

Program: Diploma in Fire Technology and Safety	
Course Code: 6462D	Course Title: Basic Safety in Material Handling
Semester: 6	Credits: 4
Course Category: Open Elective	
Periods per week: 4 (L:4 T:0 P:0)	Periods per semester: 60

Course Objectives:

- To understand the concepts, principles, and significance of material handling in ensuring workplace safety.
- To explore various types of material handling equipment and their correct usage.
- To examine the risks associated with manual material handling (MMH) and mechanical material handling (MMHE).
- To learn safety protocols and techniques to mitigate hazards associated with manual and mechanical material handling operations.

Course Outcomes

On completion of the course, the student will be able to:

CO n	Description	Duration (Hours)	Cognitive Level
CO1	Understand the principles and significance of material handling in safety management.	15	Understanding
CO2	Identify and classify various types of material handling equipment and their uses.	14	Applying
CO3	Analyze the risks associated with manual handling and suggest safety measures.	13	Analyzing
CO4	Understand safety considerations and control measures for mechanical material handling.	16	Applying
	Series Test	2	

CO–PO Mapping:

Course Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	2				
CO2	3	3	3				
CO3	3	3	2	3			
CO4	3	3	3	3			

3-Strongly mapped,2-Moderately mapped,1-Weakly mapped

Course Outline:

Module Outcomes	Description	Duration (Hours)	Cognitive Level
CO1	Understand the principles and significance of material handling in safety management.		
M1.01	Material Handling: Concepts and significance.	3	Understanding
M1.02	Principles of Material Handling: Objectives and efficiency.	3	Understanding
M1.03	Material Handling Equipments: Types and selection criteria..	3	Applying
M1.04	Systems Concept of Material Handling: Elements and advantages of correct handling.	3	Understanding
M1.05	Limitations and drawbacks in material handling and how to overcome them.	3	Analyzing
CO2	Identify and classify various types of material handling equipment and their uses.		
M2.01	Classification of Material Handling: Manual, semi-automatic, and automatic systems.	4	Understanding
M2.02	Risk Factors Associated with Manual Handling: Causes and prevention strategies.	4	Analyzing
M2.03	Methods to prevent back injury in manual material handling (MMH).	3	Applying

M2.04	Ways to reduce the risk associated with manual material handling.	3	Applying
	SeriesTestI	1	
Contents: Material Handling Systems: Classifying handling systems based on their operation type. Risk Factors: Examining the common risks associated with manual handling, including back injuries and musculoskeletal disorders. Preventive Measures: Effective methods to minimize risks during manual handling tasks.			
CO3	Analyze the risks associated with manual handling and suggest safety measures.		
M3.01	Safety Tips for Manual Material Handling: Proper lifting techniques, posture.	4	Applying
M3.02	Common Safety Considerations: Preventing slips, falls, and strains during manual handling.	5	Applying
M3.03	Ergonomics in Manual Material Handling: Designing workstations to reduce strain.	4	Analyzing
Contents: Safety Techniques: Proper lifting, carrying, and positioning methods to reduce the risk of injury. Ergonomics: How to design and modify workstations for better safety and comfort in manual handling. Preventive Practices: Tips for preventing common injuries, such as strains and back injuries.			
CO4	Understand safety considerations and control measures for mechanical material handling.		
M4.01	Mechanical Material Handling Equipment (MMHE): Types, uses, and classification.	4	Applying
M4.02	Safety Risks in Mechanical Material Handling: Identifying hazards and risks.	4	Analyzing
M4.03	Control Measures for MMHE Hazards: Risk assessment, safety standards.	4	Applying
M4.04	Safety Features in MMHE: Emergency stop systems, overload protection.	4	Understanding
	SeriesTest II	1	

Contents:

Mechanical Equipment: Types of mechanical material handling equipment and their applications in various industries.

Safety Hazards: Identifying and assessing risks associated with mechanical equipment, including electrical, mechanical, and ergonomic hazards.

Control Measures: Implementation of safety measures such as proper training, protective devices, and adherence to safety standards.
