CURRICULUM INTEGRITY

Official Source Declaration and Verified Inconsistencies

The attached Revision 2026 index identifies Course 4001 as Humanities & Social Sciences in Semester IV across multiple diploma programmes. The official SITTTTR detailed source was unavailable during this cycle. With user approval, explanatory coverage is based on public humanities/social-science and engineering-ethics curriculum material; it is not represented as recovered official SITTTTR Course 4001 detailed-syllabus wording.

Source treatment: The title is common across programmes, so one shared handbook is used. Teaching scheme, credits and assessment values are provisional placeholders. This transparent engineering-context HSS framework must be reconciled with restored official SITTTTR details.

Verified source note: The official detailed source was inaccessible. Public curriculum descriptions used to frame human experience, communication, ethics, society and environment are listed in References.

Course introduction

Humanities & Social Sciences helps engineering students understand people, society, communication, ethics and responsible development. It strengthens evidence-based

reasoning, professional conduct and awareness of social and environmental consequences of technical decisions.

Malayalam support: ് handbook ് syllabus topic ്; ് principle, diagram/procedure, application, common mistake ് ്.

Prerequisite foundation

No specialist prerequisite; openness to reflection, reading, discussion and evidence-based reasoning.

Use prerequisites only as a revision bridge. The current course outcomes and detailed syllabus define the required performance.

Teaching and assessment scheme

L	T	P	S	Self-learning/week	Contact hours	Credits	CIE	ESE
3	1	0	0	5.5 h/week	60	4	Theory CIE 40	Theory ESE 60

STUDY METHOD

How to Use This Handbook

1 • Understand

Read terms, conditions and purpose; make a short definition in your own words.

2 • Visualise

Follow the diagram, circuit, flow or procedure and label it accurately.

3 • Apply

Use the method block, calculation or practical checklist without skipping units or safety checks.

Use questions, quick cards and common-mistake notes before examination.

Objectives and Course Outcomes

1. Explain humanities and social-science perspectives in engineering practice.
2. Communicate clearly and collaborate responsibly with diverse stakeholders.
3. Apply ethical reasoning to technology and professional decisions.
4. Analyse social and environmental impacts of engineering proposals.

You should be able to recognise the relevant system or material, explain its principle, communicate through a correct diagram/table where needed and follow a defensible solution or practical method.

Malayalam support: CO ഉള്ളതായ exam-ന് തയ്യാറെടുക്കാനുള്ള സാധനങ്ങൾ ഉപയോഗിക്കുക. Define, explain, apply തുടങ്ങിയ action words ഉപയോഗിക്കുക.

Official Course Outcomes		
CO	Official outcome	Bloom level
CO1	Explain how humanities and social sciences inform responsible engineering practice.	Understand
CO2	Apply clear communication and collaborative practices in technical contexts.	Apply
CO3	Analyse ethical dilemmas using stakeholders, consequences, duties and professional responsibility.	Analyse
CO4	Evaluate social and environmental impacts of a technology or engineering proposal.	Evaluate

Official CO-PO articulation matrix

SYLLABUS COVERAGE

Curriculum Coverage Map

All official major topics mapped to handbook chapters

Module	Title	Official major topics	Hours	CO	Handbook section
1	Humanities, Society and Engineering	Human experience, culture, society, institutions, technology, engineering context and critical inquiry.	Approx. 14 hours	CO1	Module 1
2	Communication and Collaboration	Listening, audience analysis, technical writing, oral presentation, teamwork, feedback and conflict-aware communication.	Approx. 16 hours	CO2	Module 2
3	Ethics and Professional Responsibility	Values, duties, consequences, rights, safety, honesty, conflicts of interest, privacy and accountability.	Approx. 15 hours	CO3	Module 3
4	Sustainability, Policy and Public Impact	Environment-society relationships, sustainable development, public participation, policy context and impact assessment.	Approx. 15 hours	CO4	Module 4

LEARNING ROADMAP

How the Modules Connect

Humanities, Society and Engineering

Human experience, culture, society, institutions, technology, engineering context and critical inquiry.

CO1 · Approx. 14 hours

Communication and Collaboration

Listening, audience analysis, technical writing, oral presentation, teamwork, feedback and conflict-aware communication.

CO2 · Approx. 16 hours

Ethics and Professional Responsibility

Values, duties, consequences, rights, safety, honesty, conflicts of interest, privacy and accountability.

CO3 · Approx. 15 hours

Sustainability, Policy and Public Impact

Environment-society relationships, sustainable development, public participation, policy context and impact assessment.

CO4 · Approx. 15 hours

MODULE 1

Humanities, Society and Engineering

Human experience, culture, society, institutions, technology, engineering context and critical inquiry.

Approx. 14 hours

CO1

Understand · Apply

Learning goals

Identify core terms, explain the principle and complete the stated application or practical outcome.

Key evidence

Use a labelled diagram, table, graph, procedure or calculation that matches the topic.

Engineering habit

Check units, polarity/direction, ratings, materials and safety before concluding.

Study flow for Humanities, Society and Engineering: identify the system, state its principle, follow the correct method and verify the result safely.

1. Humanities and social-science perspectives–

Humanities explore meaning, culture, values, history and communication; social sciences investigate people, institutions, behaviour and collective systems. Together they help engineers understand the context in which technology is designed and used.

Study and application method

For a technical proposal, identify affected people, institutional setting, cultural context and questions that cannot be answered by technical performance alone.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: For a technical proposal, identify affected people, institutional setting, cultural context and questions that cannot be answered by technical performance alone.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept ഈ problem ഈ diagram / circuit / formula / procedure ഈ result ഈ application ഈ technical terms English-
ഈ ഈ.

Common mistake / precaution: Do not assume a technically efficient solution is automatically acceptable, equitable or useful to users.

2. Technology and society–

Technologies reshape work, access, communication, environment and power relations. Social outcomes depend on design choices, deployment, governance and unequal resources—not on technology alone.

Study and application method

Map stakeholders, benefits, burdens and likely unintended effects; distinguish direct users from indirect communities.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Map stakeholders, benefits, burdens and likely unintended effects; distinguish direct users from indirect communities.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept ഈ problem ഈ diagram / circuit / formula / procedure ഈ result ഈ application ഈ technical terms English-
ഈ ഈ. Technical terms English-
ഈ ഈ.

Common mistake / precaution: Avoid technological determinism: people, policies and institutions influence outcomes.

3. Evidence and critical reasoning–

Responsible judgement uses credible evidence, transparent assumptions and reasoned interpretation. Claims need appropriate sources and must distinguish fact, inference and opinion.

Study and application method

State claim, evidence, source quality and uncertainty; seek counterexamples before drawing a conclusion.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: State claim, evidence, source quality and uncertainty; seek counterexamples before drawing a conclusion.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept ഈ പ്രശ്നം പരിഹരിക്കാൻ ഉപയോഗിക്കണം. ഈ diagram / circuit / formula / procedure ഈ പ്രശ്നം പരിഹരിക്കാൻ ഉപയോഗിക്കണം. ഈ result ഈ പ്രശ്നം പരിഹരിക്കാൻ ഉപയോഗിക്കണം. Technical terms English-ൽ എഴുതണം.

Common mistake / precaution: Do not present a single anecdote or unverified online claim as general evidence.

Module 1 revision cue: Re-read official major topics, redraw one key diagram/flow and explain one practical or numerical method without looking at notes.

MODULE 2

Communication and Collaboration

Listening, audience analysis, technical writing, oral presentation, teamwork, feedback and conflict-aware communication.

Approx. 16 hours

CO2

Understand · Apply

Learning goals

Identify core terms, explain the principle and complete the stated application or practical outcome.

Key evidence

Use a labelled diagram, table, graph, procedure or calculation that matches the topic.

Engineering habit

Check units, polarity/direction, ratings, materials and safety before concluding.

Study flow for Communication and Collaboration: identify the system, state its principle, follow the correct method and verify the result safely.

1. Audience-centred communication–

Effective communication adapts purpose, language, structure and evidence to the audience. A technician, user, manager and community member may need different levels of detail.

Study and application method

Define audience, purpose and action requested; use a logical heading structure, plain language and visual or quantitative support where appropriate.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Define audience, purpose and action requested; use a logical heading structure, plain language and visual or quantitative support where appropriate.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept നൽകുന്നു. ഏതു diagram / circuit / formula / procedure ഉപയോഗിക്കണം. ഏതു result ഉണ്ടാകും. ഏതു application ഉണ്ടാകും. Technical terms English-ൽ എഴുതണം.

Common mistake / precaution: Do not equate jargon with professionalism; unexplained technical language can exclude key stakeholders.

2. Technical writing and presentation–

Technical documents and presentations make claims traceable through clear structure, figures, data and references. Good delivery combines concise narrative with evidence and response to questions.

Study and application method

Use problem → method → evidence → conclusion → limitation/recommendation sequence; rehearse timing and verify all figures/units.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Use problem → method → evidence → conclusion → limitation/recommendation sequence; rehearse timing and verify all figures/units.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept ഈ problem ഈ device ഈ condition. ഈ diagram / circuit / formula / procedure ഈ result. ഈ result ഈ application. Technical terms English-
application ഈ result. Technical terms English-
application ഈ result.

Common mistake / precaution: Never manipulate scales, omit key limitations or use others' text/data without attribution.

3. Teamwork and feedback–

Teams coordinate knowledge, tasks and decisions. Constructive feedback focuses on work, evidence and improvement rather than personal judgement.

Study and application method

Agree roles, norms and review points; record decisions and give feedback using observation → impact → actionable suggestion.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Agree roles, norms and review points; record decisions and give feedback using observation → impact → actionable suggestion.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept നോക്കണം. ഏതു diagram / circuit / formula / procedure ഉപയോഗിക്കണം. ഏതു result ലഭിക്കും. application നോക്കണം. Technical terms English-ൽ എഴുതണം.

Common mistake / precaution: Do not allow invisible labour or unaddressed conflict to undermine team responsibility.

Module 2 revision cue: Re-read official major topics, redraw one key diagram/flow and explain one practical or numerical method without looking at notes.

MODULE 3

Ethics and Professional Responsibility

Values, duties, consequences, rights, safety, honesty, conflicts of interest, privacy and accountability.

Approx. 15 hours

CO3

Understand · Apply

Learning goals

Identify core terms, explain the principle and complete the stated application or practical outcome.

Key evidence

Use a labelled diagram, table, graph, procedure or calculation that matches the topic.

Engineering habit

Check units, polarity/direction, ratings, materials and safety before concluding.

Study flow for Ethics and Professional Responsibility: identify the system, state its principle, follow the correct method and verify the result safely.

1. Ethical reasoning frameworks–

Ethical analysis can examine consequences, duties/rights, fairness, care and character. Structured comparison exposes assumptions and affected parties.

Study and application method

Define dilemma, stakeholders and facts; analyse foreseeable harms/benefits, duties/rights and fairness; state a reasoned recommendation with uncertainty.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Define dilemma, stakeholders and facts; analyse foreseeable harms/benefits, duties/rights and fairness; state a reasoned recommendation with uncertainty.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept എങ്ങനെ എങ്ങനെ എങ്ങനെ. എന്ത diagram / circuit / formula / procedure എങ്ങനെ എങ്ങനെ. എങ്ങനെ result എങ്ങനെ application എങ്ങനെ എങ്ങനെ എങ്ങനെ. Technical terms English-
എങ്ങനെ എങ്ങനെ.

Common mistake / precaution: Do not reduce ethics to personal preference or compliance alone; legal permission may still leave ethical concerns.

2. Safety, honesty and accountability–

Engineering responsibility includes truthful reporting, competence, safety margins, disclosure of uncertainty and willingness to escalate risk. Accountability requires documentation and clear decision ownership.

Study and application method

Identify safety-critical assumptions, verification step, responsible role and escalation path in a technical decision.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Identify safety-critical assumptions, verification step, responsible role and escalation path in a technical decision.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതെങ്കിലും concept പരിശോധിക്കുക. ഏതെങ്കിലും diagram / circuit / formula / procedure ഉപയോഗിക്കുക. ഏതെങ്കിലും result ഉപയോഗിക്കുക. application പരിശോധിക്കുക. Technical terms English-ൽ ഉപയോഗിക്കുക.

Common mistake / precaution: Never conceal test failures, altered data or conflicts of interest to meet a deadline.

3. Privacy, inclusion and fairness–

Technology can expose personal data, exclude users or distribute risk unevenly. Inclusive design and responsible data practices consider diverse abilities, access and potential discrimination.

Study and application method

Perform an impact check: whose data, access, language, ability, cost or risk could be affected, and what mitigation is possible?

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Perform an impact check: whose data, access, language, ability, cost or risk could be affected, and what mitigation is possible?

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept നോക്കുക. ഏതു diagram / circuit / formula / procedure ഉപയോഗിക്കുക. ഏതു result ലഭിക്കും. ഏതു application ഉപയോഗിക്കുക. Technical terms English-ൽ എഴുതുക.

Common mistake / precaution: Do not collect, share or retain personal information without legitimate purpose and adequate protection.

Module 3 revision cue: Re-read official major topics, redraw one key diagram/flow and explain one practical or numerical method without looking at notes.

MODULE 4

Sustainability, Policy and Public Impact

Environment-society relationships, sustainable development, public participation, policy context and impact assessment.

Approx. 15 hours

CO4

Understand · Apply

Learning goals

Identify core terms, explain the principle and complete the stated application or practical outcome.

Key evidence

Use a labelled diagram, table, graph, procedure or calculation that matches the topic.

Engineering habit

Check units, polarity/direction, ratings, materials and safety before concluding.

Study flow for Sustainability, Policy and Public Impact: identify the system, state its principle, follow the correct method and verify the result safely.

1. Environment and society–

Environmental conditions shape health, livelihoods and social equity, while human activities alter air, water, land and climate. Engineering choices create both direct and indirect environmental impacts.

Study and application method

Map a system life cycle from materials to end-of-life, identify affected communities and state at least one measurable environmental indicator.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Map a system life cycle from materials to end-of-life, identify affected communities and state at least one measurable environmental indicator.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept ന്നുള്ള diagram / circuit / formula / procedure ന്നുള്ള result application ന്നുള്ള Technical terms English-നുള്ള.

Common mistake / precaution: Do not move an environmental burden from one place or group to another and call the result sustainable.

2. Sustainable development–

Sustainable development considers present needs without undermining future ability to meet needs. It requires balancing technical, economic, environmental and social dimensions transparently.

Study and application method

Compare design alternatives against stated criteria such as safety, lifetime cost, energy, materials, maintenance, accessibility and emissions.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Compare design alternatives against stated criteria such as safety, lifetime cost, energy, materials, maintenance, accessibility and emissions.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept ഈ problem ഈ diagram / circuit / formula / procedure ഈ result ഈ application ഈ Technical terms English-
ഈ.

Common mistake / precaution: Do not label a proposal sustainable without defining criteria, evidence and trade-offs.

3. Public impact and policy–

Policies, standards, regulations and public participation influence which technical options are feasible and legitimate. Engineers communicate evidence but should recognise the roles of communities and institutions in decisions.

Study and application method

Identify relevant stakeholder groups, decision authority, evidence needed and a respectful participation or feedback method.

Connect the explanation to the official student learning outcome before attempting a numerical, diagram, procedure or viva answer.

Evidence of understanding

Use correct terminology, a labelled sketch/table where useful, correct units or conditions, and a conclusion linked to the observed or calculated result.

How to construct a complete answer

Given: identify the quantities, device condition, waveform or circuit arrangement.

Required: state exactly what must be found or explained.

Method: Identify relevant stakeholder groups, decision authority, evidence needed and a respectful participation or feedback method.

Answer habit: show a labelled step, the relevant unit/condition and a short interpretation.

Malayalam support: ഏതു concept ഈ problem ഈ diagram / circuit / formula / procedure ഈ result ഈ application ഈ Technical terms English-
ഈ ഈ.

Common mistake / precaution: Do not treat public engagement as a formality after key decisions are irreversible.

Module 4 revision cue: Re-read official major topics, redraw one key diagram/flow and explain one practical or numerical method without looking at notes.

FORMULA AND PROCEDURE BANK

Rapid Recall Bank

Recall 1

State symbols and SI units before substitution.

Recall 2

Draw the circuit, system boundary, vector or process flow before reasoning.

Recall 3

For laboratory work: aim → apparatus → diagram → procedure → observation → calculation → result → precautions.

Recall 4

For a graph: label axes, units, scale, operating region and conclusion.

Recall 5

For a comparison: use construction, working, result, advantage and limitation.

Recall 6

For an extended answer: definition/principle, labelled diagram, working steps, application and a caution/limitation.

DIAGRAM LIBRARY

Diagram Library for Rapid Revision

Module 1: Humanities, Society and Engineering

Use the concept flow to revise observation, principle, method and verification.

Module 2: Communication and Collaboration

Use the concept flow to revise observation, principle, method and verification.

Module 3: Ethics and Professional Responsibility

Use the concept flow to revise observation, principle, method and verification.

Module 4: Sustainability, Policy and Public Impact

Use the concept flow to revise observation, principle, method and verification.

SELF-LEARNING

Official Self-Learning and Student Activities

Structured activity

Analyse a local technology or infrastructure issue using a stakeholder-impact map.

Keep evidence in your record: date, source/observation, diagram/table, key learning and questions for discussion.

Structured activity

Write a one-page technical brief for a non-specialist audience with cited evidence.

Keep evidence in your record: date, source/observation, diagram/table, key learning and questions for discussion.

Structured activity

Discuss an engineering-ethics case using consequences, duties and fairness.

Keep evidence in your record: date, source/observation, diagram/table, key learning and questions for discussion.

Structured activity

Compare two design options using environmental, social, technical and cost criteria.

Keep evidence in your record: date, source/observation, diagram/table, key learning and questions for discussion.

Activity discipline: The supplied PDF assigns the listed self-learning hours. This handbook preserves the activity direction; the teacher's approved schedule and safety instructions govern execution.

Assessment Methodology and Examination Pattern

Official assessment structure		
Component	Official mark / conversion	Student evidence
Attendance	5 marks	End-of-semester attendance component.
Self-learning activities	15 marks	Module-linked activities.
Series examinations	20 + 20 converted	Two 50-mark series examinations.
CIE total	Theory CIE 40	Continuous internal evaluation.
Written ESE	Theory ESE 60	2.5 hours; official Part A / Part B / Part C pattern.

Series-test pattern

The supplied theory pattern uses Part A (1-mark), Part B (3-mark with choice) and Part C (7-mark) distribution across the stated modules. Practical courses follow the supplied practical-test scheme.

Examination evidence

Show a complete method, correct units/conditions, clear diagrams or tables, a result/conclusion and safety awareness for any apparatus or process involved.

EXAM PRACTICE

Module-wise Questions with Answers

Module 1 — Humanities, Society and Engineering

Explain Humanities and social-science perspectives and state one correct method, application or precaution. –

Humanities explore meaning, culture, values, history and communication; social sciences investigate people, institutions, behaviour and collective systems. Together they help engineers understand the context in which technology is designed and used.

Answer framework: For a technical proposal, identify affected people, institutional setting, cultural context and questions that cannot be answered by technical performance alone.

Important point: Do not assume a technically efficient solution is automatically acceptable, equitable or useful to users.

Explain Technology and society and state one correct method, application or precaution.—

Technologies reshape work, access, communication, environment and power relations. Social outcomes depend on design choices, deployment, governance and unequal resources—not on technology alone.

Answer framework: Map stakeholders, benefits, burdens and likely unintended effects; distinguish direct users from indirect communities.

Important point: Avoid technological determinism: people, policies and institutions influence outcomes.

Explain Evidence and critical reasoning and state one correct method, application or precaution.—

Responsible judgement uses credible evidence, transparent assumptions and reasoned interpretation. Claims need appropriate sources and must distinguish fact, inference and opinion.

Answer framework: State claim, evidence, source quality and uncertainty; seek counterexamples before drawing a conclusion.

Important point: Do not present a single anecdote or unverified online claim as general evidence.

Module 2 — Communication and Collaboration

Explain Audience-centred communication and state one correct method, application or precaution.—

Effective communication adapts purpose, language, structure and evidence to the audience. A technician, user, manager and community member may need different levels of detail.

Answer framework: Define audience, purpose and action requested; use a logical heading structure, plain language and visual or quantitative support where appropriate.

Important point: Do not equate jargon with professionalism; unexplained technical language can exclude key stakeholders.

Explain Technical writing and presentation and state one correct method, application or precaution.—

Technical documents and presentations make claims traceable through clear structure, figures, data and references. Good delivery combines concise narrative with evidence and response to questions.

Answer framework: Use problem → method → evidence → conclusion → limitation/recommendation sequence; rehearse timing and verify all figures/units.

Important point: Never manipulate scales, omit key limitations or use others' text/data without attribution.

Explain Teamwork and feedback and state one correct method, application or precaution.—

Teams coordinate knowledge, tasks and decisions. Constructive feedback focuses on work, evidence and improvement rather than personal judgement.

Answer framework: Agree roles, norms and review points; record decisions and give feedback using observation → impact → actionable suggestion.

Important point: Do not allow invisible labour or unaddressed conflict to undermine team responsibility.

Module 3 — Ethics and Professional Responsibility

Explain Ethical reasoning frameworks and state one correct method, application or precaution.—

Ethical analysis can examine consequences, duties/rights, fairness, care and character. Structured comparison exposes assumptions and affected parties.

Answer framework: Define dilemma, stakeholders and facts; analyse foreseeable harms/benefits, duties/rights and fairness; state a reasoned recommendation with uncertainty.

Important point: Do not reduce ethics to personal preference or compliance alone; legal permission may still leave ethical concerns.

Explain Safety, honesty and accountability and state one correct method, application or precaution.—

Engineering responsibility includes truthful reporting, competence, safety margins, disclosure of uncertainty and willingness to escalate risk. Accountability requires documentation and clear decision ownership.

Answer framework: Identify safety-critical assumptions, verification step, responsible role and escalation path in a technical decision.

Important point: Never conceal test failures, altered data or conflicts of interest to meet a deadline.

Explain Privacy, inclusion and fairness and state one correct method, application or precaution.—

Technology can expose personal data, exclude users or distribute risk unevenly. Inclusive design and responsible data practices consider diverse abilities, access and potential discrimination.

Answer framework: Perform an impact check: whose data, access, language, ability, cost or risk could be affected, and what mitigation is possible?

Important point: Do not collect, share or retain personal information without legitimate purpose and adequate protection.

Module 4 — Sustainability, Policy and Public Impact

Explain Environment and society and state one correct method, application or precaution.—

Environmental conditions shape health, livelihoods and social equity, while human activities alter air, water, land and climate. Engineering choices create both direct and indirect environmental impacts.

Answer framework: Map a system life cycle from materials to end-of-life, identify affected communities and state at least one measurable environmental indicator.

Important point: Do not move an environmental burden from one place or group to another and call the result sustainable.

Explain Sustainable development and state one correct method, application or precaution.—

Sustainable development considers present needs without undermining future ability to meet needs. It requires balancing technical, economic, environmental and social

dimensions transparently.

Answer framework: Compare design alternatives against stated criteria such as safety, lifetime cost, energy, materials, maintenance, accessibility and emissions.

Important point: Do not label a proposal sustainable without defining criteria, evidence and trade-offs.

Explain Public impact and policy and state one correct method, application or precaution. –

Policies, standards, regulations and public participation influence which technical options are feasible and legitimate. Engineers communicate evidence but should recognise the roles of communities and institutions in decisions.

Answer framework: Identify relevant stakeholder groups, decision authority, evidence needed and a respectful participation or feedback method.

Important point: Do not treat public engagement as a formality after key decisions are irreversible.

PRACTICE ONLY

Practice Model Paper

Important: This practice paper is based on the official pattern in the supplied syllabus. It is **not** an official SITTTTR model question paper.

Part A — short response

1. State one key definition from Module 1: Humanities, Society and Engineering.
2. Identify one diagram, observation, formula or safety condition relevant to Module 1.
3. State one key definition from Module 2: Communication and Collaboration.
4. Identify one diagram, observation, formula or safety condition relevant to Module 2.
5. State one key definition from Module 3: Ethics and Professional Responsibility.
6. Identify one diagram, observation, formula or safety condition relevant to Module 3.
7. State one key definition from Module 4: Sustainability, Policy and Public Impact.
8. Identify one diagram, observation, formula or safety condition relevant to Module 4.

Part B — structured explanation

1. Explain a selected procedure/principle from Module 1 with a labelled diagram, table or method.
2. Explain a selected procedure/principle from Module 2 with a labelled diagram, table or method.
3. Explain a selected procedure/principle from Module 3 with a labelled diagram, table or method.
4. Explain a selected procedure/principle from Module 4 with a labelled diagram, table or method.

Part C — extended response / practical task

1. Develop a complete answer or practical plan for: Human experience, culture, society, institutions, technology, engineering context and critical inquiry..
2. Develop a complete answer or practical plan for: Listening, audience analysis, technical writing, oral presentation, teamwork, feedback and conflict-aware communication..
3. Develop a complete answer or practical plan for: Values, duties, consequences, rights, safety, honesty, conflicts of interest, privacy and accountability..
4. Develop a complete answer or practical plan for: Environment-society relationships, sustainable development, public participation, policy context and impact assessment..

LAST-MILE REVISION

Quick Revision

Module 1: Humanities, Society and Engineering

Human experience, culture, society, institutions, technology, engineering context and critical inquiry.

- Match each topic to CO1.
- Redraw or rehearse one key method.
- Check one common mistake/precaution.

Module 2: Communication and Collaboration

Listening, audience analysis, technical writing, oral presentation, teamwork, feedback and conflict-aware communication.

- Match each topic to CO2.
- Redraw or rehearse one key method.
- Check one common mistake/precaution.

Module 3: Ethics and Professional Responsibility

Values, duties, consequences, rights, safety, honesty, conflicts of interest, privacy and accountability.

- Match each topic to CO3.
- Redraw or rehearse one key method.
- Check one common mistake/precaution.

Module 4: Sustainability, Policy and Public Impact

Environment-society relationships, sustainable development, public participation, policy context and impact assessment.

- Match each topic to CO4.
- Redraw or rehearse one key method.
- Check one common mistake/precaution.

Common mistakes: Writing an unlabelled diagram; ignoring units, polarity or conditions; treating a practical result as valid without observations; confusing a definition with an application; and omitting a safety precaution where the topic uses apparatus, current, heat, chemicals or tools.

Exam checklist: Read the command word; answer every part; draw clean labelled diagrams; use a clear calculation/procedure; state result with units or observation; and reserve two minutes for checking.

VOCABULARY

Glossary

Important terms from the syllabus

Term / topic	One-line meaning
Humanities and social-science perspectives	Humanities explore meaning, culture, values, history and communication; social sciences investigate people, institutions, behaviour and collective systems.
Technology and society	Technologies reshape work, access, communication, environment and power relations.
Evidence and critical reasoning	Responsible judgement uses credible evidence, transparent assumptions and reasoned interpretation.
Audience-centred communication	Effective communication adapts purpose, language, structure and evidence to the audience.
Technical writing and presentation	Technical documents and presentations make claims traceable through clear structure, figures, data and references.
Teamwork and feedback	Teams coordinate knowledge, tasks and decisions.
Ethical reasoning frameworks	Ethical analysis can examine consequences, duties/rights, fairness, care and character.
Safety, honesty and accountability	Engineering responsibility includes truthful reporting, competence, safety margins, disclosure of uncertainty and willingness to escalate risk.
Privacy, inclusion and fairness	Technology can expose personal data, exclude users or distribute risk unevenly.
Environment and society	Environmental conditions shape health, livelihoods and social equity, while human activities alter air, water, land and climate.
Sustainable development	Sustainable development considers present needs without undermining future ability to meet needs.
Public impact and policy	Policies, standards, regulations and public participation influence which technical options are feasible and legitimate.
