

FIRST SEMESTER DIPLOMA EXAMINATION IN MANAGEMENT

MANAGEMENT INFORMATION SYSTEM

MODEL QUESTION PAPER –SET-1

Time: 3 hours

Maximum Marks: 75

PART A**I. Answer all questions in one word or one sentence. Each question carries one mark.****(9 x 1 = 9 Marks)**

1	Define Management Information System.	M 1.01	R
2	State quality of information.	M 1.02	R
3	Explain Scheduled MIS report.	M2.02	U
4	Explain information management in MIS.	M2.01	U
5	Recall the term Intranet.	M3.02	U
6	State transaction processing system.	M3.01	U
7	Explain SDLC approach.	M4.01	R
8	Recall system development and implementation.	M4.03	U
9	Discuss the term Information overload.	M1.02	U

PART B**II. Answer any eight questions from the following. Each question carries 3 marks****(8 x 3 = 24 Marks)**

1	Explain the framework for understanding MIS.	M 1.03	R
2	Identify 3 different types of information.	M 1.02	R
3	Enumerate the need of MIS within a company	M 2.02	U
4	Explain 3 different types of MIS reports.	M 2.01	U
5	Discuss the terms Decision Support System and Executive Support System.	M 3.02	R
6	Discuss the terms Office Automation Systems and Knowledge Work System.	M3.01	R
7	Explain System Analysis and System Design.	M 4.02	U

8	Enumerate System Implementation and System Documentation.	M 4.03	R
9	List three characteristics of a system	M1.01	U
10	List any 3 features of information	M 1.03	U

PART C

Answer all questions. Each question carries seven marks

(6 x 7 = 42 Marks)

III	Classify the different types of systems. OR	M 1.01	R
IV	Explain the techniques for managing Information Overload.	M 1.02	R
V	List the needs for Information Management OR	M2.01	R
VI	Classify the different types of MIS	M2.02	U
VII	Explain Information systems and Classify the different types of Information systems. OR	M3.01	R
VIII	Explain Enterprise Resource Planning and various business functions that can be managed using ERP.	M3.03	R
IX	Discuss the System Development Methodologies. OR	M4.01	R
X	Explain the Future of Management Information Systems.	M4.04	R
XI	Explain the role of MIS within a company OR	M2.01	U
XII	Summarize the benefits of using MIS in an organization	M2.02	U
XIII	Describe the characteristics of a system. OR	M1.01	R
XIV	Summarize the Evolution of MIS.	M1.03	A

SCHEME OF VALUATION
(Scoring Indicators)- Set I
MANAGEMENT INFORMATION SYSTEM

Qn. No.		Split score	Total Score
	PART A		
1.	A Management Information System is an information system that evaluates, analyses, and processes an organization's data to produce meaningful and useful information based on which the management can take right decisions to ensure future growth of the organization.	1	1
2	Information quality is the value of information for a given use.	1	1
3	These are reports that are generated regularly with respect to time. They are in the nature of daily report, weekly report or monthly report	1	1
4	This information management system allows management to control the flow of information all around the organization	1	1
5	An intranet is a private computer network that uses internet protocols, network connectivity to access and share enterprise information and computing resources securely with its staff.	1	1
6	The work of a transaction process system is to collect and process data produced during an organization's routine activities.	1	1
7	The systems development life cycle (SDLC) is a conceptual model used in project management that describes the stages involved in an information system development project, from an initial feasibility study through maintenance of the completed application.	1	1
8	System development involves bringing a project from inception to completion and system implementation is an expensive investment that includes the hardware and software purchases, as well as the integration with existing systems and training of all employees.	1	1
9	Information overload is when a person or a machine takes in more details than they're able to process at any fgiven time.		
	Part B		
1	• Strategic Planning • Managerial Control • Operational Control	3X1	3
2	• Strategic Information • Tactical Information • Operational Information • Planning Information • Control Information • Knowledge Information • Database Information	3X1	3
3	• To control the creation and growth of records	3X1	3

	• To reduce operating costs • To improve efficiency and productivity • To assimilate new records management technologies • To ensure regulatory compliance • To minimize litigation risk.		
4	• Scheduled • Ad-hoc • Real-time	3X1	3
5	• A decision support system (DSS) is a computerized program used to support determinations, judgments, and courses of action in an organization or a business. • An Executive Support System (ESS) is software that allows users to transform enterprise data into quickly accessible and executive-level reports, such as those used by billing, accounting and staffing departments. An ESS enhances decision making for executives. ESS is also known as Executive Information System (EIS).	1.5X2	3
6	• An office automation system (OAS) is a collection of communication technology, computers, and persons to perform official tasks. It executes office transactions and supports official activities at every organizational level • A knowledge work system (KWS) is a specialized system built to promote the creation of knowledge and to make sure that knowledge and technical skills are proper integrated into the business.	1.5X2	3
7	• Systems analysis the process of observing systems for troubleshooting or development purposes. It is applied to information technology, where computer-based systems require defined analysis according to their makeup and design. • System design is the process of defining the elements of a system such as the architecture, modules and components, the different interfaces of those components and the data that goes through that system	1.5X2	3
8	Implementation is a process of ensuring that the information system is operational. It involves – ✓ Constructing a new system from scratch ✓ Constructing a new system from the existing one. Generally speaking, it is comprised of detailed language, illustrations and photos that help different people understand the software, and it is essential reference material. Many developers face challenges in creating software documentation that is both comprehensively helpful and easy to read.	1.5X2	3
9	• A system is a collection of interrelated entities and/or subsystems. • A system has a purpose-a system performs a function. It has a reason for its existence. The purpose in most cases is the	3X1	3

	output of the system and in a way the output defines the purpose of the system. • Systems have inputs and outputs. Outputs are produced by processing the inputs-a system (unless of theoretical interest and fully closed), interacts with the environment by taking in input and then after processing the input produces the output.		
10	• Most of the information is organisation specific and its value depends upon by its use by the decision maker. • It has a high rate of obsolescence and thus, it must reach the user as early as possible. Redundant part of this resource must be weeded out of the total stock of information. • Information is exposed to a variety of security risks. Therefore, it has to be protected by implementing appropriate security policies and procedures without hindering its seamless flow across its users.	3X1	3
	PART C		
QIII	• Process Control • Inventory control • Sales and Marketing • Human resource (Enterprise collaboration/Office automation) • Accounting and finance • Decision Support System • Management Reporting System	7X1	7
QIV	• Summarizing • Filtering • Inferences • Message routing	7	7
QV	• It Facilitates planning: helps in improving the quality of plans by providing relevant information for sound decision – making. • Minimizes information overload: Relevant and core information are supplied for decision making. • Encourages Decentralization: Decentralization of authority is possibly when there is a system for monitoring operations at lower levels. • It brings Co-ordination: information management facilities integration of specialized activities by keeping each department aware of the problem and requirements of other departments. • Makes control easier : Serves as a link between managerial planning and control. It improves the ability of management to evaluate and improve performance. • Information management includes assembling, processing , storing , Retrieval , evaluation and Dissemination of the information • Helps in taking timely and accurate decision without any	7X1	7

	delay.		
QVI	• Accounting management information systems • Financial management information systems • Manufacturing management information systems • Marketing management information system • Human resource management information system • Process Control • Management Reporting System • Inventory control	7X1	7
QVII	Information System is a system that handles the flow and maintenance of information, which supports the business operation. Types of Information systems: • Transaction Processing Systems (TPS) • Knowledge work systems (KWS) • Office automation systems (OAS) • Decision-support systems (DSS) • Management information systems (MIS) • Executive support systems (ESS)	7X1	7
QVIII	ERP: Enterprise Resources Planning (ERP) systems bind various functions of the business into a single database. Important functional areas that comes under are: • Production Management • Purchase Management • Inventory Management • Sales Management • Finance and Accounting Management. • Human Resource Management (HR)	7X1	7
QIX	• SDLC approach • Prototyping approach • User development approach	7	7
QX	Future of Management Information Systems • Use of AI to automate functions previously performed by humans. • Augmented analytics capabilities • AI driven development • Digital twins • Immersive user experience • Block chain technologies • Smart spaces, Digital work places • Digital ethics and privacy • Quantum Computing	7X1	7
QXI	Role of MIS in an organisation • To provide information readily to company decision makers	7X1	7

	• Management Information Systems also help in data collection • To promote collaboration in the workplace • To run possible scenarios in different business environments • Management Information systems give accurate projections of the company's standing in the short and long term. • Management Information Systems help track the implementation of particular decisions in a company. • To improve on the company's reporting		
QXII	Benefits of MIS: • Provides updated and timely information for decision-making • Facilitates monitoring of marketing operations • Raises efficiency of decision-making • Facilitates quick reference • Provides information on changing marketing environment • Promotes marketing excellence: • Facilitates tapping of marketing opportunities: • Provides market intelligence	7X1	7
QXIII	Characteristics of System: • A system is a collection of interrelated entities and/or subsystems. • A system has a purpose-a system performs a function. It has a reason for its existence. The purpose in most cases is the output of the system and in a way the output defines the purpose of the system. • Systems have inputs and outputs. Outputs are produced by processing the inputs-a system (unless of theoretical interest and fully closed), interacts with the environment by taking in input and then after processing the input produces the output. • Each system has a boundary. The system is inside the boundary and the environment is outside the boundary. • System serves a client-the system will have a utility and hence, a client for it. • The components that make up a system have functional as well as structural interrelationships with each other. • A system has an environment-a system cannot exist in isolation. It exists in an environment. The environment reacts with it. Each subsystem also has a purpose and a measure of purpose	7X1	7
QXIV	Evolution of MIS: • 1950 – 1960: Electronic Data Processing, Transaction Processing System • 1960 to 1970: Management Information Systems	7	7

	• 1970 to 1980: Decision Support Systems • 1980 to 1990: Executive Information Systems • 1990 to 2000: Knowledge Management Systems • 2000 – Present: E-Business		
--	---	--	--

FIRST SEMESTER DIPLOMA EXAMINATION IN MANAGEMENT

MANAGEMENT INFORMATION SYSTEM

MODEL QUESTION PAPER –SET-2

Time: 3 hours

Maximum Marks: 75

PART A**I. Answer all questions in one word or one sentence. Each question carries one mark.****(9 x 1 = 9 Marks)**

1	Define System.	M 1.01	R
2	Explain value of information.	M 1.02	R
3	Describe Real time MIS report.	M2.02	U
4	Recall the term MIS reports.	M2.01	R
5	Recall the term Extranet.	M3.02	R
6	State the meaning of Information system.	M3.01	R
7	Explain the term User development approach.	M4.01	U
8	Describe System Documentation.	M4.03	U
9	Explain the term Information.	M1.02	R

PART B**II. Answer any eight questions from the following. Each question carries 3 marks****(8 x 3 = 24 Marks)**

1	Classify the three types of systems.	M 1.03	R
2	Identify 3 different features of information.	M 1.02	R
3	Classify 3 categories of MIS	M 2.02	U
4	Explain the term information management.	M 2.01	U
5	Discuss the terms Decision Support System and Executive Support System.	M 3.02	U
6	Discuss the terms Office Automation and Enterprise Resource Planning Systems.	M 3.01	U
7	Explain SDLC approach and Prototyping approach.	M 4.02	U

8	List any 3 features of Management Information System.	M4.03	R
9	Explain the process of generation and communication of information	M1.01	U
10	Discuss any 3 types of MIS.	M 1.03	U

PART C

Answer all questions. Each question carries seven marks

(6 x 7 = 42 Marks)

III	Describe the characteristics of systems. OR	M1.01	U
IV	Define information and classify the different types of Information.	M1.02	R
V	Classify the different types of MIS reports. OR	M2.01	U
VI	List the benefits of using Management Information System.	M2.02	R
VII	Define the following terms. a. Information Systems. b. Transaction Processing Systems. c. Office Automation Systems d. Knowledge Work System. OR	M3.01	R
VIII	Explain the different types of Information system.	M3.03	U
IX	Generalize on the emerging technologies in MIS. OR	M4.01	U
X	Explain the following terms. a. Systems Analysis b. System Design b. System implementation d. system documentation	M4.04	U
XI	Explain the needs of information management. OR	M 2.01	U
XII	Explain the Role of MIS within the company	M2.02	U

XIII	Explain the attributes that define quality of information	M1.01	U
OR			
XIV	Explain Evolution of MIS	M1.03	A

SCHEME OF VALUATION
(Scoring Indicators)- Set II
MANAGEMENT INFORMATION SYSTEM

Qn. No.		Split score	Total Score
1	A system is a collection of elements or components that are organized for a common purpose.	1	1
2	Value of Information is a concept based on how much the information allows a decision-maker to improve his decision.	1	1
3	This type of MIS report allows someone to monitor changes as they occur.	1	1
4	MIS Reports are reports required by the management to assess the performance of the organization and allow for faster decision-making.	1	1
5	An extranet is a controlled private network allowing customers, partners, vendors, suppliers and other businesses to gain information, typically about a specific company or educational institution and do so without granting access to the organization's entire network.	1	1
6	" An information system is a set of interrelated components that works together to collect, process, store and breakdown the information to support decision making. "	1	1
7	Building the system by end-users with little or no formal technical assistance	1	1
8	System documentation is the process comprised of detailed language, illustrations and photos that help different people understand the software, and it is essential reference material.	1	1
9	Information can be defined as meaningfully interpreted data.	1	1
	PART B		
1	• Physical or Abstract System • Open Closed System • Deterministic and Probabilistic Systems • Formal and Informal Systems • Adaptive and Non-adaptive System • Simple and Complex System	1X3	3
2	• Most of the information is organisation specific and its value depends upon by its use by the decision maker. • It has a high rate of obsolescence and thus, it must reach the user as early as possible. Redundant part of this resource must be weeded out of the total stock of information. • Information is exposed to a variety of security risks. Therefore, it has to be protected by implementing appropriate security policies and procedures without hindering its seamless flow across its users.	1X3	3
3	• Accounting management information systems	1X3	3

	- Financial management information systems - Manufacturing management information systems - Marketing management information system - Human resource management information system - Process Control - Management Reporting System Inventory control		
4	Information management (IM) is the process by which relevant information is provided to decision-makers in a timely manner. The main components of information management are : People, policies and process, technology, data and information	3	3
5	- A decision support system (DSS) is a computerized program used to support determinations, judgments, and courses of action in an organization or a business. - An Executive Support System (ESS) is software that allows users to transform enterprise data into quickly accessible and executive-level reports, such as those used by billing, accounting and staffing departments. An ESS enhances decision making for executives. ESS is also known as Executive Information System (EIS).	1.5X2	3
6	- An office automation system (OAS) is a collection of communication technology, computers, and persons to perform official tasks. It executes office transactions and supports official activities at every organizational level - ERP refers to 'Enterprise Resource Planning' software which integrates various functions of a business into a single unified system.	1.5X2	3
7	- System Development Life Cycle (SDLC) is a conceptual model which includes policies and procedures for developing or altering systems throughout their life cycles - Prototyping is the process of creating an incomplete model of the future full-featured system, which can be used to let the users have a first idea of the completed program or allow the clients to evaluate the program.	1.5X2	3
8	- System approach - Management-oriented - Need-based - Exception-based - Future-oriented - Integrated - Common data flows	1X3	3
9	Information generation is the process of assimilating or gathering the required information from relevant area The information generated should be processed and communicated through proper channel in a timely manner to top management for proper decision making	1.5X2	3
10	Types of Information systems:	1X3	3

	• Transaction Processing Systems (TPS) • Knowledge work systems (KWS) • Office automation systems (OAS) • Decision-support systems (DSS) • Management information systems (MIS) Executive support systems (ESS)		
	PART C		
QIII	Characteristics of System: • A system is a collection of interrelated entities and/or subsystems. • A system has a purpose-a system performs a function. It has a reason for its existence. The purpose in most cases is the output of the system and in a way the output defines the purpose of the system. • Systems have inputs and outputs. Outputs are produced by processing the inputs-a system (unless of theoretical interest and fully closed), interacts with the environment by taking in input and then after processing the input produces the output. • Each system has a boundary. The system is inside the boundary and the environment is outside the boundary. • System serves a client-the system will have a utility and hence, a client for it. • The components that make up a system have functional as well as structural interrelationships with each other. • A system has an environment-a system cannot exist in isolation. It exists in an environment. The environment reacts with it. • Each subsystem also has a purpose and a measure of purpose	1X7	7
QIV	Information can be defined as meaningfully interpreted data Types of information: • Strategic Information • Tactical Information • Operational Information	1X7	7
QV	• Scheduled report • Ad-hoc report • Real-time report • Trend report • Exemption report • On demand report • Summary report	1X7	7
QVI	Benefits of MIS: • Provides updated and timely information for decision-making	1X7	7

	- Facilitates monitoring of marketing operations - Raises efficiency of decision-making - Facilitates quick reference - Provides information on changing marketing environment - Promotes marketing excellence: - Facilitates tapping of marketing opportunities:		
QVII	- Information: Information can be defined as meaningfully interpreted data - The work of a transaction process system is to collect and process data produced during an organization's routine activities. The activities are like orders, payments, deposits or reservation. - Office automation is the process of setting and watching data flow around by itself such that there's no human intervention, errors, and inaccuracies of any kind. - Knowledge Work System Knowledge Management systems are the set of processes developed in an organization to create, gather, store, maintain, and disseminate the firm's knowledge.	1.75X 4	7
QVIII	Types of Information systems: - Transaction Processing Systems (TPS) - Knowledge work systems (KWS) - Office automation systems (OAS) - Decision-support systems (DSS) - Management information systems (MIS) - Executive support systems (ESS)	1X7	7
QIX	- mobile devices - personal cloud - massive online - internet connectivity	7	7
QX	- Systems analysis the process of observing systems for troubleshooting or development purposes. It is applied to information technology, where computer-based systems require defined analysis according to their makeup and design. - System design is the process of defining the elements of a system such as the architecture, modules and components, the different interfaces of those components and the data that goes through that system - System Implementation is a process of ensuring that the information system is operational. It involves – - Constructing a new system from scratch - Constructing a new system from the existing one. ✓ Generally speaking, it is comprised of detailed language, illustrations and photos that help different people understand the software, and it is essential reference material. Many	1.75X 4	7

	developers face challenges in creating software documentation that is both comprehensively helpful and easy to read.		
QXI	✓ It Facilitates planning ✓ Helps in building strategies for top executives ✓ In Minimizes information overload ✓ MIS Encourages Decentralization ✓ It brings Co ordination ✓ It makes control easier ✓ Improves efficiency ✓ Gaining competitive advantage	1X7	7
QXII	Role of MIS in an organisation • To provide information readily to company decision makers • Management Information Systems also help in data collection • To promote collaboration in the workplace • To run possible scenarios in different business environments • Management Information systems give accurate projections of the company's standing in the short and long term. • Management Information Systems help track the implementation of particular decisions in a company. • To improve on the company's reporting	1X7	7
QXIII	• Timeliness • Appropriateness. • Reliability • Accuracy • Completeness • Unbiased . • Explicit • Reproducible • Sufficient • Unambiguous	1X7	7
QXIV	Evolution of MIS: • 1950 – 1960: Electronic Data Processing, Transaction Processing System • 1960 to 1970: Management Information Systems • 1970 to 1980: Decision Support Systems • 1980 to 1990: Executive Information Systems • 1990 to 2000: Knowledge Management Systems • 2000 – Present: E-Business
