

Program: Diploma in Architecture	
Course Code: 5189	Course Title: Landscape Architecture
Semester: 5	Credits: 1.5
Course Category: Program Elective	
Periods per week: 3 (L:1, T:0, D:2)	Periods per semester: 45

Course Objectives:

- To make students aware of the role of different elements and components of landscape and to apply them in simple landscape designs

Course Prerequisites:

Topic	Course Code	Course Name	Semester
Principles of design		Fundamentals of architecture	2
Architectural design		Architectural Drawing -I, II	3, 4

Course Outcomes:

On completion of the course, the student will be able to:

COs	Description	Duration (Hours)	Cognitive Level
CO1	Familiarize elements and principles of landscape architecture and their application in outdoor space design	8	Understanding
CO2	Design of residential landscape incorporating various elements and principles of landscape design	11	Applying
CO3	Design of outdoor space for public incorporating various elements and principles of landscape design	11	Applying
CO4	Prepare drawings of landscape construction details	12	Applying
Series Test		3	

CO-PO Mapping:

Course Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1					3		
CO2	2				3		
CO3	2				3		
CO4	2				3		

3-Strongly mapped, 2-Moderately mapped, 1-Weakly mapped

Course Outline:

Module Outcomes	Description	Duration (Hours)	Cognitive Level
CO1	Familiarize elements and principles of landscape architecture and their application in outdoor space design		
M1.01	Discuss objectives, elements and principles of landscape architecture.	2	Understanding
M1.02	Discuss Botanical nomenclature and classification of plants with examples	3	Understanding
M1.03	Identify the hardscape elements in landscape design and their application in outdoor space design	3	Understanding
Contents: Landscape architecture – objectives – elements of landscape architecture – natural and artificial – principles of landscape design- Formal and Informal gardens- Plants- Botanical nomenclature : definition with example-Horticultural classification of plants with examples: ground covers, herbs, vines, shrubs and trees - Classification of trees with examples: shady, avenue, evergreen and deciduous - classification of plants according to growth cycle: perennial, biennial and annual- operational classification: Bedding, hanging and house plants - Lawn - methods of installation - maintenance of lawn-types of grass-water displays- pools, fountains, cascades- Hardscape elements- Paving - different types – flexible and rigid- vehicular paving and pedestrian paving- Curbs –types-Retaining walls :types - gravity retaining wall (concrete and timber), concrete cantilevered retaining wall, crib wall, green retaining wall, gabion wall -Fences – types of fences - garden furniture, pergola and gazebos-outdoor lighting – function-categories of outdoor light fixtures-effects			
CO2	Design of residential landscape incorporating various elements and principles of landscape design		

M2.01	Discuss on site analysis and prepare respective drawings of residential landscape	2	Applying
M2.02	Design residential garden.	3	Applying
M2.03	Prepare planting plan for the residential garden	4	Applying
M2.04	Prepare landscape design presentation drawings	2	Applying
	Series Test I	1	

Contents: Design of: residential outdoor spaces and interior courtyard

Site inventory and analysis process- soil: whether sandy, loam or clayey, topography: existing plants and contour, sun/shade conditions, built features, views and activity areas. Preparation of planting plan- development of conceptual/functional plan- Create a master list of possible plant materials for use in the planting plan-prepare preliminary planting plan which shows the proposed layout of the individual plant material –locate plant beds, structural plants, focal plants and massing plants- specify the plants- label and preparation of plant schedule

CO3	Design of outdoor space for public incorporating various elements and principles of landscape design		
M3.01	Discuss on site analysis and prepare respective drawings of terrace garden and a Tot lot	2	Applying
M3.02	Design terrace garden and the tot lot	3	Applying
M3.03	Prepare planting plan for terrace garden and the tot lot	4	Applying
M3.04	Prepare landscape design presentation drawings	2	Applying

Contents: Design of: Terrace garden and Tot lot

Site inventory- soil and topography, plants, sun/shade conditions, built features, views, and activity areas. Analysis of site conditions-preparation of planting plan- development of conceptual/functional plan- Create a master list of possible plant materials for use in the planting plan-prepare preliminary planting plan which shows the proposed layout of the individual plant material –locate plant beds, structural plants, focal plants and massing plants- specify the plants- label and preparation of plant schedule

CO4	Prepare drawings of landscape construction details		
M4.01	Draw cross sections of planting trees in pits, Planting in planter boxes, green roof /vegetated roof, planters in terrace garden	4	Applying

M4.02	Draw cross sections of typical: pavements, curbs, retaining walls and fence	3	Applying
M4.03	Draw details of garden furniture, gazebo and pergola	3	Applying
M4.04	Draw details of outdoor light fixtures	2	Applying
	Series Test II	2	
Contents: Paving – typical cross section - Curb – sections of brick curb, vertical stone curb, concrete curb and gutter with drain - Retaining walls – cross section of gravity concrete retaining wall – Fences– cross section of typical picket metal fencing on masonry wall, masonry wall - Illustrate garden furniture, Plan and sections of pergola and gazebos- Outdoor landscape lighting – categories of outdoor lighting- low level landscape light, Intermediate-Height Landscape Lights, Parking Lot and Roadway Light - Illustrate landscape lighting effects Grading –definition and objectives- use of landscape elements in environmental controls- Design of landscape- ○ Residence – front yard ○ Indoor garden and terrace garden of a residence
