

COURSE TITLE	: APPLICATION DEVELOPMENT LAB - III (MOBILE)
COURSE CODE	: 6268
COURSE CATEGORY	: A
PERIODS/WEEK	: 5
PERIODS/SEMESTER	: 75
CREDITS	: 3

Software Requirement: HTML5, CSS3, javaScript, Ionic Framework, AngularJS, Apache Cordova

Course General Outcomes:

To develop a user friendly Mobile Application using HTML5, CSS3, javaScript, Ionic Framework, AngularJS, Apache Cordova

Specific Outcomes:for

To develop simple programs for Cross Platform Mobile Application.

- 1.1. Familiarisation with ApacheCordova
- 1.2. Use of HTML5 form elements such as buttons, text filed, text area, check box, radio buttons, lists, scroll bar, list box, combo box etc
- 1.3. Concept of Event Handling, session etc
- 1.4. Develop simple programs using the above controls.

To explore the features of CSS3, javaScript, Ionic Framework, AngularJS

- 2.1 Develop menu driven programs - menus, menu bar, menu items etc
- 2.2 Implement Dialog boxes in programs

[Note: At the end this module, students shall design and develop the user interfaces, menus for their application]

Instructions:

A simple mobile application may be developed in any one of the domains such as Banking, Electricity Billing, Library management, Payroll, Insurance, Inventory, Health care etc. **Students must select the same topic that they used in their Application Development Lab II (Web) in the previous semester.** Application should developed by using an IDE.

Programming language HTML5, CSS3, javaScript must be used.

The course content given above is a general outline. The contents may be rearranged in tune with IDE/ Programming language for this lab without losing the course objective.

The lab record should contain all interim programs developed by the student during the development of the main application. The main application should be the last experiment.

Before the end of semester, the student should develop a complete Web based database application incorporating the features listed in the exercises above. In end semester examination the students will be evaluated based on the features listed above. Also the students have to demonstrate the database application software developed by them as part of the evaluation.
