

COURSE TITLE : **PRODUCTION MANAGEMENT**
COURSE CODE : **6303**
COURSE CATEGORY : **A**
PERIODS / WEEK : **5**
PERIODS / SEMESTER : **75**
CREDIT : **5**

TIME SCHEDULE

MODULE	TOPIC	PERIODS
1	Production Planning and Control	22
2	Types of Production Process	17
3	Production and Productivity	17
4	Product Design ,Development and Analysis	19
TOTAL		75

COURSE OUTCOME:

1. Understand the importance of Production Planning and Control
2. Understand the various type of Production Process
3. Learn the difference between Production and Productivity
4. Learn Product Design and its development

MODULE I

1.1.0 Understand the various functions of PPC

- 1.1.1 Learn Process planning procedure and practices
- 1.1.2 Learn Quality planning process and practices
- 1.1.3 Learn the Importance and Role of planning in Management Process
- 1.1.4 Understand the Benefits of planning.
- 1.1.5 Learn how to effectively apply planning in a production environment
- 1.1.6 Understand the term Economic Batch Quantity
- 1.1.7 Learn the process of scheduling production activities using Gantt Chart
- 1.1.8 Learn how to keep control over the Production Process
- 1.1.9 Learn to prepare sequence of operation and Root Sheet

MODULE II

2.1.0 Learn the different types of Production Process

- 2.1.1 Understand Mass Production and various techniques used
- 2.1.2 Define Job Order production and its application
- 2.1.3 Define Batch production and its application
- 2.1.4 Define Flexible Machining Process.
- 2.1.5 Prepare a simple Process flow chart

MODULE III

3.1.0 Learn the difference between Production and Productivity

- 3.1.1 Understand the concept and the various factors of Production
- 3.1.2 Understand the concept and the various factors of Productivity
- 3.1.3 Learn techniques used for increasing productivity
- 3.1.4 Learn techniques used in measurement of productivity

MODULE IV

4.1.0 Learn basics of Product Design

- 4.1.1 Describe the effect of design on Cost factor of Production
- 4.1.2 Describe the various factors effecting Product Design

- 4.1.3 Learn Product Design and its development
- 4.1.4 Describe the advantages of standardization in Production Process
- 4.1.5 Define the term Interchangeability and its advantages and disadvantages

4.2.1 Introduction to Analysis

- 4.2.2 Explain the Networking techniques like PERT-CPM-RAMS-PEP-GERT
- 4.2.3 Define the terms Event- Activity -Critical path - Duration - Slack- Float
- 4.2.4 Learn Networking diagrams used for Planning PERT and steps in PERT Planning
- 4.2.5 Learn Symbol networking diagram CPM related to Engineering Problems

CONTENT DETAILS

MODULE I

Understand the various functions of PPC ,Learn Process planning procedure and practices, Learn Quality planning process and practices, Learn the Importance and Role of planning in Management Process , Understand the Benefits of planning , Learn how to effectively apply planning in a production environment Understand the term Economic Batch Quantity, Learn the process of scheduling production activities using Gantt Chart, Learn how to keep control over the Production Process , Learn to prepare sequence of operation and Root Sheet

MODULE II

Learn the different types of Production Process, Understand Mass Production and various techniques used , Define Job Order production and its application , Define Batch production and its application , Define Flexible Machining Process. , Prepare a simple Process flow chart

MODULE III

Learn the difference between Production and Productivity, Understand the concept and the various factors of Production, Understand the concept and the various factors of Productivity, Learn techniques used for increasing productivity, Learn techniques used in measurement of productivity

MODULE IV

Learn basics of Product Design - Describe the effect of design on Cost factor of Production , Describe the various factors effecting Product Design , Learn Product Design and its development , Describe the advantages of standardization in Production Process , Define the term Interchangeability and its advantages and disadvantages , Introduction to Analysis , Explain the Networking techniques like PERT-CPM-RAMS-PEP-GERT , Define the terms Event- Activity -Critical path - Duration - Slack- Float , Learn Networking diagrams used for Planning PERT and steps in PERT Planning , Learn Symbol Networking diagram CPM related to Engineering Problems
