

Model question
S4 Diploma Examination in Textile Technology
Textile Colouration & Finishing
Part A

I. Answer **all** questions in one word or one sentence.

1. Name two protein fibres.
2. List two dyes used for manmade fibres
3. What is P/C stands for.
4. Name two yarn package dyeing forms.
5. Localised dyeing is called -----.
6. Name one wetting agent used in printing paste preparation.
7. List the type of hydroextractors.
8. What is beetling in finishing.
9. Define BOD

PART B

I. Answer any **eight** questions from the following, Each question carries 3 marks.

1. List wool fibre preparatory process
2. Summarize Manmade fibre preparatory process
3. Describe what is happening while using carrier in polyester dyeing
4. Identify the correct method of preparation process for dyeing blends
5. Describe the process in one bath two phase method of dyeing PC
6. Summarize styles of printing
7. Discuss the preparation of printing paste
8. Describe Bathik printing
9. Define temporary finish
10. Restate the steps for pre-shrinkage

3*8=24marks

PART C

Answer **ALL** questions. Each question carries 7 marks.

- II. Apply cold dyeing method to dye wool with reactive dye
- OR**
- III. Use thermosol process to explain polyester dyeing
- IV. Use one bath two phase method to dye Polyester/cotton blend with disperse/vat dye
- OR**
- V. Construct a dye bath to dye P/W with Disperse/Acid dye

- VI. Use material moving principle to explain loose cotton dyeing.
- OR
- VII. Make use a padding mangle to explain continuous dyeing process
- VIII. Apply bathik resist style of printing for cotton
- OR
- IX. Use rotary printing machine to construct a four colour print in given fabric
- X. Apply learnt method to check the water repellent efficiency of given sample
- OR
- XI. Apply learnt method to check the fire retardant efficiency of given sample
- XII. Use Pre-Shrink principle to explain Sanforizing process
- OR
- XIII. Plan a secondary treatment process for a dyeing unit

Preparedby: Shajahan A
Lr.,CPTC

PART B

XIV. Answer any *eight* questions from the following, Each question carries 3 marks.

1. List wool fibre preparatory process
2. Summarize Manmade fibre preparatory process
3. Describe what is happening while using carrier in polyester dyeing
4. Identify the correct method of preparation process for dyeing blends
5. Describe the process in one bath two phase method of dyeing PC
6. Summarize styles of printing
7. Discuss the preparation of printing paste
8. Describe Batik printing
9. Define temporary finish
10. Restate the steps for pre-shrinkage

3*8=24marks

PART C

Answer ALL questions. Each question carries 7 marks.

- XV. Apply cold dyeing method to dye wool with reactive dye
OR
- XVI. Use thermosol process to explain polyester dyeing
- XVII. Use one bath two phase method to dye Polyester/cotton blend with disperse/vat dye
OR
- XVIII. Construct a dye bath to dye P/W with Disperse/Acid dye
- XIX. Use material moving principle to explain loose cotton dyeing.
OR
- XX. Make use a padding mangle to explain continuous dyeing process
- XXI. Apply batik resist style of printing for cotton
OR

- XXII. Use rotary printing machine to construct a four colour print in given fabric
- XXIII. Apply learnt method to check the water repellent efficiency of given sample
- OR
- XXIV. Apply learnt method to check the fire retardant efficiency of given sample
- XXV. Use Pre-Shrink principle to explain Sanforizing process
- OR
- XXVI. Plan a secondary treatment process for a dyeing unit
