SIXTH SEMESTER DIPLOMA EXAMINATION IN
ENGINEERING/TECHNOLOGY
MODERN COMMUNICATION SYSTEM

[Time:3 hrs

(Maximum marks: 100)

Marks

PART – A

(Maximum marks: 10)

- I. Answer the following questions in one or two sentences. Each question carries 2 marks
1. Give two application of Reflex Klystron?
 2. What is mean by ISDN?
 3. What is 3 GSM?
 4. What is a wave guide?
 5. Define acceptance angle of a fibre optic cable

PART – B

(Maximum marks: 30)

- II. Answer any five questions .Each question carries 6 marks
1. Write a note on the losses in optical fibres
 2. Explain the need of mobile IP
 3. Explain the working of tunnel diode
 4. Briefly explain CDMA
 5. Describe the GSM network architecture.
 6. Describe the BFSK system
 7. Describe the power control methods in mobile communication

PART – C

(Maximum marks: 60)

(Answer one full question from each unit)

Each question carries 15 marks each

Module I

- III. Describe the operation of QPSK Transmitter & Receiver with the help of functional block diagram
15

OR

- IV. a. Explain MSK System.
7

- b. Describe the architecture of ISDN .8

Module II

- V. Describe the function of microwave repeater with the help of block diagram.
15

OR

- VI. a. Describe the working of TWT. 8
b. Explain the formation of GUN domain in Gunn Diode 7

Module III

- VII. a. Compare the performance of Laser Diodes & LED's used as optical source 8
b Explain the term Numerical aperture and angle acceptance of a fiber 7

OR

- a. Distinguish the working of multi step index & multi graded index fiber .8
b. Write note to the construction and working of PIN diode used in OFC .7

Module IV

- VIII. a. Explain the need for mobile IP 7
b. Describe the power control methods in mobile communication .8

OR

- IX. Explain the GSM network architecture
15
