2. Write your Register Number only in the space provided for the purpose in the Answer Book
 3. Do not write / type your name on the answer sheet
 4. Special care should be taken for neatness and accuracy.)

According to the Population Projections for India and States 1996-2016, the Registrar – General of India (1996). India will be able to achieve the Total Fertility Rate (TFR) only in 2026 AD. While Kerala achieved this target in 1988 and Tamil Nadu in 1993. Andhra Pradesh may achieve this target in 2002, Karnataka in 2009, Maharashtra in 2008. Orissa in 2010, Gujarat in 2014. Assam 2015, Punjab in 2019 and Haryana 2025. Contrast this with the year when the States of Bihar, UP, Rajasthan and Madhya Pradesh will attain this target. According to the Registrar- General, Bihar will reach this target in 2039, Rajasthan in 2048, Madhya Pradesh beyond 2060 and Uttar Pradesh in 2100!

One we know the secret of success of States that have had a better record, it would be worthwhile whether the contributory factors to success can be emulated by the States to help themselves leapfrog with the progress made by the success models. How on earth could Tamil Nadu and Andhra Pradesh, with dismal record in female literacy, high in fact mortality rate and a low mean age of marriage, could wreak a miracle in slowing down the population juggernaut?

Be it the DMK or AIADMK, the social security measures like the mid-day meals scheme introduced by MGR. Benefitting over seven million children in Tamil Nadu, the special nutrition program and the special, schemes for the unorganized labour that constitute 90 per cent of the labour force and a multiplier effect leading to women empowerment. This apart, the State has a strong NGO base, and through the 70s and 80s population control remained the concern not only of the Health Department, but of other departments like Education, Social Welfare, Rural Development, Agriculture, Transport, Revenue, etc. Likewise, positive political leadership, with launching of social welfare programs, empowerment of women and the like under the leadership of TPD leaders could have quickened the process of change in Andhra Pradesh.

India has enough models within the country and the success of a few States could be replicated elsewhere, with changes here and there, depending upon the local conditions. What is to be borne in mind is that population.
