

Course 3072

3 Credits: 3

Program Core

Source-grounded

# Mechanical Operations

□ To impart thorough knowledge in mechanical operations used in chemical plants.

## OFFICIAL SOURCE DECLARATION

### How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 3072 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

**Source file:** 3072.pdf from the uploaded official SITTTTR syllabus archive. **Course code and title:** preserved from the source.

## COURSE DASHBOARD

### Official course information

#### Course information

| Item             | Official information                        |
|------------------|---------------------------------------------|
| Programme        | Diploma in Chemical Engineering             |
| Course code      | 3072                                        |
| Course title     | Mechanical Operations                       |
| Semester         | 3 Credits: 3                                |

## Modules

4 official module sections detected.

## Topic entries

16 source-aligned topic entries retained.

## Study mode

Theory and application emphasis.

### STUDY METHOD

## How to use this lesson

### First pass

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

### Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

### Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

## Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

### LEARNING OUTCOMES

## Objectives, outcomes and mapping

### Course objectives

- To impart thorough knowledge in mechanical operations used in chemical plants.
- To impart operational skills for chemical plant operations.

#### Course outcomes

| CO  | Official outcome                                                                                          | Study level           |
|-----|-----------------------------------------------------------------------------------------------------------|-----------------------|
| CO1 | Summarise size reduction and size separation. 9 Understanding                                             | See official syllabus |
| CO2 | Interpret solid - liquid separation equipments. 14 Applying Summarise the industrial operations agitation | See official syllabus |
| CO3 | 14 Understanding and mixing. Summarise the handling of solids in chemical                                 | See official syllabus |
| CO4 | 8 Understanding process industries.                                                                       | See official syllabus |

#### CO-PO mapping evidence

| Row | Extracted official mapping |
|-----|----------------------------|
| CO1 | CO1 2                      |
| CO2 | CO2 3                      |
| CO3 | CO3 3                      |
| CO4 | CO4 2                      |

## Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

### Module coverage

| Module   | Official heading                                                 | Topic entries | Hours        |
|----------|------------------------------------------------------------------|---------------|--------------|
| Module 1 | Summarise size reduction and size separation.                    | 5             | As specified |
| Module 2 | Interpret solid - liquid separation equipments.                  | 4             | As specified |
| Module 3 | Summarise the industrial operations agitation and mixing.        | 4             | As specified |
| Module 4 | Summarise the handling of solids in chemical process industries. | 3             | As specified |

### MODULE 1

## Summarise size reduction and size separation.

This module is presented from the official syllabus scope for Mechanical Operations. Use the topic cards for learning and the source transcript for exact coverage.

**As specified**  
official hours

**CO-linked**  
see outcomes

### Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

### Key facts

- Official module title: Summarise size reduction and size separation.
- Official duration: As specified
- Official topic entries captured: 5

- The full source excerpt is preserved below for coverage checking.

## Comprehend the properties of particles. 2 Understanding.

Comprehend the properties of particles. 2 Understanding. is an official topic in Module 1 of Mechanical Operations. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

### Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

### Study points

- Define or identify Comprehend the properties of particles. 2 Understanding. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

### Engineering or professional relevance

In Polytechnic practice, comprehend the properties of particles. 2 understanding. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

#### Topic study guide

| Aspect              | What to prepare                                                                                    |
|---------------------|----------------------------------------------------------------------------------------------------|
| Definition/identity | What Comprehend the properties of particles. 2 Understanding. means in the official course context |
| Study lens          | Principle → components or stages → result → application                                            |
| Exam evidence       | Definition, labelled explanation, comparison, procedure or example as appropriate                  |

**Exam tip:** Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related

but different term.

**Malayalam support:** Module 1- Comprehend the properties of particles. 2 Understanding. definition/meaning . steps, application . Technical terms English- .

## Summarise size reduction. 1 Understanding.

Summarise size reduction. 1 Understanding. is an official topic in Module 1 of Mechanical Operations. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

### Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

### Study points

- Define or identify Summarise size reduction. 1 Understanding. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

### Engineering or professional relevance

In Polytechnic practice, summarise size reduction. 1 understanding. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

#### Topic study guide

| Aspect              | What to prepare                                                                      |
|---------------------|--------------------------------------------------------------------------------------|
| Definition/identity | What Summarise size reduction. 1 Understanding. means in the official course context |
| Study lens          | Principle → components or stages → result → application                              |
| Exam evidence       | Definition, labelled explanation, comparison, procedure or example as appropriate    |

**Exam tip:** Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

**Malayalam support:** Module 1-  
Summarise size reduction. 1 Understanding.  
definition/meaning .  
steps, application . Technical terms English-  
.

## Illustrate size reduction equipment. 3 Understanding.

Illustrate size reduction equipment. 3 Understanding. is an official topic in Module 1 of Mechanical Operations. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

### Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

### Study points

- Define or identify Illustrate size reduction equipment. 3 Understanding. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

### Engineering or professional relevance

In Polytechnic practice, illustrate size reduction equipment. 3 understanding. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

**Exam tip:** Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related

but different term.

**Malayalam support:** Module 1-ഓരോന്നും Comprehend the theories behind crushing. 1 Understanding. ഓരോന്നും definition/meaning ഓരോന്നും. ഓരോന്നും ഓരോന്നും, steps, application ഓരോന്നും ഓരോന്നും. Technical terms English-ഓരോന്നും ഓരോന്നും.

**Summarise the methods of size separation. 2 Understanding. Define: Particle shape, particle size, specific surface area of the mixture, average particle size, and shape factor. Size reduction: List the nature of materials to be crushed - List the classification of crushing and grinding equipment. Differentiate closed circuit grinding and open circuit grinding. Illustrate the working of: Blake Jaw crusher - Gyratory crusher -Single Roll crusher and Smooth roll crusher - ball mill and tube mill Explain the theory behind the action of crushing rolls - Define the angle of Nip of crushing rolls. Laws of crushing- State Rittinger's law, Kick's law and Bond's law. Size separation- Compare the Tyler and U.S standard screens. List the types of screening equipment. Illustrate the working of grizzlies, trommel, vibrating screens and magnetic separator. Differentiate shaking and vibrating screen - Ideal and actual screen - Effectiveness of screen**

| Study lens          | Principle → components or stages → result → application                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Exam evidence       | Definition, labelled explanation, comparison, procedure or example as appropriate                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

**Exam tip:** Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

**Malayalam support:** Module 1- Summarise the methods of size separation. 2 Understanding. Define: Particle shape, particle size, specific surface area of the mixture, average particle size, and shape factor. Size reduction: List the nature of materials to be crushed - List the classification of crushing and grinding equipment. Differentiate closed circuit grinding and open circuit grinding. Illustrate the working of: Blake Jaw crusher - Gyratory crusher -Single Roll crusher and Smooth roll crusher - ball mill and tube mill Explain the theory behind the action of crushing rolls - Define the angle of Nip of crushing rolls. Laws of crushing- State Rittinger's law, Kick's law and Bond's law. Size separation- Compare the Tyler and U.S standard screens. List the types of screening equipment. Illustrate the working of grizzlies, trommel, vibrating screens and magnetic separator. Differentiate shaking and vibrating screen - Ideal and actual screen - Effectiveness of screen

ॐॐॐॐॐॐॐॐॐॐ definition/meaning ॐॐॐॐॐॐॐॐॐॐ. ॐॐॐॐॐ ॐॐॐॐॐ ॐॐॐॐॐॐॐ, steps, application ॐॐॐॐॐ ॐॐॐॐॐॐॐॐॐॐॐॐ. Technical terms English-ॐ ॐॐॐॐॐ ॐॐॐॐॐॐॐॐॐॐॐॐ.

## Official syllabus detail and terminology

The following excerpt preserves official syllabus terminology for this module.  
Educational explanations below are separate elaboration.

Summarise size reduction and size separation.

M1.01      Comprehend the properties of particles.      2  
Understanding.

M1.02      Summarise size reduction.      1  
Understanding.

M1.03      Illustrate size reduction equipment.      3  
Understanding.

M1.04      Comprehend the theories behind crushing.      1  
Understanding.

M1.05      Summarise the methods of size separation.      2  
Understanding.

Contents:

Define: Particle shape, particle size, specific surface area of the mixture, average particle size, and shape factor.

Size reduction: List the nature of materials to be crushed - List the classification of crushing and grinding equipment. Differentiate closed circuit grinding and open circuit grinding.

Illustrate the working of: Blake Jaw crusher - Gyratory crusher -Single Roll crusher and

Smooth roll crusher - ball mill and tube mill

Explain the theory behind the action of crushing rolls - Define the angle of Nip of

crushing rolls. Laws of crushing- State Rittinger's law, Kick's law and Bond's

**Module study routine:** Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

## MODULE 2

# Interpret solid - liquid separation equipments.

This module is presented from the official syllabus scope for Mechanical Operations.  
Use the topic cards for learning and the source transcript for exact coverage.

**As specified**  
official hours

**CO-linked**  
see outcomes

## Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

## Key facts

- Official module title: Interpret solid - liquid separation equipments.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

## Comprehend the principles of settling.

Comprehend the principles of settling. is an official topic in Module 2 of Mechanical Operations. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

### Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

### Study points

- Define or identify Comprehend the principles of settling. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

### Engineering or professional relevance

In Polytechnic practice, comprehend the principles of settling. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

#### Topic study guide

| Aspect              | What to prepare                                                                   |
|---------------------|-----------------------------------------------------------------------------------|
| Definition/identity | What Comprehend the principles of settling. means in the official course context  |
| Study lens          | Principle → components or stages → result → application                           |
| Exam evidence       | Definition, labelled explanation, comparison, procedure or example as appropriate |

**Exam tip:** Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

**Malayalam support:** Module 2-ഓരോ മോഡ്യൂളിനും താഴെ പറയുന്നവയെക്കുറിച്ച് മനസ്സിലാക്കുക.

ഓരോ മോഡ്യൂളിനും താഴെ പറയുന്നവയെക്കുറിച്ച് മനസ്സിലാക്കുക. definition/meaning, steps, application, technical terms English-ഓരോ മോഡ്യൂളിനും താഴെ പറയുന്നവയെക്കുറിച്ച് മനസ്സിലാക്കുക.

## Interpret sedimentation processes.

Interpret sedimentation processes. is an official topic in Module 2 of Mechanical Operations. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

### Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

### Study points

- Define or identify Interpret sedimentation processes. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

### Engineering or professional relevance

In Polytechnic practice, interpret sedimentation processes. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

#### Topic study guide

| Aspect              | What to prepare                                                                   |
|---------------------|-----------------------------------------------------------------------------------|
| Definition/identity | What Interpret sedimentation processes. means in the official course context      |
| Study lens          | Principle → components or stages → result → application                           |
| Exam evidence       | Definition, labelled explanation, comparison, procedure or example as appropriate |

**Exam tip:** Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

**Malayalam support:** Module 2- Interpret sedimentation processes.

Interpret sedimentation processes. Interpret definition/meaning of sedimentation. Interpret steps, application of sedimentation. Technical terms English-Malayalam interpretation.

## Interpret industrial filtration operations.

Interpret industrial filtration operations. is an official topic in Module 2 of Mechanical Operations. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

### Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

### Study points

- Define or identify Interpret industrial filtration operations. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

### Engineering or professional relevance

In Polytechnic practice, interpret industrial filtration operations. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

#### Topic study guide

| Aspect              | What to prepare                                                                       |
|---------------------|---------------------------------------------------------------------------------------|
| Definition/identity | What Interpret industrial filtration operations. means in the official course context |
| Study lens          | Principle → components or stages → result → application                               |

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

**Malayalam support:** Module 2-ഈ Interpret industrial filtration operations. ഏകദേശം definition/meaning ഏകദേശം. ഏകദേശം ഏകദേശം, steps, application ഏകദേശം ഏകദേശം. Technical terms English-ഈ ഏകദേശം ഏകദേശം.

**Comprehend centrifuging operation. 2 Understanding. Settling: Types of settling - Stokes law - Define terminal settling velocity. Sedimentation - Batch and continuous sedimentation - Kynch theory - Estimation of thickener area - Illustrate continuous thickener - Illustrate Double cone classifier - Illustrate Tabling, Jigging and Froth floatation. Filtration - Classify filtration equipment based on external force, operation, and nature of filtration - Illustrate the working of sand filter, washing and non-washing plate and frame filter press, leaf filter and Rotary Drum Filter - List the factors affecting rate of filtration - Role of filter aids in filtration - List the commonly used filter aids - Differentiate compressible and non-compressible filter cakes - Differentiate constant pressure filtration and constant volume filtration. Centrifugation: List the classification of centrifuges based on operation and the drive position. Illustrate the working top driven centrifuge, bottom driven centrifuge, disc centrifuge and super centrifuge.**

Comprehend centrifuging operation. 2 Understanding. Settling: Types of settling - Stokes law - Define terminal settling velocity. ## Official syllabus detail and terminology

The following excerpt preserves official syllabus terminology for this module.  
Educational explanations below are separate elaboration.

Interpret solid - liquid separation equipments.

M2.01 Comprehend the principles of settling. 4

Understanding

M2.02 Interpret sedimentation processes. 4

Applying

M2.03 Interpret industrial filtration operations. 4

Understanding

M2.04 Comprehend centrifuging operation. 2

Understanding.

Series Test – I

Contents:

Settling: Types of settling - Stokes law – Define terminal settling velocity.

Sedimentation - Batch and continuous sedimentation - Kynch theory – Estimation of thickener area - Illustrate continuous thickener - Illustrate Double cone classifier - Illustrate

Tabling, Jigging and Froth floatation.

Filtration – Classify filtration equipment based on external force, operation, and nature of

filtration - Illustrate the working of sand filter, washing and non-washing plate and frame

filter press, leaf filter and Rotary Drum Filter - List the factors affecting rate of filtration -

Role of filter aids in filtration - List the commonly used filter aids -

Differentiate

compressible and non-compressible filter cakes - Differentiate constant pressure filtration

**Module study routine:** Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

### MODULE 3

## Summarise the industrial operations agitation and mixing.

This module is presented from the official syllabus scope for Mechanical Operations.  
Use the topic cards for learning and the source transcript for exact coverage.

**As specified**  
official hours

**CO-linked**  
see outcomes

## Learning goals

- Explain the official Module 3 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

## Key facts

- Official module title: Summarise the industrial operations agitation and mixing.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

## Outline agitation operation.

Outline agitation operation. is an official topic in Module 3 of Mechanical Operations. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

### Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

### Study points

- Define or identify Outline agitation operation. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

### Engineering or professional relevance

In Polytechnic practice, outline agitation operation. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

#### Topic study guide

| Aspect              | What to prepare                                                                   |
|---------------------|-----------------------------------------------------------------------------------|
| Definition/identity | What Outline agitation operation. means in the official course context            |
| Study lens          | Principle → components or stages → result → application                           |
| Exam evidence       | Definition, labelled explanation, comparison, procedure or example as appropriate |

**Exam tip:** Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

| Aspect              | What to prepare                                                                                                                        |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Definition/identity | What Summarise agitation equipment. 4 Understanding Identify the dimensionless numbers related to means in the official course context |
| Study lens          | Principle → components or stages → result → application                                                                                |
| Exam evidence       | Definition, labelled explanation, comparison, procedure or example as appropriate                                                      |

**Exam tip:** Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

**Malayalam support:** Module 3-എം Summarise agitation equipment. 4

Understanding Identify the dimensionless numbers related to എം definition/meaning എം. എം എം, steps, application എം എം. Technical terms English-എം എം എം.

## 4 Understanding agitation operation.

4 Understanding agitation operation. is an official topic in Module 3 of Mechanical Operations. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

### Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

### Study points

- Define or identify 4 Understanding agitation operation. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

### Engineering or professional relevance

In Polytechnic practice, 4 understanding agitation operation. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

#### Topic study guide

| Aspect              | What to prepare                                                                   |

|               | agitation operation.                        |   |
| M3.04         | Summarise the working of mixing equipments. | 4 |
| Understanding |                                             |   |

Contents:

Agitation: Define Agitation - List the purpose of agitation - Flow pattern in agitated vessels.

Agitation equipment: Illustrate agitation equipment - Types of Impellers, Sketch of propellers paddles and turbines – Identify the function of draft tube and Baffle.

State: Power number, Froude Number and Reynold's no.

Mixing: Illustrate dry mixer, Banbury mixer, 'V' type mixer and kneading machine.

**Module study routine:** Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

### MODULE 4

## Summarise the handling of solids in chemical process industries.

This module is presented from the official syllabus scope for Mechanical Operations.  
Use the topic cards for learning and the source transcript for exact coverage.

As specified

CO-linked

## Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

## Key facts

- Official module title: Summarise the handling of solids in chemical process industries.
- Official duration: As specified
- Official topic entries captured: 3
- The full source excerpt is preserved below for coverage checking.

## Summarise the storage of solids in industries.

Summarise the storage of solids in industries. is an official topic in Module 4 of Mechanical Operations. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

### Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

### Study points

- Define or identify Summarise the storage of solids in industries. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

### Engineering or professional relevance

In Polytechnic practice, summarise the storage of solids in industries. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

#### Topic study guide

| Aspect              | What to prepare                                                                          |

| Study lens          | Principle → components or stages → result → application                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Exam evidence       | Definition, labelled explanation, comparison, procedure or example as appropriate                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**Exam tip:** Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

**Common mistakes:** Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

**Malayalam support:** Module 4-ഓഓ Comprehend pneumatic conveying systems. 3 Understanding Storage of solids- Hoppers, bins, silos - Angle of repose - Open storage of solids. Classification of conveyors - Illustrate Belt conveyor, Apron conveyor, Screw conveyor, Bucket elevator. Illustrate Pneumatic conveying system - Illustrate the construction and working of cyclone separator, bag filter and ESP. ## Official syllabus detail and terminology

The following excerpt preserves official syllabus terminology for this module.  
Educational explanations below are separate elaboration.

Summarise the handling of solids in chemical process industries.

|               |                                                |   |
|---------------|------------------------------------------------|---|
| M4.01         | Summarise the storage of solids in industries. | 2 |
| Understanding |                                                |   |

|               |                                          |   |
|---------------|------------------------------------------|---|

### Series Test – II

Contents:

Storage of solids- Hoppers, bins, silos - Angle of repose - Open storage of solids.

Classification of conveyors – Illustrate Belt conveyor, Apron conveyor, Screw conveyor, Bucket elevator.

Illustrate Pneumatic conveying system - Illustrate the construction and working of cyclone separator, bag filter and ESP.

**Module study routine:** Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

## RAPID REFERENCE

## Concept and formula bank

### Answer structure

Definition → Principle → Components/steps → Application → Conclusion

Use this sequence for descriptive questions when the topic does not require a numerical formula.

## Practical record

Aim → Apparatus → Procedure → Observation → Result → Safety

Use this sequence for laboratory, workshop and field activities.

### RAPID REVISION

## Diagram and source-transcript library

### Module 1 source and topic cards

Jump to official terminology, topic explanations and study guidance.

### Module 2 source and topic cards

Jump to official terminology, topic explanations and study guidance.

### Module 3 source and topic cards

Jump to official terminology, topic explanations and study guidance.

### Module 4 source and topic cards

Jump to official terminology, topic explanations and study guidance.

### OFFICIAL SELF-LEARNING

# Activities from the syllabus

Use the extracted official activity wording as the record of required self-learning work.

The official PDF does not expose a separate activities heading in the extracted text; consult the source PDF pages for the exact activity list.

## EXAMINATION PREPARATION

### Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

**Practice-paper notice:** The model paper below is generated for revision and is not an official examination paper.

## ACTIVE RECALL

### Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

#### Module 1

**Define or explain Comprehend the properties of particles. 2 Understanding.. (3 marks)**

**Answer:** Begin with the standard definition or identity of *Comprehend the properties of particles. 2 Understanding..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

**Define or explain Summarise size reduction. 1 Understanding.. (3 marks)**

**Answer:** Begin with the standard definition or identity of *Summarise size reduction. 1 Understanding..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

**Define or explain Illustrate size reduction equipment. 3 Understanding.. (3 marks)**

**Answer:** Begin with the standard definition or identity of *Illustrate size reduction equipment. 3 Understanding..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

**Define or explain Comprehend the theories behind crushing. 1 Understanding.. (3 marks)**

**Answer:** Begin with the standard definition or identity of *Comprehend the theories behind crushing. 1 Understanding..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

## Module 2

### Define or explain Comprehend the principles of settling.. (3 marks)

**Answer:** Begin with the standard definition or identity of *Comprehend the principles of settling*.. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

### Define or explain Interpret sedimentation processes.. (3 marks)

**Answer:** Begin with the standard definition or identity of *Interpret sedimentation processes*.. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

### Define or explain Interpret industrial filtration operations.. (3 marks)

**Answer:** Begin with the standard definition or identity of *Interpret industrial filtration operations*.. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

**Define or explain Comprehend centrifuging operation. 2 Understanding.**  
**Settling: Types of settling - Stokes law - Define terminal settling velocity.**  
**Sedimentation - Batch and continuous sedimentation - Kynch theory -**  
**Estimation of thickener area - Illustrate continuous thickener -Illustrate**  
**Double cone classifier - Illustrate Tabling, Jigging and Froth floatation.**

**Filtration** -Classify filtration equipment based on external force, operation, and nature of filtration - Illustrate the working of sand filter, washing and non-washing plate and frame filter press, leaf filter and Rotary Drum Filter - List the factors affecting rate of filtration - Role of filter aids in filtration - List the commonly used filter aids - Differentiate compressible and non-compressible filter cakes - Differentiate constant pressure filtration and constant volume filtration. **Centrifugation:** List the classification of centrifuges based on operation and the drive position. Illustrate the working top driven centrifuge, bottom driven centrifuge, disc centrifuge and super centrifuge.. (3 marks)

**Answer:** Begin with the standard definition or identity of *Comprehend centrifuging operation*. 2 *Understanding*. *Settling: Types of settling - Stokes law - Define terminal settling velocity. Sedimentation - Batch and continuous sedimentation - Kynch theory - Estimation of thickener area - Illustrate continuous thickener -Illustrate Double cone classifier - Illustrate Tabling, Jigging and Froth floatation. Filtration* -Classify filtration equipment based on external force, operation, and nature of filtration - Illustrate the working of sand filter, washing and non-washing plate and frame filter press, leaf filter and Rotary Drum Filter - List the factors affecting rate of filtration - Role of filter aids in filtration - List the commonly used filter aids - Differentiate compressible and non-compressible filter cakes - Differentiate constant pressure filtration and constant volume filtration. *Centrifugation:* List the classification of centrifuges based on operation and the drive position. Illustrate the working top driven centrifuge, bottom driven centrifuge, disc centrifuge and super centrifuge.. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

## Module 3

**Define or explain Outline agitation operation.. (3 marks)**

**Answer:** Begin with the standard definition or identity of *Outline agitation operation*.. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

**Define or explain Summarise agitation equipment. 4 Understanding Identify the dimensionless numbers related to. (3 marks)**

**Answer:** Begin with the standard definition or identity of *Summarise agitation equipment. 4 Understanding Identify the dimensionless numbers related to*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

**Define or explain 4 Understanding agitation operation.. (3 marks)**

**Answer:** Begin with the standard definition or identity of *4 Understanding agitation operation..*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

**Define or explain Summarise the working of mixing equipments. 4 Understanding Agitation: Define Agitation - List the purpose of agitation - Flow pattern in agitated vessels. Agitation equipment: Illustrate agitation equipment - Types of Impellers, Sketch of propellers paddles and turbines - Identify the function of draft tube and Baffle. State: Power number, Froude Number and Reynold's no. Mixing: Illustrate dry mixer, Banbury mixer, 'V' type mixer and kneading machine.. (3 marks)**

**Answer:** Begin with the standard definition or identity of *Summarise the working of mixing equipments. 4 Understanding Agitation: Define Agitation - List the purpose of agitation - Flow pattern in agitated vessels. Agitation equipment: Illustrate agitation equipment - Types of Impellers, Sketch of propellers paddles and turbines - Identify the*

function of draft tube and Baffle. State: Power number, Froude Number and Reynold's no. Mixing: Illustrate dry mixer, Banbury mixer, 'V' type mixer and kneading machine.. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

## Module 4

**Define or explain Summarise the storage of solids in industries.. (3 marks)**

**Answer:** Begin with the standard definition or identity of *Summarise the storage of solids in industries..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

**Define or explain Illustrate mechanical conveying systems.. (3 marks)**

**Answer:** Begin with the standard definition or identity of *Illustrate mechanical conveying systems..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

**Define or explain Comprehend pneumatic conveying systems. 3**

**Understanding Storage of solids- Hoppers, bins, silos - Angle of repose - Open storage of solids. Classification of conveyors - Illustrate Belt conveyor, Apron conveyor, Screw conveyor, Bucket elevator. Illustrate Pneumatic conveying system - Illustrate the construction and working of cyclone separator, bag filter and ESP. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

**Malayalam support:** □ □□□□□□□□□ □□□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

## PRACTICE ONLY

# Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

## Module 1

1-mark definition: State the meaning of **Comprehend the properties of particles**. 2 **Understanding..**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

## Module 2

1-mark definition: State the meaning of **Comprehend the principles of settling..**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

## Module 3

1-mark definition: State the meaning of **Outline agitation operation..**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

## Module 4

1-mark definition: State the meaning of **Summarise the storage of solids in industries..**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

### QUICK REVISION

## Exam checklist

### Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

### Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

## REFERENCE VOCABULARY

### Glossary

#### Study glossary
