

SIXTH SEMESTER DIPLOMA EXAMINATION IN ENGINEERING/TECHNOLOGY

MODEL QUESTION PAPER
SOFTWARE TESTING

[Time: 3 Hours]

(Maximum marks: 100)

PART – A

I Answer all questions. (Each question carries two marks.)

1. Define system bugs.
2. State the term mutant.
3. State the needs of White-Box testing.
4. State two reasons for Alpha testing.
5. Name any four open source testing tools.

PART – B

II Answer any five questions. Each question carries six marks

1. Explain the life cycle of a bug with a neat diagram .
2. Outline the points against which the code must be verified while conducting low level design.
3. Write down the application of path testing
4. Describe the test case design using decision table with a suitable example.
5. Explain the structured walk through process
6. State the needs/benefits of automation of testing tools.
7. “Debugging is difficult” - Judge this statement.

PART – C

MODULE - I

III. Explain Software Testing Life Cycle with a neat figure

(15 marks)

OR

IV. a Explain the states of a bug with a neat flow diagram.

(10 marks)

b Write a short description on three levels of validation testing.

(5 marks)

Module II

- V a Summarize state table based and decision table based testing 8
- b List and explain the mutation testing process 7

OR

- VI a Explain Equivalence class and Error guessing testing techniques 8
- b Define white box testing and write down the need of this testing 7

Module III

- VII. a) Explain about unit validation testing. 8
- b) Explain about system testing. 7

or

- VIII. a) Explain in detail regression testing techniques. 15

MODULE – IV

- IX.a State the goal of debugging process. Explain debugging process with the help neat sketch. (9 marks)
- b Describe the strategy for testing an Object Oriented Software. (6 marks)

OR

- X.a Explain the testing of web based systems. (9 marks)
- b Outline the guidelines of debugging. (6 marks)
