

COURSE TITLE : BASIC INSTRUMENTATION LAB
COURSE CODE : 2219
COURSE CATEGORY : B
PERIODS/WEEK : 3
PERIODS/SEMESTER: 45
CREDITS : 2

On completion of this course the student will be able to

1. Study about different electronic measuring instruments used in the electronics laboratory
2. Understand different passive and active components used in the electronic circuits
3. Verify Ohm's law(Using low and medium resistances)
4. Verify Krichoff's Voltage law
5. Verify Thevenin's theorem
6. Verify Superposition theorem
7. Find out the cut in voltage of silicon diode
8. Find out the break down voltage of Zener diode
9. Construct a Half wave rectifier and calculate its ripple factor and efficiency and also observe its input and output wave forms
10. Construct a Full wave rectifier and calculate its ripple factor and efficiency and also observe its input and output wave forms
11. Construct a bridge rectifier and calculate its ripple factor and efficiency and also observe its input & output wave forms
12. Construct a Zener diode voltage regulator
13. Plot the Input / Output characteristics curve of transistor in CE configuration
14. Plot the Input / Output characteristics curve of transistor in CB configuration
15. Plot the FET characteristics.
16. Determine the relative error of electronic weighing balance.
17. Plot the linearity curve of a thermometer.
