

MODEL QUESTION PAPER
Textile Testing

PART A

I. Answer **all** questions in one word or one sentence.

1. The amount of moisture present in the atmosphere is -----
2. Most occurring value in a frequency distribution is -----
3. The length of yarn obtained by the use of wrap reel in yards.
4. Principle used in Stelometer to Estimate bundle fiber strength.
5. Formulae for expressing stress.
6. Directions of Twist insertion are -----
7. ----- Yarn fault of length 1 mm and a cross-section of 200%.
8. The instrument used for testing crimp.
9. ----- is the term used to describe the way a fabric hangs under its own weight.

1 x 9 = 9 Marks

PART B

II. Answer any **eight** questions from the following. Each question carries 3 marks.

1. Explain the measures of central Tendency
2. Define Young's modulus and Breaking point
3. Mention the importance of fiber strength
4. Write a short note on Advanced Fiber Information System.
5. Discuss 2.5% and 50% span length
6. Define S-twist and Z-twist
7. Give the definition for flexural rigidity with equation.
8. Define air permeability and water permeability.
9. Define Drape and drape co-efficient
10. Write a short note on cloth cover factor

3 X 8 = 24 Marks

Answer **ALL** questions. Each question carries 7 marks.

III. Explain random and biased sampling.

OR

IV. Describe the features of electronic moisture meter.

V. Explain the working of ATIRA fiber fineness tester with neat sketch.

OR

VI. List and explain the features of HVI.

VII. Describe the working of lea strength tester

OR

VIII. Explain working of tension type Twist Tester with neat sketch

IX. Describe the working of Shirley crimp tester

OR

X. Illustrate Shirley crease recovery tester with short details.

XI. Explain Measures of Dispersion – Range, standard deviation, CV%

OR

XII. Describe the working of sling hygrometer.

XIII. Explain the procedure for estimating the yarn count using Beesley's balance

OR

XIV. Discuss the Classification of basic classimat faults
