Sixth Semester Diploma Examination in Engineering / Technology
Electronics and Avionics

Telemetry and Remote Sensing

[Time : 3 Hours]

(Maximum Marks : 100)

Marks

PART - A

(Answer all questions in one or two sentences. Each question carries 2 marks)

- I
1. State the principle of magnetic recording.
 2. Interpret tele command.
 3. List out the elements of image interpretation system.
 4. Summarize the function of stereoscope in image interpretation.
 5. Differentiate the three important functions of GIS.

(5 x 2 = 10)

PART - B

(Answer any five questions. Each question carries 6 marks)

- II
1. Compare FM and PCM telemetry system.
 2. Describe a general telemetry system.
 3. Draw the electromagnetic spectrum.
 4. List the applications of remote sensing in hydrology.
 5. State the need of image interpretation.
 6. Explain the need of band combination.
 7. List the applications of GIS.

(5 x 6 = 30)

PART - C

(Answer one full question from each unit. Each full question carries 15 marks)

Unit - I

- III Outline the role of DAC and ADC in data acquisition system. (15)

Or

- IV
1. Explain PCM telemetry system. (10)
 2. Explain the operation of UV recorder. (5)

Unit - II

- V Explain the application of remote sensing in (i) Agriculture feild (ii) hydrology (iii) soli moisture. (15)

Or

- VI 1. Propose the need of telemtry tracking and command subsystem. (10)
2. Compare the different imaging system of satellites. (5)

Unit - III

- VII State the use of hardware and software in handling images. (15)

Or

- VIII 1. State the uses of image interpretation elements. (10)
2. List the different types of data products. (5)

Unit - IV

- IX Explain the various data conversion methods used in GIS. (15)

Or

- X 1. Explain the effects of space craft velocity and mirror velocity. (10)
2. Interpret scan skew distortion. (5)
