trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

### Worked answer method

**Given:** the input conditions, required output, and any stated constraints.

**Required:** the logic sequence, program structure, truth table, or operating result.

**Method:** break the problem into named states or steps; evaluate them in order; test at least one alternate condition.

**Answer:** show the final sequence and state the expected output for each important condition.

### Exam answer blueprint

For a short-answer question on Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open?
- How would you distinguish Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open from a closely related idea?
- Where would an engineer or technician encounter Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open, and what must be checked before using it?
- What common mistake would make an answer or operation involving Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open incorrect?

## Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

**Malayalam support:** Understanding Virtual Machines (VM) – Describing VM – CPUs, Memory, Network and Storage in a VM – Working of VM – VM Clones, Templates, Snapshots – Open  $\square\square\square\square$  topic  $\square\square\square\square\square\square\square\square\square\square$   $\square\square\square\square$  exact technical term  $\square\square\square\square\square\square\square\square\square\square$ .  $\square\square\square\square$  definition  $\square\square\square\square\square\square\square\square$  principle, named parts/steps, application, limitation  $\square\square\square\square\square$   $\square\square\square\square\square\square\square$   $\square\square\square\square\square\square\square$ . English terminology, symbols, units, diagram labels  $\square\square\square\square\square$   $\square\square\square\square\square\square\square$ . Exam answer  $\square\square\square\square\square\square\square\square$  concept- $\square\square\square\square$   $\square\square\square\square$ - $\square\square\square$   $\square\square\square\square$   $\square\square\square\square\square\square\square\square\square\square$ .

## — Official syllabus point 2: Virtualization Format

### Exact source point

**Syllabus text:** Virtualization Format

### How to understand and study it

This point is an official syllabus requirement: “Virtualization Format”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Virtualization Format ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Virtualization Format is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Virtualization Format using the official terminology retained above.
- Organise the important elements of Virtualization Format into a logical sequence, classification, structure, or calculation.
- Connect Virtualization Format with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on Virtualization Format with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Virtualization Format. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Virtualization Format is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Virtualization Format, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Virtualization Format, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Virtualization Format?
- How would you distinguish Virtualization Format from a closely related idea?
- Where would an engineer or technician encounter Virtualization Format, and what must be checked before using it?
- What common mistake would make an answer or operation involving Virtualization Format incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Virtualization Format  $\square\square\square\square$  topic  $\square\square\square\square\square\square\square\square\square\square$   
 $\square\square\square\square$  exact technical term  $\square\square\square\square\square\square\square\square\square\square$ .  $\square\square\square\square$  definition  $\square\square\square\square\square\square\square\square$   
principle, named parts/steps, application, limitation  $\square\square\square\square$   $\square\square\square\square\square\square$   
 $\square\square\square\square\square\square$ . English terminology, symbols, units, diagram labels  $\square\square\square\square$   
 $\square\square\square\square\square\square$ . Exam answer  $\square\square\square\square\square\square\square\square$  concept- $\square\square\square$   $\square\square\square\square$ - $\square\square$   $\square\square\square\square$   
 $\square\square\square\square\square\square\square\square\square$ .

## Exact source point

**Syllabus text:** Network Virtualization – Benefits – Components – Virtual Switch – Virtual LAN – VM

## How to understand and study it

This point is an official syllabus requirement: “Network Virtualization - Benefits - Components - Virtual Switch - Virtual LAN - VM”. Study this as a structure: identify each named part, state its function, and explain how the parts are connected or arranged. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

## Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Draw a labelled arrangement or block diagram and write the function of every labelled part.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** syllabus point നെറ്റ്വർക്ക് വൈരുദ്ധ്യം Network Virtualization - Benefits - Components - Virtual Switch - Virtual LAN - VM ന്റെ technical terms English-നോട്ട് ചെയ്യുക. definition പ്രിൻസിപ്പിൾ പ്രയോഗം; term-ന്റെ function, difference, application ന്റെ. ## Official syllabus point 4: Migration Services

### Exact source point

**Syllabus text:** Migration Services

### How to understand and study it

This point is an official syllabus requirement: “Migration Services”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Migration Services ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Migration Services is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Migration Services using the official terminology retained above.
- Organise the important elements of Migration Services into a logical sequence, classification, structure, or calculation.
- Connect Migration Services with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on Migration Services with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Migration Services. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Migration Services is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Migration Services, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Migration Services, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Migration Services?
- How would you distinguish Migration Services from a closely related idea?
- Where would an engineer or technician encounter Migration Services, and what must be checked before using it?
- What common mistake would make an answer or operation involving Migration Services incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Migration Services താഴെ topic നൽകുന്നതിനുള്ള ഉത്തരം exact technical term നൽകുന്നതിനുള്ളതാണ്. താഴെ definition നൽകുന്നതിനുള്ള principle, named parts/steps, application, limitation നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ളതാണ്. ## – Official syllabus point 5: Desktop and Application Virtualization – Advantages and Limitations of Desktop

### Exact source point

**Syllabus text:** Desktop and Application Virtualization – Advantages and Limitations of Desktop

### How to understand and study it

This point is an official syllabus requirement: “Desktop and Application Virtualization – Advantages and Limitations of Desktop”. Prepare a comparison using the same criteria for every item: principle, performance, cost or complexity, limitation, and application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Desktop, Application Virtualization – Advantages, Limitations of Desktop ് technical terms English- ്. ് definition ് principle ്; ് term-ൿ function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Desktop and Application Virtualization – Advantages and Limitations of Desktop is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Desktop and Application Virtualization – Advantages and Limitations of Desktop using the official terminology retained above.
- Organise the important elements of Desktop and Application Virtualization – Advantages and Limitations of Desktop into a logical sequence, classification, structure, or calculation.
- Connect Desktop and Application Virtualization – Advantages and Limitations of Desktop with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on Desktop and Application Virtualization – Advantages and Limitations of Desktop with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Desktop and Application Virtualization – Advantages and Limitations of Desktop. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Desktop and Application Virtualization – Advantages and Limitations of Desktop is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Desktop and Application Virtualization – Advantages and Limitations of Desktop, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Desktop and Application Virtualization – Advantages and Limitations of Desktop, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Desktop and Application Virtualization – Advantages and Limitations of Desktop?
- How would you distinguish Desktop and Application Virtualization – Advantages and Limitations of Desktop from a closely related idea?
- Where would an engineer or technician encounter Desktop and Application Virtualization – Advantages and Limitations of Desktop, and what must be checked before using it?
- What common mistake would make an answer or operation involving Desktop and Application Virtualization – Advantages and Limitations of Desktop incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Desktop and Application Virtualization - Advantages and Limitations of Desktop  $\square\square\square\square$  topic  $\square\square\square\square\square\square\square\square\square\square$   $\square\square\square\square$  exact technical term  $\square\square\square\square\square\square\square\square\square\square$ .  $\square\square\square\square$  definition  $\square\square\square\square\square\square\square\square\square$  principle, named parts/steps, application, limitation  $\square\square\square\square\square\square$   $\square\square\square\square\square\square\square\square$   $\square\square\square\square\square\square\square$ . English terminology, symbols, units, diagram labels  $\square\square\square\square\square$   $\square\square\square\square\square\square\square\square$ . Exam answer  $\square\square\square\square\square\square\square\square$  concept- $\square\square\square\square$   $\square\square\square\square\square$ - $\square\square\square$   $\square\square\square\square$   $\square\square\square\square\square\square\square\square\square\square$ .

## – Official syllabus point 6: Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) –

### Exact source point

**Syllabus text:** Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) –

### How to understand and study it

This point is an official syllabus requirement: “Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) –”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Virtualization – Techniques used for Desktop Virtualization (RDS, VDI) – ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – using the official terminology retained above.
- Organise the important elements of Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – into a logical sequence, classification, structure, or calculation.
- Connect Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) –. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) –, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) –, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) –?
- How would you distinguish Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – from a closely related idea?
- Where would an engineer or technician encounter Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) –, and what must be checked before using it?
- What common mistake would make an answer or operation involving Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Virtualization – Techniques used for Desktop Virtualization (RDS and VDI) – താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ച് exact technical term ഉപയോഗിക്കുക. താഴെ പറയുന്ന definition ഉപയോഗിച്ച് principle, named parts/steps, application, limitation തുടങ്ങിയവ വിശദീകരിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിക്കുക. Exam answer രേഖപ്പെടുത്തുക concept-കൾ ഉപയോഗിച്ച് വിശദീകരിക്കുക.

## – Official syllabus point 7: Components for Desktop Virtualization - Advantages and Limitations of Application

### Exact source point

**Syllabus text:** Components for Desktop Virtualization – Advantages and Limitations of Application

### How to understand and study it

This point is an official syllabus requirement: “Components for Desktop Virtualization – Advantages and Limitations of Application”. Study this as a structure: identify each named part, state its function, and explain how the parts are connected or arranged. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Draw a labelled arrangement or block diagram and write the function of every labelled part.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Components for Desktop Virtualization – Advantages, Limitations of Application ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Components for Desktop Virtualization – Advantages and Limitations of Application is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Components for Desktop Virtualization – Advantages and Limitations of Application using the official terminology retained above.
- Organise the important elements of Components for Desktop Virtualization – Advantages and Limitations of Application into a logical sequence, classification, structure, or calculation.
- Connect Components for Desktop Virtualization – Advantages and Limitations of Application with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on Components for Desktop Virtualization – Advantages and Limitations of Application with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Components for Desktop Virtualization – Advantages and Limitations of Application. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Components for Desktop Virtualization – Advantages and Limitations of Application is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Components for Desktop Virtualization – Advantages and Limitations of Application, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. - Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Components for Desktop Virtualization – Advantages and Limitations of Application  $\square\square\square\square$  topic  $\square\square\square\square\square\square\square\square\square\square$   $\square\square\square\square$  exact technical term  $\square\square\square\square\square\square\square\square\square\square$ .  $\square\square\square\square$  definition  $\square\square\square\square\square\square\square\square$  principle, named parts/steps, application, limitation  $\square\square\square\square\square$   $\square\square\square\square\square\square\square$   $\square\square\square\square\square\square\square$ . English terminology, symbols, units, diagram labels  $\square\square\square\square\square$   $\square\square\square\square\square\square\square$ . Exam answer  $\square\square\square\square\square\square\square\square$  concept- $\square\square\square\square$   $\square\square\square\square$ - $\square\square\square$   $\square\square\square\square$   $\square\square\square\square\square\square\square\square\square\square$ .

## – Official syllabus point 8: Virtualization – Tools used for Application Virtualization

### Exact source point

**Syllabus text:** Virtualization – Tools used for Application Virtualization

### How to understand and study it

This point is an official syllabus requirement: “Virtualization – Tools used for Application Virtualization”. Connect each named application to the technical concept: identify the requirement, the component or method used, and the result obtained. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Virtualization – Tools used for Application Virtualization ് technical terms English-് ്. ് definition ് principle ്; ് ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Virtualization – Tools used for Application Virtualization is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Virtualization – Tools used for Application Virtualization using the official terminology retained above.
- Organise the important elements of Virtualization – Tools used for Application Virtualization into a logical sequence, classification, structure, or calculation.
- Connect Virtualization – Tools used for Application Virtualization with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on Virtualization – Tools used for Application Virtualization with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Virtualization – Tools used for Application Virtualization. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Virtualization – Tools used for Application Virtualization is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Virtualization – Tools used for Application Virtualization, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Virtualization – Tools used for Application Virtualization, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Virtualization – Tools used for Application Virtualization?
- How would you distinguish Virtualization – Tools used for Application Virtualization from a closely related idea?
- Where would an engineer or technician encounter Virtualization – Tools used for Application Virtualization, and what must be checked before using it?
- What common mistake would make an answer or operation involving Virtualization – Tools used for Application Virtualization incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

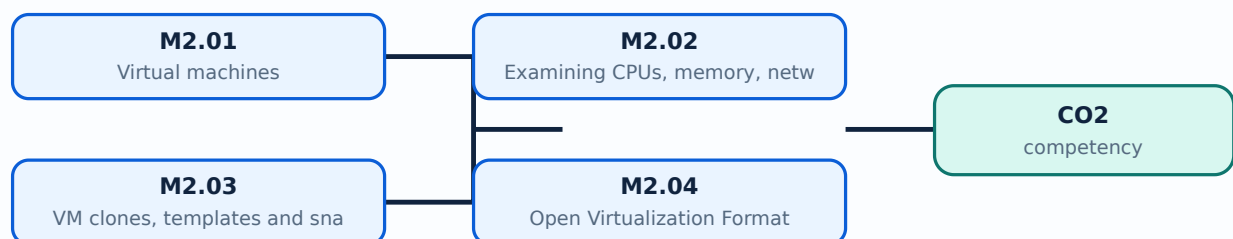

**Malayalam support:** Virtualization – Tools used for Application Virtualization. താഴെ പറയുന്ന വിഷയം പഠിക്കുന്നതിനായി ഉപയോഗിക്കേണ്ട exact technical term ഉപയോഗിക്കുക. വിഷയം definition, principle, named parts/steps, application, limitation എന്നിവ ഉപയോഗിച്ച് വിശദീകരിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിക്കുക. Exam answer രീതിയിൽ concept-യെക്കുറിച്ച് വിശദീകരിക്കുക.

## Learning goals

- Identify VM CPU, memory, network, and storage resources.
- Explain clones, templates, snapshots, Open Virtualization Format, and migration.
- Compare desktop and application virtualization, including RDS and VDI.

## Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.

Learning map for Module module-2: the listed topics build the module competency.

## – M2.01 — Virtual machines (2 hours)

### Concept and explanation

A virtual machine is an isolated software-defined computer with virtual hardware, a guest operating system, applications, virtual disks, and network interfaces. The VM configuration records assigned CPU, memory, storage, firmware, boot order, and device connections. A VM lifecycle includes creation, installation, start, suspend, snapshot, clone, migration, and retirement. Isolation is logical and must be supported by secure hypervisor configuration.

**Malayalam support:** VM എന്നു software-defined computer എന്നു വിവരിക്കുന്നു. Guest OS, virtual CPU, memory, disk, network interface എന്നിവ configuration-ൽ വിവരിക്കുന്നു.

### Study points

- Identify guest OS, virtual hardware, configuration, and lifecycle states.

**Engineering / workplace application:** VMs support reproducible laboratories and controlled server deployment.

**Illustrative example:** A student can create a VM template with a configured operating system and use it to provision multiple identical practice environments.

**Common mistake:** A VM snapshot is not a full substitute for an independent backup strategy.

# Handbook treatment

M2.01 — Virtual machines (2 hours) is best studied as an engineering system rather than as an isolated name. Relate the construction of each main part to its function, then follow the energy or material flow from input to output.

## Learning objectives

- Define and scope M2.01 — Virtual machines (2 hours) using the official terminology retained above.
- Organise the important elements of M2.01 — Virtual machines (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.01 — Virtual machines (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on M2.01 — Virtual machines (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M2.01 — Virtual machines (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Identify the purpose, input, output, and operating conditions.
- Draw or imagine the main construction and label the components that determine performance.
- Explain the operating sequence using cause-and-effect statements.
- Connect performance, losses, limitations, maintenance, and application to the operating principle.

## Engineering application lens

In practice, M2.01 — Virtual machines (2 hours) is selected by matching the required duty with capacity, efficiency, controllability, reliability, safety, maintenance needs, and environmental conditions. A good diploma-level answer explains not only how it works, but why that construction is suitable for the stated application.

## Worked answer method

**Given:** the equipment type, duty, operating condition, or fault described in the question.

**Required:** construction, working, selection, performance, or diagnosis as requested.

**Method:** begin with a labelled block or component list; explain the energy/material path; relate each observation to a likely cause or operating principle.

**Answer:** finish with the application, limitation, and one relevant safety or maintenance point.

### Exam answer blueprint

For a short-answer question on M2.01 — Virtual machines (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M2.01 — Virtual machines (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.01 — Virtual machines (2 hours)?
- How would you distinguish M2.01 — Virtual machines (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.01 — Virtual machines (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.01 — Virtual machines (2 hours) incorrect?

### Common mistakes and safety emphasis

- Listing parts without stating their functions.
- Describing operation without identifying the input and output.
- Mixing the construction of similar equipment types.
- Ignoring ratings, operating limits, guarding, lubrication, isolation, or maintenance conditions.

**Malayalam support:** M2.01 — Virtual machines (2 hours) താഴെ topic

തയ്യാറാക്കേണ്ടതാണ് താഴെ exact technical term തയ്യാറാക്കേണ്ടതാണ്. താഴെ definition

തയ്യാറാക്കേണ്ടതാണ് principle, named parts/steps, application, limitation തയ്യാറാക്കേണ്ടതാണ്

തയ്യാറാക്കേണ്ടതാണ്. English terminology, symbols, units, diagram labels തയ്യാറാക്കേണ്ടതാണ്

തയ്യാറാക്കേണ്ടതാണ്. Exam answer തയ്യാറാക്കേണ്ടതാണ് concept-തയ്യാറാക്കേണ്ടതാണ്-തയ്യാറാക്കേണ്ടതാണ്

തയ്യാറാക്കേണ്ടതാണ്.

### Concept and explanation

CPU allocation includes virtual processors, shares, limits, or reservations. Memory allocation must account for guest needs, hypervisor overhead, and possible overcommitment. A VM network interface connects to a virtual switch or virtual network, while virtual storage maps to a virtual disk backed by a datastore or file. Examination means checking configured and actual utilisation, not only the maximum assigned value.

**Malayalam support:** VM- assigned CPU/memory  $\frac{1}{2}$   $\frac{1}{4}$   $\frac{1}{8}$   $\frac{1}{16}$   $\frac{1}{32}$   $\frac{1}{64}$   $\frac{1}{128}$   $\frac{1}{256}$   $\frac{1}{512}$   $\frac{1}{1024}$   $\frac{1}{2048}$   $\frac{1}{4096}$   $\frac{1}{8192}$   $\frac{1}{16384}$   $\frac{1}{32768}$   $\frac{1}{65536}$   $\frac{1}{131072}$   $\frac{1}{262144}$   $\frac{1}{524288}$   $\frac{1}{1048576}$   $\frac{1}{2097152}$   $\frac{1}{4194304}$   $\frac{1}{8388608}$   $\frac{1}{16777216}$   $\frac{1}{33554432}$   $\frac{1}{67108864}$   $\frac{1}{134217728}$   $\frac{1}{268435456}$   $\frac{1}{536870912}$   $\frac{1}{1073741824}$   $\frac{1}{2147483648}$   $\frac{1}{4294967296}$   $\frac{1}{8589934592}$   $\frac{1}{17179869184}$   $\frac{1}{34359738368}$   $\frac{1}{68719476736}$   $\frac{1}{137438953472}$   $\frac{1}{274877906944}$   $\frac{1}{549755813888}$   $\frac{1}{1099511627776}$   $\frac{1}{2199023255552}$   $\frac{1}{4398046511104}$   $\frac{1}{8796093022208}$   $\frac{1}{17592186044416}$   $\frac{1}{35184372088832}$   $\frac{1}{70368744177664}$   $\frac{1}{140737488355328}$   $\frac{1}{281474976710656}$   $\frac{1}{562949953421312}$   $\frac{1}{1125899906842624}$   $\frac{1}{2251799813685248}$   $\frac{1}{4503599627370496}$   $\frac{1}{9007199254740992}$   $\frac{1}{18014398509481984}$   $\frac{1}{36028797018963968}$   $\frac{1}{72057594037927936}$   $\frac{1}{144115188075855872}$   $\frac{1}{288230376151711744}$   $\frac{1}{576460752303423488}$   $\frac{1}{1152921504606846976}$   $\frac{1}{2305843009213693952}$   $\frac{1}{4611686018427387904}$   $\frac{1}{9223372036854775808}$   $\frac{1}{18446744073709551616}$   $\frac{1}{36893488147419103232}$   $\frac{1}{73786976294838206464}$   $\frac{1}{147573952589676412928}$   $\frac{1}{295147905179352825856}$   $\frac{1}{590295810358705651712}$   $\frac{1}{1180591620717411303424}$   $\frac{1}{2361183241434822606848}$   $\frac{1}{4722366482869645213696}$   $\frac{1}{9444732965739290427392}$   $\frac{1}{18889465931478580854784}$   $\frac{1}{37778931862957161709568}$   $\frac{1}{75557863725914323419136}$   $\frac{1}{151115727451828646838272}$   $\frac{1}{302231454903657293676544}$   $\frac{1}{604462909807314587353088}$   $\frac{1}{1208925819614629174706176}$   $\frac{1}{2417851639229258349412352}$   $\frac{1}{4835703278458516698824704}$   $\frac{1}{9671406556917033397649408}$   $\frac{1}{19342813113834066795298816}$   $\frac{1}{38685626227668133590597632}$   $\frac{1}{77371252455336267181195264}$   $\frac{1}{154742504910672534362390528}$   $\frac{1}{309485009821345068724781056}$   $\frac{1}{618970019642690137449562112}$   $\frac{1}{1237940039285380274899124224}$   $\frac{1}{2475880078570760549798248448}$   $\frac{1}{4951760157141521099596496896}$   $\frac{1}{9903520314283042199192993792}$   $\frac{1}{19807040628566084398385987584}$   $\frac{1}{39614081257132168796771975168}$   $\frac{1}{79228162514264337593543950336}$   $\frac{1}{158456325028528675187087900672}$   $\frac{1}{316912650057057350374175801344}$   $\frac{1}{633825300114114700748351602688}$   $\frac{1}{1267650600228229401496703205376}$   $\frac{1}{2535301200456458802993406410752}$   $\frac{1}{5070602400912917605986812821504}$   $\frac{1}{10141204801825835211973625643008}$   $\frac{1}{20282409603651670423947251286016}$   $\frac{1}{40564819207303340847894502572032}$   $\frac{1}{81129638414606681695789005144064}$   $\frac{1}{162259276829213363391578010288128}$   $\frac{1}{324518553658426726783156020576256}$   $\frac{1}{649037107316853453566312041152512}$   $\frac{1}{1298074214633706907132624082305024}$   $\frac{1}{2596148429267413814265248164610048}$   $\frac{1}{5192296858534827628530496329220096}$   $\frac{1}{10384593717069655257060992658440192}$   $\frac{1}{20769187434139310514121985316880384}$   $\frac{1}{41538374868278621028243970633760768}$   $\frac{1}{83076749736557242056487941267521536}$   $\frac{1}{166153499473114484112975882535043072}$   $\frac{1}{332306998946228968225951765070086144}$   $\frac{1}{664613997892457936451903530140172288}$   $\frac{1}{1329227995784915872903807060280344576}$   $\frac{1}{2658455991569831745807614120560689152}$   $\frac{1}{5316911983139663491615228241121378304}$   $\frac{1}{10633823966279326983230456482242756608}$   $\frac{1}{21267647932558653966460912964485513216}$   $\frac{1}{42535295865117307932921825928971026432}$   $\frac{1}{85070591730234615865843651857942052864}$   $\frac{1}{170141183460469231731687303715884105728}$   $\frac{1}{340282366920938463463374607431768211456}$   $\frac{1}{680564733841876926926749214863536422912}$   $\frac{1}{1361129467683753853853498429727072845824}$   $\frac{1}{2722258935367507707706996859454145691648}$   $\frac{1}{5444517870735015415413993718908291383296}$   $\frac{1}{10889035741470030830827987437816582766592}$

## Study points

- Check configuration, utilisation, contention, storage latency, and network connectivity.

**Engineering / workplace application:** Resource examination helps diagnose slow VMs and prevents careless over-allocation.

**Illustrative example:** If a VM has four virtual CPUs but uses only one, reducing unnecessary allocation may improve host scheduling for the whole cluster.

**Common mistake:** Adding virtual CPUs can make a workload slower when scheduling contention increases.

# Handbook treatment

M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours) should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

## Learning objectives

- Define and scope M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours) using the official terminology retained above.
- Organise the important elements of M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

## Engineering application lens

For engineering practice, M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours) matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

## Worked answer method

**Given:** the input conditions, required output, and any stated constraints.

**Required:** the logic sequence, program structure, truth table, or operating result.

**Method:** break the problem into named states or steps; evaluate them in order; test at least one alternate condition.

**Answer:** show the final sequence and state the expected output for each important condition.

### Exam answer blueprint

For a short-answer question on M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours)?
- How would you distinguish M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours) incorrect?

### Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

**Malayalam support:** M2.02 — Examining CPUs, memory, network and storage in a VM (1 hours) താഴെ പറയുന്ന വിഷയം പരീക്ഷിക്കുക exact technical term ഉപയോഗിക്കുക. definition principle, named parts/steps, application, limitation ഉപയോഗിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിക്കുക. Exam answer concept-ഉപയോഗിക്കുക. ഉപയോഗിക്കുക.

## — M2.03 — VM clones, templates and snapshots (1 hours)

### Concept and explanation

A clone is a copy of a VM, a template is a prepared master image used for repeated deployment, and a snapshot records a point-in-time VM state or disk relationship for short-term rollback. Templates improve consistency; clones create independent environments; snapshots are useful before a controlled change but can grow and affect performance. Identity, network address, and licensing must be handled when copying a VM.

**Malayalam support:** Clone copy കോപ്പി; template repeated deployment-മാസ്റ്റർ ഇമേജ്; snapshot point-in-time rollback ക്യാഷ്ബാക്ക്. Snapshot ക്യാഷ്ബാക്ക് backup ബേക്കപ്പ്. ക്യാഷ്ബാക്ക് ക്യാഷ്ബാക്ക്.

### Study points

- Distinguish clone, template, and snapshot by purpose and lifecycle.

**Engineering / workplace application:** Templates support standard server builds and classroom labs.

**Illustrative example:** Take a snapshot before a software upgrade, verify the upgrade, and remove the snapshot after an independent backup and validation.

**Common mistake:** Keeping old snapshots indefinitely can consume storage and complicate recovery.

# Handbook treatment

M2.03 — VM clones, templates and snapshots (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M2.03 — VM clones, templates and snapshots (1 hours) using the official terminology retained above.
- Organise the important elements of M2.03 — VM clones, templates and snapshots (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.03 — VM clones, templates and snapshots (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on M2.03 — VM clones, templates and snapshots (1 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M2.03 — VM clones, templates and snapshots (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M2.03 — VM clones, templates and snapshots (1 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M2.03 — VM clones, templates and snapshots (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M2.03 — VM clones, templates and snapshots (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.03 — VM clones, templates and snapshots (1 hours)?

topic exact technical term definition principle, named parts/steps, application, limitation English terminology, symbols, units, diagram labels Exam answer concept- -

### Concept and explanation

Open Virtualization Format (OVF) packages describe virtual appliances using portable metadata and disk images. The package can record virtual hardware requirements, network mappings, and deployment information. Portability still depends on hypervisor compatibility, guest drivers, licensing, and supported virtual hardware. OVF or related appliance formats simplify distribution of prepared virtual machines.

**Malayalam support:** OVF virtual appliance-ഓപ്പൺ മെറ്റാഡാറ്റ, വെർച്വൽ ഹാർഡ്വെയർ റീക്വയർമെന്റുകൾ, ഡിസ്ക് ഇമേജുകൾ പാക്കേജ് ഓപ്പൺ ഫോർമാറ്റിൽ. പോർട്ടബിൾ ഓപ്പൺ ഹൈപ്പർവൈസർ കമ്പാറ്റിബിൾ ആയിട്ടുള്ള ഡ്രൈവറുകൾ ഉൾക്കൊള്ളുന്നു.

### Study points

- State the role of metadata and disk images in an appliance package.

**Engineering / workplace application:** Training vendors can distribute a ready-to-import lab appliance using an open format.

**Illustrative example:** An appliance package can specify that a guest requires two virtual CPUs, a virtual disk, and a network connected to a named virtual network.

**Common mistake:** Portable format does not guarantee that every feature works unchanged on every platform.

# Handbook treatment

M2.04 — Open Virtualization Format (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M2.04 — Open Virtualization Format (1 hours) using the official terminology retained above.
- Organise the important elements of M2.04 — Open Virtualization Format (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.04 — Open Virtualization Format (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on M2.04 — Open Virtualization Format (1 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

## — M2.05 — Benefits and components of network virtualization (1 hours)

### Concept and explanation

Network virtualization abstracts switches, routers, links, addresses, and security policies from physical cabling. Components may include virtual network interfaces, virtual switches, VLANs, overlay networks, virtual routers, firewalls, and controllers. Benefits include rapid provisioning, segmentation, workload mobility, automation, and efficient utilisation, but troubleshooting and visibility become more complex.

**Malayalam support:** Network virtualization physical network- $\rightarrow$  virtual interfaces, switches, VLANs, overlays, policies  $\rightarrow$  abstract  $\rightarrow$  provisioning  $\rightarrow$  troubleshooting complexity  $\rightarrow$ .

### Study points

- List components and connect each to an isolation or forwarding role.

**Engineering / workplace application:** Virtual networks allow separate development, test, and production segments on shared infrastructure.

**Illustrative example:** A development VM can be placed on a virtual network that cannot reach production databases while still having controlled internet access.

**Common mistake:** A virtual network still depends on physical bandwidth, latency, and reliable underlay connectivity.

# Handbook treatment

M2.05 — Benefits and components of network virtualization (1 hours) should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

## Worked answer method

**Given:** the input conditions, required output, and any stated constraints.

**Required:** the logic sequence, program structure, truth table, or operating result.

**Method:** break the problem into named states or steps; evaluate them in order; test at least one alternate condition.

**Answer:** show the final sequence and state the expected output for each important condition.

### Exam answer blueprint

For a short-answer question on M2.05 — Benefits and components of network virtualization (1 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M2.05 — Benefits and components of network virtualization (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.05 — Benefits and components of network virtualization (1 hours)?
- How would you distinguish M2.05 — Benefits and components of network virtualization (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.05 — Benefits and components of network virtualization (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.05 — Benefits and components of network virtualization (1 hours) incorrect?

### Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

**Malayalam support:** M2.05 — Benefits and components of network virtualization (1 hours) താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ച് കൃത്യമായ technical term ഉപയോഗിച്ച് വിശദീകരിക്കുക. താഴെ പറയുന്ന definition ഉപയോഗിച്ച് principle, named parts/steps, application, limitation തുടങ്ങിയവ വിശദീകരിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിച്ച് വിശദീകരിക്കുക. Exam answer രീതിയിൽ concept-രീതിയിൽ വിശദീകരിക്കുക.

### Concept and explanation

A virtual switch forwards frames between VMs, the host, and physical uplinks. VLAN tagging logically separates broadcast domains on shared links. VM migration moves a VM between hosts; live migration attempts to keep service available while memory state and execution context are transferred. Successful migration requires compatible CPU features, shared or replicated storage, network continuity, and sufficient bandwidth.

**Malayalam support:** Virtual switch VM traffic forward ഏകദേശമായി; VLAN logical segmentation തിരിച്ചറിയുന്നു. Live migration downtime കുറയ്ക്കുന്ന VM host-യിൽ നിന്ന് host-യിൽ നിന്ന് മാറ്റം വരുത്തുന്നു; compatibility and bandwidth ഉറപ്പുവരുത്തുന്നു.

### Study points

- Explain virtual-switch forwarding, VLAN segmentation, and migration prerequisites.

**Engineering / workplace application:** Migration supports maintenance, load balancing, and host failure response.

**Illustrative example:** Before moving a VM, verify destination CPU compatibility, datastore access, virtual-network mapping, and resource availability.

**Common mistake:** Migration cannot overcome incompatible hardware, unavailable storage, or insufficient network capacity.

# Handbook treatment

M2.06 — Virtual switch, VLAN and VM migration services (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M2.06 — Virtual switch, VLAN and VM migration services (2 hours) using the official terminology retained above.
- Organise the important elements of M2.06 — Virtual switch, VLAN and VM migration services (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.06 — Virtual switch, VLAN and VM migration services (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on M2.06 — Virtual switch, VLAN and VM migration services (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M2.06 — Virtual switch, VLAN and VM migration services (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M2.06 — Virtual switch, VLAN and VM migration services (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M2.06 — Virtual switch, VLAN and VM migration services (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M2.06 — Virtual switch, VLAN and VM migration services (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.06 — Virtual switch, VLAN and VM migration services (2 hours)?
- How would you distinguish M2.06 — Virtual switch, VLAN and VM migration services (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.06 — Virtual switch, VLAN and VM migration services (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.06 — Virtual switch, VLAN and VM migration services (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M2.06 — Virtual switch, VLAN and VM migration services (2 hours) താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ച് കൃത്യമായ technical term ഉപയോഗിച്ച് വിശദീകരിക്കുക. definition, principle, named parts/steps, application, limitation എന്നിവ ഉൾക്കൊള്ളിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിച്ച് വിശദീകരിക്കുക. Exam answer രീതിയിൽ concept-ങ്ങൾ, പ്രശ്നം-പരിഹാരം എന്നിവ ഉൾക്കൊള്ളിക്കുക.

### Concept and explanation

Desktop virtualization centralises or abstracts the user desktop so the operating system and applications can be delivered from a data centre or managed platform. Advantages include centralised administration, controlled data location, standard images, remote access, and easier recovery. Limitations include network dependence, graphics and peripheral complexity, licensing, user-experience variability, and central infrastructure cost.

**Malayalam support:** Desktop virtualization central management and remote access ഐഐഐഐ. Network dependence, graphics/peripheral support, licensing, and central failure risk limitations ഐഐ.

### Study points

- Balance management benefits against latency, offline use, graphics, and infrastructure needs.

**Engineering / workplace application:** Call centres, laboratories, and managed enterprise desktops can benefit from standardised virtual desktops.

**Illustrative example:** A computer lab can provide a standard desktop image to many users while keeping data and updates centrally controlled.

**Common mistake:** Assuming a virtual desktop works well over any network ignores latency, bandwidth, and application requirements.

# Handbook treatment

M2.07 — Advantages and limitations of desktop virtualization (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M2.07 — Advantages and limitations of desktop virtualization (2 hours) using the official terminology retained above.
- Organise the important elements of M2.07 — Advantages and limitations of desktop virtualization (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.07 — Advantages and limitations of desktop virtualization (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on M2.07 — Advantages and limitations of desktop virtualization (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M2.07 — Advantages and limitations of desktop virtualization (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.

- What is M2.07 — Advantages and limitations of desktop virtualization (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.07 — Advantages and limitations of desktop virtualization (2 hours)?
- How would you distinguish M2.07 — Advantages and limitations of desktop virtualization (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.07 — Advantages and limitations of desktop virtualization (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.07 — Advantages and limitations of desktop virtualization (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M2.07 — Advantages and limitations of desktop virtualization (2 hours) താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ച് കൃത്യമായ technical term ഉപയോഗിച്ച് വിശദീകരിക്കുക. താഴെ പറയുന്ന definition ഉപയോഗിച്ച് principle, named parts/steps, application, limitation തുടങ്ങിയവയെ സംബന്ധിച്ച് വിശദീകരിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിച്ച് വിശദീകരിക്കുക. Exam answer രേഖപ്പെടുത്തുക concept-ബോക്സ് ഉപയോഗിച്ച്-ബോക്സ് ഉപയോഗിച്ച് വിശദീകരിക്കുക.

### Concept and explanation

Remote Desktop Services (RDS) commonly provides application or session access from a server where multiple users share an operating-system environment. Virtual Desktop Infrastructure (VDI) provides individual virtual desktops, often with persistent or non-persistent images. RDS can be efficient for standard applications; VDI offers stronger personal isolation and customisation but may need more resources.

**Malayalam support:** RDS-ൽ ഒരേ users server session share ചെയ്യുന്നു. VDI-ൽ ഏറ്റവും user-യ്ക്ക് individual virtual desktop ലഭിക്കുന്നു. RDS efficient; VDI പൂർണ്ണ isolation/customisation നൽകുന്നു.

### Study points

- Compare shared sessions with individual virtual desktops.

**Engineering / workplace application:** RDS is suitable for standard office applications; VDI suits users needing separate desktop environments.

**Illustrative example:** A training centre may use non-persistent VDI to reset every desktop after a session, while a lightweight office application may be delivered through RDS.

**Common mistake:** RDS and VDI are not identical delivery models, even though both are remote desktop technologies.

# Handbook treatment

M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours) using the official terminology retained above.
- Organise the important elements of M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours) into a logical sequence, classification, structure, or calculation.
- Connect M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Virtual Machines and Network, Desktop and Application Virtualization.
- Write an examination answer on M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

### Self-check questions

- What is M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours)?
- How would you distinguish M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours) from a closely related idea?
- Where would an engineer or technician encounter M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M2.08 — Techniques used for desktop virtualization: RDS and VDI (1 hours) താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ചുള്ള കൃത്യമായ technical term ഉപയോഗിക്കുക. definition ഉൾപ്പെടെ principle, named parts/steps, application, limitation ഉൾപ്പെടെ വിശദീകരിക്കുക. English terminology, symbols, units, diagram labels ഉൾപ്പെടെ ഉപയോഗിക്കുക. Exam answer ഉൾപ്പെടെ concept-ഉൾപ്പെടെ ഉപയോഗിക്കുക.

## — M2.09 — Components for desktop virtualization (1 hours)

### Concept and explanation

A desktop-virtualization system includes desktop images, brokers or connection managers, hypervisors, compute hosts, storage, identity and authentication, network services, profile management, endpoint devices, monitoring, and security controls. Performance depends on the image, user profile, application delivery, graphics path, storage I/O, and network latency.

**Malayalam support:** Desktop virtualization components image, broker, hypervisor, compute, storage, identity, network, endpoint, monitoring ഫലപ്രസാദം. User experience storage I/O and latency-ഫലപ്രസാദം.

### Study points

- Trace a user connection from endpoint through broker to the virtual desktop.

**Engineering / workplace application:** Centralised components support standard image updates, access control, and monitoring.

**Illustrative example:** A connection broker authenticates a user, selects an available desktop, and directs the endpoint to the correct VM.

**Common mistake:** Leaving identity, profile, or endpoint security out of the design creates operational gaps.

## – M2.10 — Advantages, limitations and tools of application virtualization (2 hours)

### Concept and explanation

Application virtualization separates an application from the host operating-system installation by packaging, streaming, isolating, or presenting it through a managed platform. It can reduce conflicts, simplify deployment, and support controlled updates. Limitations include driver and hardware integration, licensing, performance, packaging effort, and compatibility with every application. Tools may provide packaging, delivery, sandboxing, and lifecycle management.

**Malayalam support:** Application virtualization application-ാം host OS-ാം പാക്കേജ് package/stream/isolate ചെയ്തുകൊള്ളുന്നു. Deployment ചെയ്തുകൊള്ളുന്നു; drivers, licensing, compatibility പരിശോധിക്കുന്നു limitations ഉണ്ട്.

### Study points

- Compare application virtualization with a normal local installation.

**Engineering / workplace application:** Managed application delivery helps organisations update a common application version across many endpoints.

**Illustrative example:** A packaged application can be delivered to a user on demand without changing the base desktop image.

**Common mistake:** Virtualizing an application does not remove its security, license, or data-dependency requirements.

# Handbook treatment

M2.10 — Advantages, limitations and tools of application virtualization (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M2.10 — Advantages, limitations and tools of application virtualization (2 hours) using the official terminology retained above.
- Organise the important elements of M2.10 — Advantages, limitations and tools of application virtualization (2 hours) into a logical sequence, classification, structure, or calculation.

**Module summary:** VM and desktop technologies are useful only when resource, identity, network, storage, and user-experience requirements are considered together.

### OFFICIAL MODULE 3

## Cloud Computing and Architecture

Cloud computing combines accessible shared resources with automation, elasticity, service management, and measurable delivery. This module builds the architectural vocabulary needed to analyse cloud systems.

**Hours: 15**

**CO3 · Bloom level: Understanding**

**Handbook study routine:** Complete Module 3 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

### Official source coverage for Module 3

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

:

Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing  
Factors that Affect Cloud Computing – Cloud Data Centre Requirements – Architectural, Technological and Operational influences on Cloud Computing  
Cloud Computing Architecture – Cloud Computing Architecture based on Load Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration, Service Relocation, Cloud Balancing and Virtual Switch Load Balancing – Characteristics of Cloud Computing

### Point-by-point study guide

### Exact source point

**Syllabus text:** Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History –

## How to understand and study it

This point is an official syllabus requirement: “Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History –”. Begin with the exact definition or meaning, then identify the purpose, scope, and terminology contained in the point. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

## Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** syllabus point Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – technical terms English-medium. definition principle; term-function, difference, application Diagram, sequence, formula, unit revision.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – using the official terminology retained above.
- Organise the important elements of Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – into a logical sequence, classification, structure, or calculation.
- Connect Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History –. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History –, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History –, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History –?
- How would you distinguish Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – from a closely related idea?
- Where would an engineer or technician encounter Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History –, and what must be checked before using it?
- What common mistake would make an answer or operation involving Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Overview of Cloud Computing – Essentials of Cloud Computing – Needs – History – താഴെ topic നൽകുന്നതിനുള്ള ഉത്തരം exact technical term നൽകുന്നതിനുള്ള. ഉത്തരം definition നൽകുന്നതിനുള്ള principle, named parts/steps, application, limitation നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. ## – Official syllabus point 2: Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing

### Exact source point

**Syllabus text:** Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing

### How to understand and study it

This point is an official syllabus requirement: “Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing”. Prepare a comparison using the same criteria for every item: principle, performance, cost or complexity, limitation, and application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing ് technical terms English- ്. ് definition ് principle ്; ് term-ൿ function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing should be studied by linking structure, property, process, and application. The important question is why a material or process gives a particular behaviour and where that behaviour is useful or limiting.

## Learning objectives

- Define and scope Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing using the official terminology retained above.
- Organise the important elements of Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing into a logical sequence, classification, structure, or calculation.
- Connect Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing. It is a study organisation method, not an additional official syllabus requirement.

- Identify the material, process, property, or defect named in the topic.
- Explain the relevant structure or mechanism at the level expected in the syllabus.
- Relate the mechanism to strength, hardness, conductivity, corrosion, manufacturability, durability, or another stated property.
- Finish with selection criteria, application, limitation, and safety or quality consideration.

## Engineering application lens

In engineering practice, Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing affects selection, manufacturing quality, service life, inspection, and maintenance. A technically useful answer links the observed property or defect to its cause and then to the method used to control or exploit it.

## Worked answer method

**Given:** the material, process, property, or service condition in the question.

**Required:** explanation, comparison, selection, or identification of the relevant mechanism.

**Method:** state the principle; connect cause to property; compare alternatives using the same criteria; mention the relevant test or control.

**Answer:** give the conclusion with the application and the principal limitation.

### Exam answer blueprint

For a short-answer question on Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing?
- How would you distinguish Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing from a closely related idea?
- Where would an engineer or technician encounter Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing, and what must be checked before using it?
- What common mistake would make an answer or operation involving Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing incorrect?

### Common mistakes and safety emphasis

- Memorising a property without its unit, condition, or engineering meaning.
- Confusing a manufacturing process with a material property.
- Giving a comparison with different criteria for different materials.
- Ignoring defects, surface condition, heat treatment, environment, or quality control.

**Malayalam support:** Benefits – Limitations – Cloud Infrastructure – Vendors of Cloud Computing താഴെ topic നൽകുന്നതിനുള്ള ഉത്തരം exact technical term നൽകുന്നതിനുള്ള. ഉത്തരം definition നൽകുന്നതിനുള്ള principle, named parts/steps, application, limitation നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. English terminology, symbols, units, diagram labels നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. Exam answer നൽകുന്നതിനുള്ള concept-നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള.

## – Official syllabus point 3: Factors that Affect Cloud Computing – Cloud Data Centre Requirements –

### Exact source point

**Syllabus text:** Factors that Affect Cloud Computing – Cloud Data Centre Requirements –

### How to understand and study it

This point is an official syllabus requirement: “Factors that Affect Cloud Computing – Cloud Data Centre Requirements –”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Factors that Affect Cloud Computing – Cloud Data Centre Requirements – ് technical terms English- ്. ് definition ് principle ്; ് ് term-ൿ function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Factors that Affect Cloud Computing – Cloud Data Centre Requirements – is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Factors that Affect Cloud Computing – Cloud Data Centre Requirements – using the official terminology retained above.
- Organise the important elements of Factors that Affect Cloud Computing – Cloud Data Centre Requirements – into a logical sequence, classification, structure, or calculation.
- Connect Factors that Affect Cloud Computing – Cloud Data Centre Requirements – with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on Factors that Affect Cloud Computing – Cloud Data Centre Requirements – with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Factors that Affect Cloud Computing – Cloud Data Centre Requirements –. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Factors that Affect Cloud Computing – Cloud Data Centre Requirements – is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Factors that Affect Cloud Computing – Cloud Data Centre Requirements –, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Factors that Affect Cloud Computing – Cloud Data Centre Requirements –, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Factors that Affect Cloud Computing – Cloud Data Centre Requirements –?
- How would you distinguish Factors that Affect Cloud Computing – Cloud Data Centre Requirements – from a closely related idea?
- Where would an engineer or technician encounter Factors that Affect Cloud Computing – Cloud Data Centre Requirements –, and what must be checked before using it?
- What common mistake would make an answer or operation involving Factors that Affect Cloud Computing – Cloud Data Centre Requirements – incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Factors that Affect Cloud Computing – Cloud Data Centre Requirements – താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ച് കൃത്യമായ technical term ഉപയോഗിക്കുക. താഴെ പറയുന്ന definition ഉപയോഗിച്ച് principle, named parts/steps, application, limitation തുടങ്ങിയവയെ വിശദീകരിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിക്കുക. Exam answer രേഖപ്പെടുത്തുക concept-കളെക്കുറിച്ച് താഴെ പറയുന്നവയെക്കുറിച്ച്.

## — Official syllabus point 4: Architectural, Technological and Operational influences on Cloud Computing

### Exact source point

**Syllabus text:** Architectural, Technological and Operational influences on Cloud Computing

### How to understand and study it

This point is an official syllabus requirement: “Architectural, Technological and Operational influences on Cloud Computing”. Study the sequence from input or initial condition to operation and final output. Note the role of each named stage and the cause-and-effect relationship. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Write the operating sequence in numbered steps, including the input, intermediate action, and output.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Architectural, Technological, Operational influences on Cloud Computing ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Architectural, Technological and Operational influences on Cloud Computing should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

## Learning objectives

- Define and scope Architectural, Technological and Operational influences on Cloud Computing using the official terminology retained above.
- Organise the important elements of Architectural, Technological and Operational influences on Cloud Computing into a logical sequence, classification, structure, or calculation.
- Connect Architectural, Technological and Operational influences on Cloud Computing with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on Architectural, Technological and Operational influences on Cloud Computing with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Architectural, Technological and Operational influences on Cloud Computing. It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

## Engineering application lens

For engineering practice, Architectural, Technological and Operational influences on Cloud Computing matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

## Worked answer method

**Given:** the input conditions, required output, and any stated constraints.

**Required:** the logic sequence, program structure, truth table, or operating result.

**Method:** break the problem into named states or steps; evaluate them in order; test at least one alternate condition.

**Answer:** show the final sequence and state the expected output for each important condition.

### Exam answer blueprint

For a short-answer question on Architectural, Technological and Operational influences on Cloud Computing, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Architectural, Technological and Operational influences on Cloud Computing, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Architectural, Technological and Operational influences on Cloud Computing?
- How would you distinguish Architectural, Technological and Operational influences on Cloud Computing from a closely related idea?
- Where would an engineer or technician encounter Architectural, Technological and Operational influences on Cloud Computing, and what must be checked before using it?
- What common mistake would make an answer or operation involving Architectural, Technological and Operational influences on Cloud Computing incorrect?

### Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

**Malayalam support:** Architectural, Technological and Operational influences on Cloud Computing താഴെ topic നൽകുന്നതിനുള്ള ഉത്തരം exact technical term നൽകുന്നതിനുള്ള. ഉത്തരം definition നൽകുന്നതിനുള്ള principle, named parts/steps, application, limitation നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. English terminology, symbols, units, diagram labels നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. Exam answer നൽകുന്നതിനുള്ള concept-നൽകുന്നതിനുള്ള ഉത്തരം-നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള.

## – Official syllabus point 5: Cloud Computing Architecture – Cloud Computing Architecture based on Load

### Exact source point

**Syllabus text:** Cloud Computing Architecture – Cloud Computing Architecture based on Load

### How to understand and study it

This point is an official syllabus requirement: “Cloud Computing Architecture – Cloud Computing Architecture based on Load”. Study this as a structure: identify each named part, state its function, and explain how the parts are connected or arranged. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Draw a labelled arrangement or block diagram and write the function of every labelled part.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Cloud Computing Architecture – Cloud Computing Architecture based on Load ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Cloud Computing Architecture – Cloud Computing Architecture based on Load must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

## Learning objectives

- Define and scope Cloud Computing Architecture – Cloud Computing Architecture based on Load using the official terminology retained above.
- Organise the important elements of Cloud Computing Architecture – Cloud Computing Architecture based on Load into a logical sequence, classification, structure, or calculation.
- Connect Cloud Computing Architecture – Cloud Computing Architecture based on Load with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on Cloud Computing Architecture – Cloud Computing Architecture based on Load with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Cloud Computing Architecture – Cloud Computing Architecture based on Load. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

## Engineering application lens

In an engineering setting, Cloud Computing Architecture – Cloud Computing Architecture based on Load is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

## Worked answer method

**Given:** the quantities and conditions stated in the question.

**Required:** the unknown quantity, including its unit.

**Calculation:** write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.

**Answer:** report the result with a suitable number of significant figures and one sentence of interpretation.

### Exam answer blueprint

For a short-answer question on Cloud Computing Architecture – Cloud Computing Architecture based on Load, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Cloud Computing Architecture – Cloud Computing Architecture based on Load, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Cloud Computing Architecture – Cloud Computing Architecture based on Load?
- How would you distinguish Cloud Computing Architecture – Cloud Computing Architecture based on Load from a closely related idea?
- Where would an engineer or technician encounter Cloud Computing Architecture – Cloud Computing Architecture based on Load, and what must be checked before using it?
- What common mistake would make an answer or operation involving Cloud Computing Architecture – Cloud Computing Architecture based on Load incorrect?

### Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

**Malayalam support:** Cloud Computing Architecture - Cloud Computing Architecture based on Load  $\text{topic}$   $\text{exact technical term}$   $\text{definition}$   $\text{principle, named parts/steps, application, limitation}$   $\text{English terminology, symbols, units, diagram labels}$   $\text{Exam answer}$   $\text{concept-}$   $\text{-}$   $\text{}$   $\text{}$ .

## – Official syllabus point 6: Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration

### Exact source point

**Syllabus text:** Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration

### How to understand and study it

This point is an official syllabus requirement: “Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Balancing, Disk Provisioning, Storage Management, Hypervisor Installed ് technical terms English-്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration is a decision and coordination topic. Learn the definitions, then connect the planning inputs, method, output, performance measure, and corrective action.

## Learning objectives

- Define and scope Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration using the official terminology retained above.
- Organise the important elements of Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration into a logical sequence, classification, structure, or calculation.
- Connect Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration. It is a study organisation method, not an additional official syllabus requirement.

- Define the management term or objective.
- Identify the resources, constraints, people, information, and time involved.
- Describe the procedure or decision criteria in a logical sequence.
- Measure the result and state how deviations are controlled or improved.

## Engineering application lens

Engineering organisations apply Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration to deliver safe, economical, reliable, and timely work. A strong answer connects the method to productivity, quality, cost, schedule, customer requirement, compliance, or sustainability as appropriate.

## Worked answer method

**Given:** the project, process, resource, or organisational situation.

**Required:** plan, comparison, decision, or performance explanation.

**Method:** state objective → inputs → method → output → measure → corrective action.

**Answer:** finish with the likely benefit, limitation, and condition for successful implementation.

### Exam answer blueprint

For a short-answer question on Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration?
- How would you distinguish Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration from a closely related idea?
- Where would an engineer or technician encounter Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration, and what must be checked before using it?
- What common mistake would make an answer or operation involving Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration incorrect?

### Common mistakes and safety emphasis

- Listing management terms without a sequence or decision criterion.
- Ignoring constraints, measurement, responsibility, or feedback.
- Confusing an objective with an activity or a result with an input.
- Giving a generic benefit without linking it to the engineering situation.

**Malayalam support:** Balancing, Disk Provisioning, Storage Management, Hypervisor Installed, Migration താഴെ topic നൽകുന്നതിനുള്ള ഉത്തരം exact technical term നൽകുന്നതിനുള്ള. ഉത്തരം definition നൽകുന്നതിനുള്ള principle, named parts/steps, application, limitation നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. **Answer:** report the result with a suitable number of significant figures and one sentence of interpretation.

## Exam answer blueprint

For a short-answer question on Service Relocation, Cloud Balancing and Virtual Switch Load Balancing – Characteristics of Cloud Computing, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

## Self-check questions

- What is Service Relocation, Cloud Balancing and Virtual Switch Load Balancing – Characteristics of Cloud Computing, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Service Relocation, Cloud Balancing and Virtual Switch Load Balancing – Characteristics of Cloud Computing?
- How would you distinguish Service Relocation, Cloud Balancing and Virtual Switch Load Balancing – Characteristics of Cloud Computing from a closely related idea?
- Where would an engineer or technician encounter Service Relocation, Cloud Balancing and Virtual Switch Load Balancing – Characteristics of Cloud Computing, and what must be checked before using it?
- What common mistake would make an answer or operation involving Service Relocation, Cloud Balancing and Virtual Switch Load Balancing – Characteristics of Cloud Computing incorrect?

## Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.

- Rounding intermediate values so aggressively that the final answer changes.

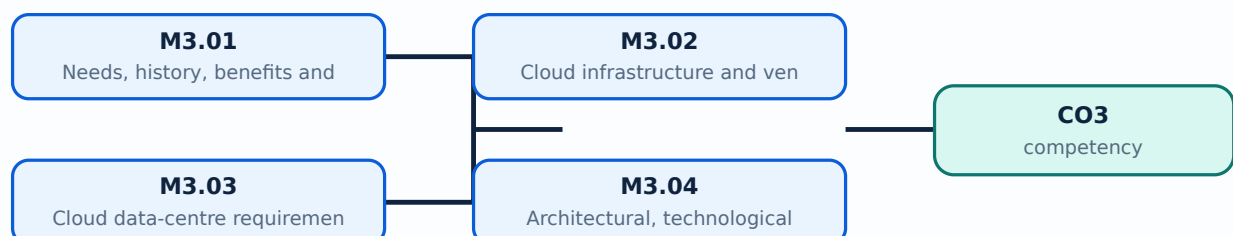

**Malayalam support:** Service Relocation, Cloud Balancing and Virtual Switch Load Balancing – Characteristics of Cloud Computing താഴെ topic തിരഞ്ഞെടുക്കുക exact technical term ഉപയോഗിക്കുക. definition ഉപയോഗിക്കുക principle, named parts/steps, application, limitation ഉപയോഗിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിക്കുക. Exam answer concept-ഉപയോഗിക്കുക ഉപയോഗിക്കുക.

## Learning goals

- Explain cloud needs, history, benefits, limitations, infrastructure, and vendors.
- Describe data-centre requirements and architectural, technological, and operational influences.
- Outline cloud architectures based on load balancing, storage, migration, and virtual-switch criteria.

## Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.

Learning map for Module module-3: the listed topics build the module competency.

### Concept and explanation

Cloud computing developed from time-sharing, distributed systems, virtualisation, utility computing, and internet-scale data centres. It addresses the need for scalable compute, storage, collaboration, rapid provisioning, and reduced upfront infrastructure. Benefits include elasticity, measured use, geographic access, and managed services. Limitations include dependency on connectivity and provider availability, data governance, latency, vendor lock-in, unpredictable cost, and shared-responsibility security.

**Malayalam support:** Cloud computing scalable compute/storage, rapid provisioning, remote access ക്ലൗഡ് കമ്പ്യൂട്ടിംഗ്. ക്ലൗഡ് connectivity, provider dependency, latency, data governance, lock-in, cost, security ക്ലൗഡ് സുരക്ഷാ സംവിധാനം.

### Study points

- Separate benefits from risks and relate each to an architecture decision.

**Engineering / workplace application:** Web applications, backup, analytics, education labs, and collaboration platforms use cloud resources.

**Illustrative example:** A small organisation may rent elastic compute for a seasonal workload instead of buying hardware that remains idle most of the year.

**Common mistake:** Cloud does not mean that security and cost management are automatically solved by the provider.

# Handbook treatment

M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours) using the official terminology retained above.
- Organise the important elements of M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours)?
- How would you distinguish M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M3.01 — Needs, history, benefits and limitations of cloud computing (3 hours) താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ച് കൃത്യമായ technical term ഉപയോഗിക്കുക. definition, principle, named parts/steps, application, limitation എന്നിവ ഉൾപ്പെടെ വിശദീകരിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിക്കുക. Exam answer concept-ബേസ്ഡ് ആയിരിക്കണം.

## – M3.02 — Cloud infrastructure and vendors (2 hours)

### Concept and explanation

Cloud infrastructure includes compute, storage, networking, identity, monitoring, management software, data centres, and service interfaces. Vendors expose these resources through consoles, APIs, automation tools, and service-level agreements. A vendor comparison should consider regions, availability zones, supported services, pricing, compliance, performance, migration options, and support. The syllabus names the concept of vendors rather than requiring one vendor-specific platform.

**Malayalam support:** Cloud infrastructure compute, storage, network, identity, monitoring, management, data centre ഐഐഐഐഐഐഐ ഐഐഐഐഐഐഐ. Vendor compare ഐഐഐഐഐഐഐ region, SLA, pricing, compliance, service support ഐഐഐഐ ഐഐഐഐ.

### Study points

- Identify infrastructure layers and vendor-evaluation criteria.

**Engineering / workplace application:** Application teams use cloud APIs and infrastructure-as-code to provision repeatable environments.

**Illustrative example:** A cloud design can select one region for low latency and a second region for disaster recovery, subject to cost and compliance.

**Common mistake:** A vendor name alone is not an architecture; services, locations, policies, and operating responsibilities must be specified.

# Handbook treatment

M3.02 — Cloud infrastructure and vendors (2 hours) should be studied by linking structure, property, process, and application. The important question is why a material or process gives a particular behaviour and where that behaviour is useful or limiting.

## Learning objectives

- Define and scope M3.02 — Cloud infrastructure and vendors (2 hours) using the official terminology retained above.
- Organise the important elements of M3.02 — Cloud infrastructure and vendors (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.02 — Cloud infrastructure and vendors (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on M3.02 — Cloud infrastructure and vendors (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M3.02 — Cloud infrastructure and vendors (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Identify the material, process, property, or defect named in the topic.
- Explain the relevant structure or mechanism at the level expected in the syllabus.
- Relate the mechanism to strength, hardness, conductivity, corrosion, manufacturability, durability, or another stated property.
- Finish with selection criteria, application, limitation, and safety or quality consideration.

## Engineering application lens

In engineering practice, M3.02 — Cloud infrastructure and vendors (2 hours) affects selection, manufacturing quality, service life, inspection, and maintenance. A technically useful answer links the observed property or defect to its cause and then to the method used to control or exploit it.

## Worked answer method

**Given:** the material, process, property, or service condition in the question.

**Required:** explanation, comparison, selection, or identification of the relevant mechanism.

**Method:** state the principle; connect cause to property; compare alternatives using the same criteria; mention the relevant test or control.

**Answer:** give the conclusion with the application and the principal limitation.

### Exam answer blueprint

For a short-answer question on M3.02 — Cloud infrastructure and vendors (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M3.02 — Cloud infrastructure and vendors (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.02 — Cloud infrastructure and vendors (2 hours)?
- How would you distinguish M3.02 — Cloud infrastructure and vendors (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.02 — Cloud infrastructure and vendors (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.02 — Cloud infrastructure and vendors (2 hours) incorrect?

### Common mistakes and safety emphasis

- Memorising a property without its unit, condition, or engineering meaning.
- Confusing a manufacturing process with a material property.
- Giving a comparison with different criteria for different materials.
- Ignoring defects, surface condition, heat treatment, environment, or quality control.

**Malayalam support:** M3.02 — Cloud infrastructure and vendors (2 hours)   
topic

### – M3.03 — Cloud data-centre requirements (2 hours)

#### Concept and explanation

A cloud data centre requires reliable power, cooling, physical security, fire protection, high-capacity network connectivity, compute and storage systems, monitoring, redundancy, access control, and operational procedures. Availability design uses fault domains, backup power, spare capacity, maintenance planning, and tested recovery. Environmental and energy efficiency are also important because data centres operate at large scale.

**Malayalam support:** Cloud data centre-ഉറപ്പ് power, cooling, physical security, fire protection, network, compute, storage, monitoring, redundancy ഉറപ്പുവരുത്തൽ ഉറപ്പുവരുത്തൽ. Availability-ഉറപ്പുവരുത്തൽ fault domain and recovery test ഉറപ്പുവരുത്തൽ.

#### Study points

- List facility, IT, security, and operational requirements.

**Engineering / workplace application:** Data-centre design affects availability, energy consumption, latency, and service continuity.

**Illustrative example:** A data centre may use dual power feeds, redundant network paths, and replicated storage to reduce single points of failure.

**Common mistake:** Redundant hardware without an operational recovery plan does not guarantee availability.

# Handbook treatment

M3.03 — Cloud data-centre requirements (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M3.03 — Cloud data-centre requirements (2 hours) using the official terminology retained above.
- Organise the important elements of M3.03 — Cloud data-centre requirements (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.03 — Cloud data-centre requirements (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on M3.03 — Cloud data-centre requirements (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M3.03 — Cloud data-centre requirements (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M3.03 — Cloud data-centre requirements (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M3.03 — Cloud data-centre requirements (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M3.03 — Cloud data-centre requirements (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.03 — Cloud data-centre requirements (2 hours)?
- How would you distinguish M3.03 — Cloud data-centre requirements (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.03 — Cloud data-centre requirements (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.03 — Cloud data-centre requirements (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

## – M3.04 — Architectural, technological and operational influences on cloud computing (3 hours)

### Concept and explanation

Architectural influences include service decomposition, multi-tenancy, elasticity, availability, and data locality. Technological influences include virtualisation, containers, software-defined networking, distributed storage, automation, and orchestration. Operational influences include monitoring, incident response, identity management, patching, cost control, compliance, backup, and change management. Cloud design succeeds when all three influence groups are aligned.

**Malayalam support:** Cloud architecture service decomposition and multi-tenancy-  
  
Technology virtualization, container, SDN, storage operation  
monitoring, identity, patching, cost, compliance

### Study points

- Classify a cloud decision as architectural, technological, or operational.

**Engineering / workplace application:** DevOps and site-reliability practices integrate deployment with monitoring and recovery.

**Illustrative example:** An autoscaling design needs both a technical mechanism and an operational policy for thresholds, alerts, budget, and incident response.

**Common mistake:** Choosing technology without an operating model creates unmanaged services and hidden risk.

# Handbook treatment

M3.04 — Architectural, technological and operational influences on cloud computing (3 hours) should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

## Learning objectives

- Define and scope M3.04 — Architectural, technological and operational influences on cloud computing (3 hours) using the official terminology retained above.
- Organise the important elements of M3.04 — Architectural, technological and operational influences on cloud computing (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.04 — Architectural, technological and operational influences on cloud computing (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on M3.04 — Architectural, technological and operational influences on cloud computing (3 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M3.04 — Architectural, technological and operational influences on cloud computing (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

## Engineering application lens

For engineering practice, M3.04 — Architectural, technological and operational influences on cloud computing (3 hours) matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

## Worked answer method

**Given:** the input conditions, required output, and any stated constraints.

**Required:** the logic sequence, program structure, truth table, or operating result.

**Method:** break the problem into named states or steps; evaluate them in order; test at least one alternate condition.

**Answer:** show the final sequence and state the expected output for each important condition.

### Exam answer blueprint

For a short-answer question on M3.04 — Architectural, technological and operational influences on cloud computing (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M3.04 — Architectural, technological and operational influences on cloud computing (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.04 — Architectural, technological and operational influences on cloud computing (3 hours)?
- How would you distinguish M3.04 — Architectural, technological and operational influences on cloud computing (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.04 — Architectural, technological and operational influences on cloud computing (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.04 — Architectural, technological and operational influences on cloud computing (3 hours) incorrect?

### Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

**Malayalam support:** M3.04 — Architectural, technological and operational influences on cloud computing (3 hours) താഴെ topic നൽകുന്നതിനുള്ള ഉത്തരം exact technical term നൽകുന്നതിനുള്ളതാണ്. ഉത്തരം definition നൽകുന്നതിനുള്ള principle, named parts/steps, application, limitation നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. English terminology, symbols, units, diagram labels നൽകുന്നതിനുള്ള ഉത്തരം നൽകുന്നതിനുള്ള. Exam answer നൽകുന്നതിനുള്ള concept-ഉത്തരം ഉത്തരം-ഉത്തരം ഉത്തരം ഉത്തരം നൽകുന്നതിനുള്ള.

### Concept and explanation

Cloud architecture can be analysed by load balancing, disk provisioning, storage management, installed hypervisor, migration, service relocation, cloud balancing, and virtual-switch load balancing. Load balancing distributes requests or workloads; disk provisioning allocates storage capacity and performance; migration and service relocation move workloads; cloud balancing spreads demand across resources or sites. The correct criterion depends on the bottleneck and service objective.

**Malayalam support:** Cloud architecture load, disk, storage, hypervisor, migration, service relocation, cloud balancing, virtual-switch load ഫലപ്രദത വർദ്ധിപ്പിക്കുന്നതിനായി ബോട്ടleneck കണ്ടെത്തൽ. Bottleneck and service objective നിർവ്വഹണ മാനദണ്ഡം പരിശോധന.

## Study points

- Explain how each criterion changes resource placement or traffic flow.

**Engineering / workplace application:** Web services use load balancers, while data platforms may prioritise storage throughput and replication.

**Illustrative example:** A load balancer can distribute stateless web requests, while a stateful database may need replication and connection-aware routing.

**Common mistake:** Balancing requests without checking database state or session behaviour can cause application errors.

# Handbook treatment

M3.05 — Cloud architecture based on different criteria (3 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M3.05 — Cloud architecture based on different criteria (3 hours) using the official terminology retained above.
- Organise the important elements of M3.05 — Cloud architecture based on different criteria (3 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.05 — Cloud architecture based on different criteria (3 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on M3.05 — Cloud architecture based on different criteria (3 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M3.05 — Cloud architecture based on different criteria (3 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M3.05 — Cloud architecture based on different criteria (3 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M3.05 — Cloud architecture based on different criteria (3 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M3.05 — Cloud architecture based on different criteria (3 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M3.05 — Cloud architecture based on different criteria (3 hours)?
- How would you distinguish M3.05 — Cloud architecture based on different criteria (3 hours) from a closely related idea?
- Where would an engineer or technician encounter M3.05 — Cloud architecture based on different criteria (3 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M3.05 — Cloud architecture based on different criteria (3 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

## – M3.06 — Characteristics of cloud computing (2 hours)

### Concept and explanation

Core characteristics include on-demand self-service, broad network access, resource pooling, rapid elasticity, and measured service. These characteristics distinguish a managed cloud service from a manually operated remote server. They require automation, identity controls, monitoring, metering, and a clear service boundary. Multi-tenancy also requires isolation and policy enforcement.

**Malayalam support:** On-demand, broad network access, resource pooling, rapid elasticity, measured service ക്ലൗഡ്-സേവനത്തിന്റെ പ്രത്യേകതകൾ. Automation and monitoring സാങ്കേതികവിദ്യകൾക്ക് സാധനങ്ങൾ.

### Study points

- Define each characteristic and give one observable example.

**Engineering / workplace application:** Measured service supports usage reporting and capacity planning.

**Illustrative example:** An elastic service can add instances when demand rises, then remove them after demand falls while recording resource usage.

**Common mistake:** Remote access alone does not prove that a system has all cloud characteristics.

# Handbook treatment

M3.06 — Characteristics of cloud computing (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M3.06 — Characteristics of cloud computing (2 hours) using the official terminology retained above.
- Organise the important elements of M3.06 — Characteristics of cloud computing (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M3.06 — Characteristics of cloud computing (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Computing and Architecture.
- Write an examination answer on M3.06 — Characteristics of cloud computing (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M3.06 — Characteristics of cloud computing (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M3.06 — Characteristics of cloud computing (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

#### OFFICIAL MODULE 4

## Cloud Models and Cloud Datacentres

This module organises cloud services and deployments and then follows the data-centre path through storage, core elements, backup, recovery, replication, and computing on demand.

**Hours: 14**

**CO4 · Bloom level: Understanding**

**Handbook study routine:** Complete Module 4 in three passes. First read the official source coverage and topic headings. Next study every Handbook treatment, writing the key definition, relationship, procedure, formula, diagram, or comparison in your own words. Finally close the notes and answer the self-check questions and the module questions without looking at the answer.

### Official source coverage for Module 4

Source basis: Official Contents block. Every point below is retained and linked to a study-oriented explanation. The main topic cards remain the primary lesson narrative.

View extracted official source transcript

s:

Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud  
Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud  
Storage

Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS,  
Compute,

Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and  
Disaster Recovery – Replication Technologies – Computing on Demand.

## Point-by-point study guide

## – Official syllabus point 1: Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud

### Exact source point

**Syllabus text:** Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud

### How to understand and study it

This point is an official syllabus requirement: “Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud ് technical terms English- ്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud using the official terminology retained above.
- Organise the important elements of Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud into a logical sequence, classification, structure, or calculation.
- Connect Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud?
- How would you distinguish Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud from a closely related idea?
- Where would an engineer or technician encounter Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud, and what must be checked before using it?
- What common mistake would make an answer or operation involving Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** Models of Cloud Computing – Cloud Service Models – SaaS – PaaS – IaaS – Cloud  $\square\square\square\square$  topic  $\square\square\square\square\square\square\square\square\square\square$   $\square\square\square\square$  exact technical term  $\square\square\square\square\square\square\square\square\square\square$ .  $\square\square\square\square$  definition  $\square\square\square\square\square\square\square\square\square$  principle, named parts/steps, application, limitation  $\square\square\square\square\square$   $\square\square\square\square\square\square\square$   $\square\square\square\square\square\square\square$ . ## – Official syllabus point 2: Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage

### Exact source point

**Syllabus text:** Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage

### How to understand and study it

This point is an official syllabus requirement: “Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage”. Record the relevant quantity, symbol, unit, relation or formula, and the interpretation of the result. Do not memorise a number without its unit and condition. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. Record the symbol, SI unit, governing relation, and one correctly labelled calculation.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Deployment Models – Public, Private, Community, Hybrid Clouds – Cloud Storage ് technical terms English- ്. ് definition ് principle ്; ് ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage must be learned as both a concept and a calculation procedure. The student should know what each quantity represents, the conditions under which a relation is valid, the unit of every quantity, and how to check whether the final answer is physically reasonable.

## Learning objectives

- Define and scope Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage using the official terminology retained above.
- Organise the important elements of Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage into a logical sequence, classification, structure, or calculation.
- Connect Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage. It is a study organisation method, not an additional official syllabus requirement.

- Identify the given quantities and write them with symbols and SI units.
- Select the governing definition, equation, graph, or relationship instead of starting with arithmetic.
- Substitute values only after checking units and the stated operating condition.
- Interpret the result in words and check its sign, magnitude, unit, and limiting behaviour.

## Engineering application lens

In an engineering setting, Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage is useful when a designer or technician must convert an observation into a measurable value, predict a response, compare alternatives, or verify that a component is operating within its rated condition. The practical question is always: what is measured or known, what is required, what model is appropriate, and how will the result be checked?

## Worked answer method

**Given:** the quantities and conditions stated in the question.

**Required:** the unknown quantity, including its unit.

**Calculation:** write the governing relation symbolically, substitute consistently converted values, and show the unit cancellation.

**Answer:** report the result with a suitable number of significant figures and one sentence of interpretation.

### Exam answer blueprint

For a short-answer question on Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage?
- How would you distinguish Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage from a closely related idea?
- Where would an engineer or technician encounter Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage, and what must be checked before using it?
- What common mistake would make an answer or operation involving Deployment Models – Public, Private, Community and Hybrid Clouds – Cloud Storage incorrect?

### Common mistakes and safety emphasis

- Using a memorised relation without checking its conditions.
- Mixing prefixes or units, such as milli, kilo, mega, seconds, minutes, or degrees.
- Reporting a numerical value without a unit or without explaining what it means.
- Rounding intermediate values so aggressively that the final answer changes.

## – Official syllabus point 3: Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute

### Exact source point

**Syllabus text:** Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute

### How to understand and study it

This point is an official syllabus requirement: “Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute”. Connect each named application to the technical concept: identify the requirement, the component or method used, and the result obtained. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Cloud Data Centre – Cloud Data Centre Core Elements (Application, Compute ് technical terms English- ്. ് definition ് principle ്; ് ് term-ൿ function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute using the official terminology retained above.
- Organise the important elements of Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute into a logical sequence, classification, structure, or calculation.
- Connect Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Cloud Data Centre – Cloud Data Centre Core Elements (Application, DBMS, Compute?

## – Official syllabus point 4: Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and

### Exact source point

**Syllabus text:** Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and

### How to understand and study it

This point is an official syllabus requirement: “Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Storage, Network) – Storage Network Technologies – Cloud Backup – Cloud and ് technical terms English- ്. ് definition ് principle ്; ് ് term-ൿ function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

## Learning objectives

- Define and scope Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and using the official terminology retained above.
- Organise the important elements of Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and into a logical sequence, classification, structure, or calculation.
- Connect Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and. It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

## Engineering application lens

For engineering practice, Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

## Worked answer method

**Given:** the input conditions, required output, and any stated constraints.

**Required:** the logic sequence, program structure, truth table, or operating result.

**Method:** break the problem into named states or steps; evaluate them in order; test at least one alternate condition.

**Answer:** show the final sequence and state the expected output for each important condition.

### Exam answer blueprint

For a short-answer question on Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and, begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and, and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and?
- How would you distinguish Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and from a closely related idea?
- Where would an engineer or technician encounter Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and, and what must be checked before using it?
- What common mistake would make an answer or operation involving Storage and Network) – Storage Network Technologies – Cloud Backup – Cloud and incorrect?

### Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

**Malayalam support:** Storage and Network) – Storage Network

Technologies – Cloud Backup – Cloud and topic exact technical term definition principle, named parts/steps, application, limitation English terminology, symbols, units, diagram labels Exam answer concept-

## – Official syllabus point 5: Disaster Recovery – Replication Technologies – Computing on Demand.

### Exact source point

**Syllabus text:** Disaster Recovery – Replication Technologies – Computing on Demand.

### How to understand and study it

This point is an official syllabus requirement: “Disaster Recovery – Replication Technologies – Computing on Demand.”. Treat every named term as an examinable subpoint. Define it, explain its role or behaviour, distinguish it from related terms, and connect it to the module application. The main topic explanation above gives the concept context; this point-by-point section ensures that each named item is revised separately.

### Study sequence

1. Write the exact technical term and a one-sentence definition in your own words.
2. List the named terms separately and add one distinguishing feature or engineering use for each.
3. Finish with one examination answer: definition, explanation, diagram/table if relevant, and application or limitation.

**Malayalam support:** ് syllabus point ് Disaster Recovery – Replication Technologies – Computing on Demand. ് technical terms English- ്. ് definition ് principle ്; ് term-് function, difference, application ്. Diagram, sequence, formula, unit ് revision ്.

**Exam focus:** Answer this point with its definition or principle first, followed by the named features, sequence, comparison, formula, diagram, or application that the question demands.

# Handbook treatment

Disaster Recovery – Replication Technologies – Computing on Demand. is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope Disaster Recovery – Replication Technologies – Computing on Demand. using the official terminology retained above.
- Organise the important elements of Disaster Recovery – Replication Technologies – Computing on Demand. into a logical sequence, classification, structure, or calculation.
- Connect Disaster Recovery – Replication Technologies – Computing on Demand. with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on Disaster Recovery – Replication Technologies – Computing on Demand. with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading Disaster Recovery – Replication Technologies – Computing on Demand.. It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of Disaster Recovery – Replication Technologies – Computing on Demand. is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on Disaster Recovery – Replication Technologies – Computing on Demand., begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is Disaster Recovery – Replication Technologies – Computing on Demand., and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining Disaster Recovery – Replication Technologies – Computing on Demand.?
- How would you distinguish Disaster Recovery – Replication Technologies – Computing on Demand. from a closely related idea?
- Where would an engineer or technician encounter Disaster Recovery – Replication Technologies – Computing on Demand., and what must be checked before using it?
- What common mistake would make an answer or operation involving Disaster Recovery – Replication Technologies – Computing on Demand. incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

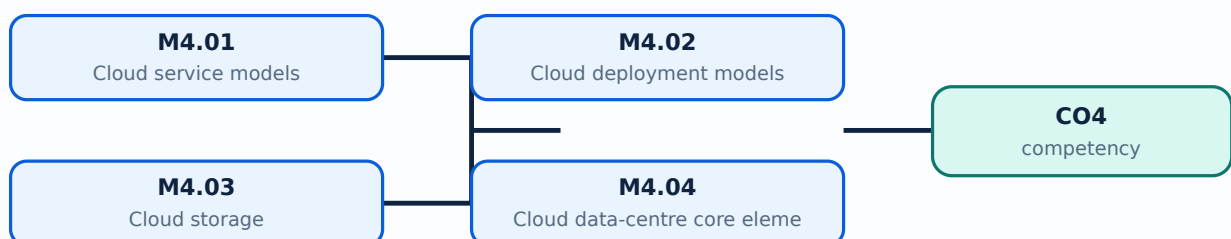

**Malayalam support:** Disaster Recovery – Replication Technologies – Computing on Demand. ുറുു ുറുു exact technical term ുറുു definition ുറുു principle, named parts/steps, application, limitation ുറുു ുറുു. English terminology, symbols, units, diagram labels ുറുു ുറുു. Exam answer ുറുു concept-ുറുു ുറുു-ുറുു ുറുു ുറുു.

## Learning goals

- Differentiate SaaS, PaaS, and IaaS and the public, private, community, and hybrid models.
- Identify cloud storage and data-centre core elements.
- Explain storage networks, backup, disaster recovery, replication, and on-demand computing.

## Module study tip

Read every topic in sequence, reproduce its example or procedure, and write a short explanation before attempting the module questions.

Learning map for Module module-4: the listed topics build the module competency.

### Concept and explanation

Infrastructure as a Service (IaaS) provides virtualised compute, storage, and networking for the customer to manage operating systems and applications. Platform as a Service (PaaS) provides a managed runtime and development platform. Software as a Service (SaaS) delivers a complete application to users. As the model moves from IaaS to SaaS, provider responsibility increases and customer control over underlying infrastructure decreases.

**Malayalam support:** IaaS-ന് customer OS/application manage ചെയ്യേണ്ടത്; PaaS-ന് runtime/platform provider manage ചെയ്യേണ്ടത്; SaaS-ന് complete application service നൽകേണ്ടത്. Control and responsibility ക്രമമായി മാറുന്നു.

### Study points

- Compare control, responsibility, and typical users across IaaS, PaaS, and SaaS.

**Engineering / workplace application:** A developer may choose PaaS to focus on code rather than server patching; an infrastructure team may choose IaaS for OS control.

**Illustrative example:** A managed database platform is closer to PaaS than raw virtual-machine IaaS because the provider manages database runtime operations.

**Common mistake:** Calling every hosted website SaaS without identifying the managed application boundary is imprecise.

# Handbook treatment

M4.01 — Cloud service models (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M4.01 — Cloud service models (2 hours) using the official terminology retained above.
- Organise the important elements of M4.01 — Cloud service models (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.01 — Cloud service models (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on M4.01 — Cloud service models (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M4.01 — Cloud service models (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M4.01 — Cloud service models (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M4.01 — Cloud service models (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M4.01 — Cloud service models (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.01 — Cloud service models (2 hours)?
- How would you distinguish M4.01 — Cloud service models (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.01 — Cloud service models (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.01 — Cloud service models (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M4.01 — Cloud service models (2 hours) താഴെ topic നൽകിയിരിക്കുന്നത് ഉപയോഗിച്ച് exact technical term നൽകിയിരിക്കുന്നു. താഴെ definition നൽകിയിരിക്കുന്നത് principle, named parts/steps, application, limitation നൽകിയിരിക്കുന്നു. English terminology, symbols, units, diagram labels നൽകിയിരിക്കുന്നു. Exam answer നൽകിയിരിക്കുന്നത് concept-നൽകിയിരിക്കുന്നു-നൽകിയിരിക്കുന്നു നൽകിയിരിക്കുന്നു.

## – M4.02 — Cloud deployment models (2 hours)

### Concept and explanation

Public cloud resources are offered to many customers by a provider. Private cloud is dedicated to one organisation. Community cloud is shared by organisations with common requirements. Hybrid cloud combines distinct environments with controlled integration, such as on-premises systems connected to public services. Deployment choice depends on control, compliance, cost, data sensitivity, elasticity, and existing infrastructure.

**Malayalam support:** Public, private, community, hybrid cloud models control ownership and sharing differently. Data sensitivity, compliance, cost, elasticity, and integration പരസ്പരം ബന്ധപ്പെട്ടതാണ്.

### Study points

- Define the four deployment models and give a suitable criterion for selection.

**Engineering / workplace application:** A hybrid design can keep regulated data in a private environment while using public cloud elasticity for a less sensitive workload.

**Illustrative example:** A private cloud can provide self-service within one organisation, while a public cloud serves multiple customer organisations.

**Common mistake:** Hybrid cloud is not simply two unrelated systems; integration, identity, network, and policy must be designed.

# Handbook treatment

M4.02 — Cloud deployment models (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M4.02 — Cloud deployment models (2 hours) using the official terminology retained above.
- Organise the important elements of M4.02 — Cloud deployment models (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.02 — Cloud deployment models (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on M4.02 — Cloud deployment models (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M4.02 — Cloud deployment models (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M4.02 — Cloud deployment models (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M4.02 — Cloud deployment models (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M4.02 — Cloud deployment models (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.02 — Cloud deployment models (2 hours)?
- How would you distinguish M4.02 — Cloud deployment models (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.02 — Cloud deployment models (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.02 — Cloud deployment models (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M4.02 — Cloud deployment models (2 hours) താഴെ topic നൽകിയിരിക്കുന്നത് ഉപയോഗിച്ച് exact technical term നൽകിയിരിക്കുന്നു. താഴെ definition നൽകിയിരിക്കുന്നത് principle, named parts/steps, application, limitation നൽകിയിരിക്കുന്നു. English terminology, symbols, units, diagram labels നൽകിയിരിക്കുന്നു. Exam answer നൽകിയിരിക്കുന്നത് concept-നൽകിയിരിക്കുന്നു-നൽകിയിരിക്കുന്നു നൽകിയിരിക്കുന്നു.

### Concept and explanation

Cloud storage abstracts physical disks into services such as object, block, or file storage. Object storage is suited to scalable unstructured data; block storage provides volumes for operating systems and databases; file storage provides shared hierarchical access. Important properties include durability, availability, latency, throughput, consistency, replication, access control, lifecycle, and cost. Storage selection must match the application access pattern.

**Malayalam support:** Object, block, file storage-അക്സസ്സ് പാറ്റേൺ തിരഞ്ഞെടുക്കൽ. Durability, availability, latency, throughput, consistency, replication, access control, cost തിരഞ്ഞെടുക്കൽ അപ്ലിക്കേഷൻ സ്റ്റോറേജ് പാറ്റേൺ തിരഞ്ഞെടുക്കൽ.

### Study points

- Match storage type to access pattern and performance need.

**Engineering / workplace application:** Backup archives often use object storage, while a VM operating-system disk uses block storage.

**Illustrative example:** A media archive may use object storage with lifecycle rules, while a transactional database may require low-latency block volumes.

**Common mistake:** High durability does not automatically mean fast access or immediate recovery.

# Handbook treatment

M4.03 — Cloud storage (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M4.03 — Cloud storage (2 hours) using the official terminology retained above.
- Organise the important elements of M4.03 — Cloud storage (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.03 — Cloud storage (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on M4.03 — Cloud storage (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M4.03 — Cloud storage (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M4.03 — Cloud storage (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M4.03 — Cloud storage (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M4.03 — Cloud storage (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.03 — Cloud storage (2 hours)?
- How would you distinguish M4.03 — Cloud storage (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.03 — Cloud storage (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.03 — Cloud storage (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M4.03 — Cloud storage (2 hours) താഴെ topic നൽകിയിരിക്കുന്നത് ഉപയോഗിച്ച് exact technical term നൽകിയിരിക്കുന്നു. താഴെ definition നൽകിയിരിക്കുന്നത് principle, named parts/steps, application, limitation നൽകിയിരിക്കുന്നു. English terminology, symbols, units, diagram labels നൽകിയിരിക്കുന്നു. Exam answer നൽകിയിരിക്കുന്നത് concept-നൽകി നൽകിയിരിക്കുന്നു.

## – M4.04 — Cloud data-centre core elements (2 hours)

### Concept and explanation

The core elements are applications, database management systems, compute, storage, and network. Applications generate service requests; DBMS components manage structured data; compute runs code; storage retains data; network connects users and services. Identity, monitoring, security, backup, and operations support all five. A bottleneck in one element can limit the complete service.

**Malayalam support:** Application, DBMS, compute, storage, network എന്നിവ cloud data-centre-യുടെ core elements ആണ്. ഈ ഏകദേശപരമായ dependency ഏകദേശപരമായതാണ്.

### Study points

- Trace a request across application, database, compute, storage, and network.

**Engineering / workplace application:** Three-tier applications separate presentation, application logic, and database responsibilities.

**Illustrative example:** A user request may enter through a network load balancer, reach application compute, query a DBMS, and retrieve an object from storage.

**Common mistake:** Scaling compute alone does not fix a database, storage, or network bottleneck.

# Handbook treatment

M4.04 — Cloud data-centre core elements (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M4.04 — Cloud data-centre core elements (2 hours) using the official terminology retained above.
- Organise the important elements of M4.04 — Cloud data-centre core elements (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.04 — Cloud data-centre core elements (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on M4.04 — Cloud data-centre core elements (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M4.04 — Cloud data-centre core elements (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M4.04 — Cloud data-centre core elements (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M4.04 — Cloud data-centre core elements (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M4.04 — Cloud data-centre core elements (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.04 — Cloud data-centre core elements (2 hours)?
- How would you distinguish M4.04 — Cloud data-centre core elements (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.04 — Cloud data-centre core elements (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.04 — Cloud data-centre core elements (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M4.04 — Cloud data-centre core elements (2 hours) താഴെ  
topic നൽകിയിരിക്കുന്നവയിൽ ഏതെങ്കിലും exact technical term നൽകിയിരിക്കുന്നവയിൽ. താഴെ definition  
നൽകിയിരിക്കുന്നവയിൽ principle, named parts/steps, application, limitation നൽകിയിരിക്കുന്നവയിൽ

നൽകിയിരിക്കുന്നു.

### Concept and explanation

Storage networking connects servers to storage using direct, network-attached, or storage-area architectures. Technologies and protocols may provide block, file, or object access with different latency, sharing, scalability, and management characteristics. Design considers bandwidth, redundancy, zoning or access control, multipathing, failure recovery, and monitoring. The storage network should not become an unnoticed single point of failure.

**Malayalam support:** Storage network server-ഉടമസ്ഥത storage-ഉടമസ്ഥത connect ഉറപ്പുവരുത്തുന്നു. Block/file/object access, bandwidth, redundancy, multipathing, zoning, monitoring ഉറപ്പുവരുത്തുന്നു design-ഉറപ്പുവരുത്തുന്നു ഉറപ്പുവരുത്തുന്നു.

### Study points

- Compare direct, network-attached, and storage-area approaches at a conceptual level.

**Engineering / workplace application:** Virtualised data centres use shared storage and redundant paths for migration and availability.

**Illustrative example:** Multipathing allows a server to reach storage through more than one path and continue after a path failure.

**Common mistake:** A shared storage device without redundant paths can still fail as a service during a link or controller problem.

# Handbook treatment

M4.05 — Storage network technologies (2 hours) should be understood as an information-flow problem. Identify the input, the rule or program that processes it, the internal state or decision, and the output. A correct explanation must show the sequence, not merely list software terms.

## Learning objectives

- Define and scope M4.05 — Storage network technologies (2 hours) using the official terminology retained above.
- Organise the important elements of M4.05 — Storage network technologies (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.05 — Storage network technologies (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on M4.05 — Storage network technologies (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M4.05 — Storage network technologies (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- List the input signals, data, or conditions.
- Write the logic, algorithm, instruction sequence, or protocol rule in the order it is evaluated.
- State the output and identify what changes when an input or state changes.
- Test a normal case, a boundary case, and a fault or invalid-input case.

## Engineering application lens

For engineering practice, M4.05 — Storage network technologies (2 hours) matters because an automated or digital system must convert inputs into repeatable outputs. The technician should be able to trace a signal or data item, locate the decision that controls the result, and identify a safe response when an input is missing or abnormal.

## Worked answer method

**Given:** the input conditions, required output, and any stated constraints.

**Required:** the logic sequence, program structure, truth table, or operating result.

**Method:** break the problem into named states or steps; evaluate them in order; test at least one alternate condition.

**Answer:** show the final sequence and state the expected output for each important condition.

### Exam answer blueprint

For a short-answer question on M4.05 — Storage network technologies (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M4.05 — Storage network technologies (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.05 — Storage network technologies (2 hours)?
- How would you distinguish M4.05 — Storage network technologies (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.05 — Storage network technologies (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.05 — Storage network technologies (2 hours) incorrect?

### Common mistakes and safety emphasis

- Writing instructions without defining the input and output.
- Ignoring scan order, state retention, initialization, or boundary conditions.
- Confusing a logical condition with the physical signal that represents it.
- Testing only the normal case and failing to consider a fault or interlock condition.

**Malayalam support:** M4.05 — Storage network technologies (2 hours) താഴെ  
topic നൽകിയിരിക്കുന്നവയിൽ ഏതെങ്കിലും exact technical term നൽകിയിരിക്കുന്നു. താഴെ definition  
നൽകിയിരിക്കുന്ന principle, named parts/steps, application, limitation നൽകിയിരിക്കുന്ന  
നൽകിയിരിക്കുന്നു. English terminology, symbols, units, diagram labels നൽകിയിരിക്കുന്നു  
നൽകിയിരിക്കുന്നു. Exam answer നൽകിയിരിക്കുന്ന concept-നൽകിയിരിക്കുന്ന നൽകിയിരിക്കുന്നു  
നൽകിയിരിക്കുന്നു.

## – M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours)

### Concept and explanation

Backup creates recoverable copies according to a retention and recovery objective. Disaster recovery restores service after a major disruption using alternate resources, procedures, and tested runbooks. Replication maintains copies or synchronised state at another location or system. Recovery Point Objective (RPO) expresses tolerable data loss in time; Recovery Time Objective (RTO) expresses tolerable restoration time. Backup, replication, and disaster recovery are related but not interchangeable.

**Malayalam support:** Backup copy കോപ്പി; replication copies state കോപ്പി; disaster recovery service restore പരിപാടി complete plan പരിപാടി. RPO data loss tolerance; RTO restore time tolerance പരിപാടി.

### Study points

- Differentiate backup, replication, RPO, and RTO.

**Engineering / workplace application:** Financial, education, and public services use tested recovery plans to reduce downtime and data loss.

**Illustrative example:** If RPO is 15 minutes, the design must limit recoverable data loss to about 15 minutes under the stated failure scenario.

**Common mistake:** Replication can copy corruption or deletion; an independent, protected backup remains necessary.

# Handbook treatment

M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours) using the official terminology retained above.
- Organise the important elements of M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours)?
- How would you distinguish M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M4.06 — Cloud backup, disaster recovery and replication technologies (2 hours) താഴെ പറയുന്ന വിഷയം സംബന്ധിച്ചുള്ള കൃത്യമായ technical term ഉപയോഗിക്കുക. definition ഉൾപ്പെടെ principle, named parts/steps, application, limitation എന്നിവ ഉൾപ്പെടെ വിശദീകരിക്കുക. English terminology, symbols, units, diagram labels ഉപയോഗിക്കുക. Exam answer ഉൾപ്പെടെ concept-എന്നത് ഉൾപ്പെടെ-എന്നത് ഉൾപ്പെടെ വിശദീകരിക്കുക.

### Concept and explanation

Computing on demand supplies processing resources when needed and releases them when the workload falls. It may use virtual machines, containers, serverless execution, batch resources, or autoscaling groups. The design must define triggers, quotas, identity, cost limits, startup time, data locality, and shutdown behaviour. On-demand computing is valuable for variable, seasonal, experimental, and burst workloads.

**Malayalam support:** Demand ഐക്യകാലം compute provision ഐക്യകാലം workload ഐക്യകാലം release ഐക്യകാലം ഐക്യകാലം. Autoscaling, quotas, cost limits, startup time, data locality ഐക്യകാലം ഐക്യകാലം.

### Study points

- Explain provisioning, scaling, quota, and release decisions.

**Engineering / workplace application:** Batch analytics and seasonal web traffic can use temporary capacity instead of permanent hardware.

**Illustrative example:** A web tier can add instances when average request latency crosses a threshold and remove them after demand remains low.

**Common mistake:** Autoscaling without limits can create unexpected cost or overload a dependent service.

# Handbook treatment

M4.07 — Computing on demand (2 hours) is an official examinable part of the module. Study it as a connected explanation: define the central term, identify the related elements, explain their relationship, and finish with a relevant engineering use or limitation.

## Learning objectives

- Define and scope M4.07 — Computing on demand (2 hours) using the official terminology retained above.
- Organise the important elements of M4.07 — Computing on demand (2 hours) into a logical sequence, classification, structure, or calculation.
- Connect M4.07 — Computing on demand (2 hours) with one engineering decision, operation, measurement, or safety requirement in the context of Cloud Models and Cloud Datacentres.
- Write an examination answer on M4.07 — Computing on demand (2 hours) with a clear opening, technical middle, and final application or limitation.

## Conceptual framework

Use the following frame while reading M4.07 — Computing on demand (2 hours). It is a study organisation method, not an additional official syllabus requirement.

- Start with the exact technical term and its scope.
- Separate the topic into named elements, stages, types, or conditions.
- Explain the relationship using cause-and-effect, sequence, comparison, or a labelled representation.
- Apply the idea to a realistic engineering situation and state one limitation or common mistake.

## Engineering application lens

The engineering value of M4.07 — Computing on demand (2 hours) is understood by asking what requirement it satisfies, what input or condition it depends on, how the output is obtained, and how a technician or designer verifies the result. Use the module context to make the application specific rather than memorising an isolated definition.

## Worked answer method

**Given:** the topic, operating condition, diagram, data, or situation stated in the question.

**Required:** definition, explanation, comparison, procedure, calculation, or application as requested.

**Method:** organise the answer under principle, named elements, sequence or relationship, and application.

**Answer:** use the requested technical terms, units, labels, assumptions, and a concluding statement.

### Exam answer blueprint

For a short-answer question on M4.07 — Computing on demand (2 hours), begin with the definition or principle and include the decisive feature. For a medium-answer question, add the named elements and their functions or sequence. For a long-answer question, add a labelled diagram, comparison, formula or procedure where relevant, one application, and one limitation or safety point. Never substitute a list of headings for the explanation.

### Self-check questions

- What is M4.07 — Computing on demand (2 hours), and what is its scope in this module?
- Which elements, stages, types, quantities, or conditions must be named when explaining M4.07 — Computing on demand (2 hours)?
- How would you distinguish M4.07 — Computing on demand (2 hours) from a closely related idea?
- Where would an engineer or technician encounter M4.07 — Computing on demand (2 hours), and what must be checked before using it?
- What common mistake would make an answer or operation involving M4.07 — Computing on demand (2 hours) incorrect?

### Common mistakes and safety emphasis

- Copying a definition without explaining the mechanism or purpose.
- Listing terms without showing their relationship.
- Using an example that does not match the stated topic or condition.
- Leaving out a diagram, unit, assumption, limitation, or safety point when the question requires it.

**Malayalam support:** M4.07 — Computing on demand (2 hours) താഴെ വിഷയം ഉൾക്കൊള്ളുന്ന കൃത്യമായ technical term ഉൾക്കൊള്ളുന്നതാണ്. താഴെ definition ഉൾക്കൊള്ളുന്ന principle, named parts/steps, application, limitation ഉൾക്കൊള്ളുന്നതാണ്. English terminology, symbols, units, diagram labels ഉൾക്കൊള്ളുന്നതാണ്. Exam answer ഉൾക്കൊള്ളുന്ന concept-ഉൾക്കൊള്ളുന്നതാണ്. ഉൾക്കൊള്ളുന്നതാണ്.

**Module summary:** Cloud models describe who manages what, while data-centre technologies make storage, recovery, and on-demand service possible.

## Formula and Notation Bank

**Formula note:** The supplied syllabus is primarily procedural or conceptual and does not prescribe a compulsory numerical formula bank. Focus on the official terminology, sequences, records, and practical demonstrations listed in the modules.

## Diagram Library for Rapid Revision

|                                                                            |                                            |

## Official Activities and Practical Requirements

**Official activities / self-learning**

- The supplied syllabus does not provide a separate official self-learning activity list for this theory course. Use the topic procedures, worked examples, and module questions in this lesson for structured study.

### Practical requirements / equipment

- The supplied syllabus does not prescribe separate practical equipment for this theory course.

## Assessment Methodology

Official assessment information is reproduced below from the supplied syllabus.

- Series Test: 2 hours as listed in the Course Outcomes table.
- Source anomaly: The course outline separately lists Series Test I and Series Test II as 1 hour within Modules 2 and 4, while the Course Outcomes table separately lists Series Test as 2 hours; these official values are preserved.
- No separate CIE/ESE mark distribution is stated in the supplied PDF.

## Module-wise Questions and Answers

### module-1 — Virtualization and Hypervisors

#### 1. Explain Virtualization and its importance. [3 marks]

Virtualization presents a logical computing resource independently of its physical implementation. A virtual machine can receive virtual CPU, memory, storage, and network interfaces while the physical host allocates real resources. It improves server utilisation, isolation, testing, portability, provisioning speed, and disaster recovery, but introduces overhead, management complexity, and dependence on the host platform.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

#### 2. Explain Virtualization and Cloud Computing. [3 marks]

Virtualization is an enabling technology for cloud computing, but the concepts are not identical. Cloud computing adds on-demand self-service, resource pooling, measured service, elasticity, and network access. A cloud platform can use virtual machines, containers, physical servers, or combinations; virtualization provides an efficient way to allocate and isolate many of those resources.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

### 3. Explain Virtualization software operation and types of virtualization. [3 marks]

Virtualization software intercepts or manages privileged operations, maps guest resources to host resources, schedules virtual CPUs, translates memory addresses, and connects virtual devices to storage and networks. Types include server or hardware virtualization, storage virtualization, network virtualization, desktop virtualization, application virtualization, and operating-system-level approaches. The implementation may use full virtualization, para-virtualization, or hardware assistance.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

### 4. Explain Hypervisors and types. [3 marks]

A hypervisor, or virtual-machine monitor, creates and manages virtual machines. Type 1 hypervisors run directly on hardware and are common in data-centre servers. Type 2 hypervisors run above a host operating system and are convenient for desktop development or laboratory use. Both must schedule CPU time, protect memory, provide virtual devices, and manage VM lifecycle. Hardware-assisted virtualization can reduce the cost of privileged instruction handling.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

## module-2 — Virtual Machines and Network, Desktop and Application Virtualization

### 5. Explain Virtual machines. [3 marks]

A virtual machine is an isolated software-defined computer with virtual hardware, a guest operating system, applications, virtual disks, and network interfaces. The VM configuration records assigned CPU, memory, storage, firmware, boot order, and device connections. A VM lifecycle includes creation, installation, start, suspend, snapshot, clone, migration, and retirement. Isolation is logical and must be supported by secure hypervisor configuration.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

## 6. Explain Examining CPUs, memory, network and storage in a VM. [3 marks]

CPU allocation includes virtual processors, shares, limits, or reservations. Memory allocation must account for guest needs, hypervisor overhead, and possible overcommitment. A VM network interface connects to a virtual switch or virtual network, while virtual storage maps to a virtual disk backed by a datastore or file. Examination means checking configured and actual utilisation, not only the maximum assigned value.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

## 7. Explain VM clones, templates and snapshots. [3 marks]

A clone is a copy of a VM, a template is a prepared master image used for repeated deployment, and a snapshot records a point-in-time VM state or disk relationship for short-term rollback. Templates improve consistency; clones create independent environments; snapshots are useful before a controlled change but can grow and affect performance. Identity, network address, and licensing must be handled when copying a VM.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

## 8. Explain Open Virtualization Format. [3 marks]

Open Virtualization Format (OVF) packages describe virtual appliances using portable metadata and disk images. The package can record virtual hardware requirements, network mappings, and deployment information. Portability still depends on hypervisor compatibility, guest drivers, licensing, and supported virtual hardware. OVF or related appliance formats simplify distribution of prepared virtual machines.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

## module-3 — Cloud Computing and Architecture

### 9. Explain Needs, history, benefits and limitations of cloud computing. [3 marks]

Cloud computing developed from time-sharing, distributed systems, virtualisation, utility computing, and internet-scale data centres. It addresses the need for scalable compute, storage, collaboration, rapid provisioning, and reduced upfront infrastructure. Benefits include elasticity, measured use, geographic access, and managed services. Limitations include dependency on connectivity and provider availability, data governance, latency, vendor lock-in, unpredictable cost, and shared-responsibility security.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

### 10. Explain Cloud infrastructure and vendors. [3 marks]

Cloud infrastructure includes compute, storage, networking, identity, monitoring, management software, data centres, and service interfaces. Vendors expose these resources through consoles, APIs, automation tools, and service-level agreements. A vendor comparison should consider regions, availability zones, supported services, pricing, compliance, performance, migration options, and support. The syllabus names the concept of vendors rather than requiring one vendor-specific platform.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

### 11. Explain Cloud data-centre requirements. [3 marks]

A cloud data centre requires reliable power, cooling, physical security, fire protection, high-capacity network connectivity, compute and storage systems, monitoring, redundancy, access control, and operational procedures. Availability design uses fault domains, backup power, spare capacity, maintenance planning, and tested recovery. Environmental and energy efficiency are also important because data centres operate at large scale.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

## 12. Explain Architectural, technological and operational influences on cloud computing. [3 marks]

Architectural influences include service decomposition, multi-tenancy, elasticity, availability, and data locality. Technological influences include virtualisation, containers, software-defined networking, distributed storage, automation, and orchestration. Operational influences include monitoring, incident response, identity management, patching, cost control, compliance, backup, and change management. Cloud design succeeds when all three influence groups are aligned.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

## module-4 — Cloud Models and Cloud Datacentres

### 13. Explain Cloud service models. [3 marks]

Infrastructure as a Service (IaaS) provides virtualised compute, storage, and networking for the customer to manage operating systems and applications. Platform as a Service (PaaS) provides a managed runtime and development platform. Software as a Service (SaaS) delivers a complete application to users. As the model moves from IaaS to SaaS, provider responsibility increases and customer control over underlying infrastructure decreases.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

### 14. Explain Cloud deployment models. [3 marks]

Public cloud resources are offered to many customers by a provider. Private cloud is dedicated to one organisation. Community cloud is shared by organisations with common requirements. Hybrid cloud combines distinct environments with controlled integration, such as on-premises systems connected to public services. Deployment choice depends on control, compliance, cost, data sensitivity, elasticity, and existing infrastructure.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

### 15. Explain Cloud storage. [3 marks]

Cloud storage abstracts physical disks into services such as object, block, or file storage. Object storage is suited to scalable unstructured data; block storage provides volumes for operating systems and databases; file storage provides shared hierarchical access. Important properties include durability, availability, latency, throughput, consistency, replication, access control, lifecycle, and cost. Storage selection must match the application access pattern.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

### 16. Explain Cloud data-centre core elements. [3 marks]

The core elements are applications, database management systems, compute, storage, and network. Applications generate service requests; DBMS components manage structured data; compute runs code; storage retains data; network connects users and services. Identity, monitoring, security, backup, and operations support all five. A bottleneck in one element can limit the complete service.

**Exam focus:** State the definition or purpose, explain the working or sequence, and add one application or caution.

## Practice Model Question Paper

### Practice Model Paper — Not an Official Examination Paper

This paper is generated from the supplied module coverage for revision and does not claim to reproduce the official examination pattern.

1. Define or explain *Virtualization and its importance* with one relevant application. (5 marks)
2. Define or explain *Virtualization and Cloud Computing* with one relevant application. (5 marks)
3. Define or explain *Virtual machines* with one relevant application. (5 marks)
4. Define or explain *Examining CPUs, memory, network and storage in a VM* with one relevant application. (5 marks)
5. Define or explain *Needs, history, benefits and limitations of cloud computing* with one relevant application. (5 marks)
6. Define or explain *Cloud infrastructure and vendors* with one relevant application. (5 marks)

7. **7.** Define or explain *Cloud service models* with one relevant application. (5 marks)

8. **8.** Define or explain *Cloud deployment models* with one relevant application. (5 marks)

**Writing advice:** Use headings, standard terminology, and labelled diagrams or procedures where relevant.

## Quick Revision

### Module-wise key points

- **Virtualization and Hypervisors:** Virtualization abstracts resources; the hypervisor allocates and protects them so virtual machines can operate predictably.
- **Virtual Machines and Network, Desktop and Application Virtualization:** VM and desktop technologies are useful only when resource, identity, network, storage, and user-experience requirements are considered together.
- **Cloud Computing and Architecture:** Cloud architecture is a combination of resources, automation, service characteristics, and operational controls rather than a single product.
- **Cloud Models and Cloud Datacentres:** Cloud models describe who manages what, while data-centre technologies make storage, recovery, and on-demand service possible.

### Exam checklist

- Write the official terminology before adding explanation.
- Use a labelled diagram or step sequence when it improves the answer.
- Check conditions, boundaries, safety, hygiene, and documentation points.
- Separate official syllabus information from your own example.

**Last-minute revision:** Review the coverage table, formula bank, diagram library, and common-mistake notes inside every topic.

## Glossary

### Technical glossary
