

COURSE TITLE	:	NETWORK PROGRAMMING LAB
COURSE CODE	:	5159
COURSE CATEGORY	:	A
PERIODS/WEEK	:	4
PERIODS/SEMESTER	:	52
CREDITS	:	2

List of Experiments

1. To apply the Concepts of Object Oriented Programming through java.
2. To apply Inheritance, Interfaces, Arrays and packages.
3. To apply Multithreading and Exceptions.
4. To apply Stream classes, Files and Swing Concepts.
5. To apply the concept of network programming
 - Write programs to retrieve host name, IP address using methods in Inet Address class.
6. To apply GUI programming with AWT and Swing
 - 2 Develop applet programs using AWT components.
 - 3 Develop AWT programs to implement event handling concepts.
 - 4 Develop applet programs using Swing components.
 - 5 Develop Swing programs to implement event handling concepts.
7. To apply the concept of URL and Client-server programming using sockets
 1. Develop programs to display the properties of URL.
 2. Write Java programs to read and write from the URL
 3. Write socket based programs using TCP.
 4. Write socket based programs using UDP.
8. To apply RMI programming concepts
 1. Implement programs using RMI.
