MODEL QUESTION PAPER

TELECOMMUNICATION SWITCHING SYSTEM

TIME 3 HRS

Marks 100

PART A

Answer all Questions

I

1. Define Sampling Theorem.
2. What is meant by half duplex communication?
3. What is Erlang?
4. What is the difference between PCM and DPCM?
5. Define Ad-hoc wireless network.

(5x2 =10)

PART B

(Answer any 5 Questions)

II

1. Differentiate between Synchronous & Asynchronous Data Transmission.
2. Explain checksum method of error correction.
3. What are the steps involved in Call connection sequence? Explain.
4. Explain multichannel PCM
5. What is OLTE? Explain.
6. Compare SSP and SCP
7. What are the basic STP functions?

(5x6 =30)

PART C

(Answer one Full question from each module)

MODULE I

III

a Explain CSMA CD

(6)

b Discuss WAN and LAN

(9)

OR

IV

- a Explain Media Access control (6)
- b Explain Manchester code for communication. (9)

V

MODULE II

- a Draw the block diagram of Time Division time Switching and explain (9)
- b What are the advantages of Digital switching? (6)

OR

VI

- a With block diagram explain the working of SPC Exchange. (9)
- b An Exchange has 6000 subscribers. If average Busy hour Call Attempt is 20000 and CCR is 60% calculate BHCR. (6)

VII

MODULE III

- a. Explain the higher order multiplexing techniques (9)
- b. Describe SDH and its advantages (6)

OR

VIII

- a Compare TDM and FDM (6)
- b. What is the need for synchronization? Explain frame synchronization (9)

IX

MODULE IV

- a Explain CCS network Architecture (9)
- b Write short notes on Service Control Point (6)

OR

X

- a Explain any 3 applications of Ad-hoc Network . (15)

(15x4 =60)
