

Course 5333A

5 Credits: 4

Program core

Source-grounded

Industrial Robotics

- To familiarize automation and brief history of robot and applications.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 5333A is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5333A.pdf from the uploaded official SITTTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Automation and Robotics
Course code	5333A
Course title	Industrial Robotics
Semester	5 Credits: 4
Course category	Program core
Periods per week	4 (L:4 T:0 P:0) Periods per semester: 60
Periods per semester	60

Item	Official information
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

16 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD

How to use this lesson

First pass

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- To familiarize automation and brief history of robot and applications.
- To study the control strategies used in industrial robots.
- To give knowledge about robot end effectors and their design.
- To learn about work cell design and robot cycle time analysis.

Course outcomes

CO	Official outcome	Study level
CO1	15 Understanding different control strategies and controllers Understand about different type of actuators and	See official syllabus
CO2	15 Understanding sensor devices used in robots. Understand Material Transfer and handling	See official syllabus
CO3	14 Understanding applications of Robots Understand about work cell design and robot	See official syllabus
CO4	14 Understanding cycle time analysis.	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3
CO2	CO2 3 2
CO3	CO3 3
CO4	CO4 3

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	strategies and controllers	4	As specified
Module 2	robots	4	As specified
Module 3	Understand Material Transfer and handling applications of Robots	4	As specified
Module 4	Understand about work cell design and robot cycle time analysis.	4	As specified

MODULE 1

strategies and controllers

This module is presented from the official syllabus scope for Industrial Robotics. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: strategies and controllers
- Official duration: As specified
- Official topic entries captured: 4

- The full source excerpt is preserved below for coverage checking.

Understand Automation and Robot anatomy 3 Understanding Understand different configuration of robots

Understand Automation and Robot anatomy 3 Understanding Understand different configuration of robots is an official topic in Module 1 of Industrial Robotics. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Understand Automation and Robot anatomy 3 Understanding Understand different configuration of robots using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, understand automation and robot anatomy 3 understanding understand different configuration of robots should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Understand Automation and Robot anatomy 3 Understanding Understand different configuration of robots means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-റോബോട്ടിക്സ് Understand Automation and Robot anatomy 3 Understanding Understand different configuration of robots റോബോട്ടിക്സ് റോബോട്ടിക്സ് definition/meaning റോബോട്ടിക്സ് റോബോട്ടിക്സ്. റോബോട്ടിക്സ് റോബോട്ടിക്സ് റോബോട്ടിക്സ്, steps, application റോബോട്ടിക്സ് റോബോട്ടിക്സ് റോബോട്ടിക്സ്. Technical terms English-റോബോട്ടിക്സ് റോബോട്ടിക്സ് റോബോട്ടിക്സ്.

4 Understanding and joint notation schemes.

4 Understanding and joint notation schemes. is an official topic in Module 1 of Industrial Robotics. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding and joint notation schemes. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding and joint notation schemes. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 4 Understanding and joint notation schemes. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-4 Understanding and joint notation schemes.
പ്രവർത്തനങ്ങൾക്ക് നിർവ്വചന/അർത്ഥം നൽകുന്നു. പ്രവർത്തനങ്ങൾക്ക് ഘട്ടങ്ങൾ,
steps, application പ്രവർത്തനങ്ങൾ നൽകുന്നു. Technical terms English-ൽ പ്രവർത്തന
പ്രവർത്തനങ്ങൾ.

Understand Basic control system models. 4 Understanding Understand controllers used in Robot system

Understand Basic control system models. 4 Understanding Understand controllers used in Robot system is an official topic in Module 1 of Industrial Robotics. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Understand Basic control system models. 4 Understanding Understand controllers used in Robot system using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, understand basic control system models. 4 understanding understand controllers used in robot system should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Understand Basic control system models. 4 Understanding Understand controllers used in Robot system means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

4 Understanding models. notation schemes, work volume, Basic control system models, slew motion, joint – interpolated motion and straight-line motion, controllers like on/off, proportional, integral, proportional plus integral, proportional plus derivative, proportional plus integral plus derivative. Understand about different type of actuators and sensor devices used in

4 Understanding models. notation schemes, work volume, Basic control system models, slew motion, joint – interpolated motion and straight-line motion, controllers like on/off, proportional, integral, proportional plus integral, proportional plus derivative, proportional plus integral plus derivative. Understand about different type of actuators and sensor devices used in is an official topic in Module 1 of Industrial Robotics. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding models. notation schemes, work volume, Basic control system models, slew motion, joint – interpolated motion and straight-line motion, controllers like on/off, proportional, integral, proportional plus integral, proportional plus derivative, proportional plus integral plus derivative. Understand about different type of actuators and sensor devices used in using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding models. notation schemes, work volume, basic control system models, slew motion, joint – interpolated motion and straight-line motion, controllers like on/off, proportional, integral, proportional plus integral, proportional plus derivative, proportional plus integral plus derivative. understand about different type of actuators and sensor devices used in should be discussed with

attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 4 Understanding models. notation schemes, work volume, Basic control system models, slew motion, joint – interpolated motion and straight-line motion, controllers like on/off, proportional, integral, proportional plus integral, proportional plus derivative, proportional plus integral plus derivative. Understand about different type of actuators and sensor devices used in means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-4 Understanding models, notation schemes, work volume, Basic control system models, slew motion, joint – interpolated motion and straight-line motion, controllers like on/off, proportional, integral, proportional plus integral, proportional plus derivative, proportional plus integral plus derivative. Understand about different type of actuators and sensor devices used in manufacturing systems. definition/meaning of manufacturing systems. steps, application of manufacturing systems. Technical terms English-Malayalam.

Official syllabus detail and terminology

The following excerpt preserves official syllabus terminology for this module.
Educational explanations below are separate elaboration.

strategies and controllers

M1.01 Understanding	Understand Automation and Robot anatomy	3
M1.02 Understanding	Understand different configuration of robots and joint notation schemes.	4
M1.03 Understanding	Understand Basic control system models.	4
M1.04 Understanding	Understand controllers used in Robot system models. Contents: Automation and Robotics, Robot anatomy, configuration of robots, joint notation schemes, work volume, Basic control system models, slew motion, joint – interpolated motion and straight-line motion, controllers like on/off, proportional, integral, proportional plus integral, proportional plus derivative, proportional plus integral plus derivative. Understand about different type of actuators and sensor devices	4

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 2

robots

This module is presented from the official syllabus scope for Industrial Robotics. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: robots

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3-എന്നു machining and stamping operations using 4 Understanding robots applications, pick and place operations, palletizing and related operations, machine loading and unloading, die casting, plastic molding, forging, machining operations, stamping press operations using robots.

എന്നതിന്റെ definition/meaning എഴുതുക. എന്നതിന്റെ steps, application എഴുതുക. Technical terms English-ൽ എഴുതുക.

Official syllabus detail and terminology

The following excerpt preserves official syllabus terminology for this module. Educational explanations below are separate elaboration.

Understand Material Transfer and handling applications of Robots

M3.01 Understand about the general considerations in robot material handling and transfer applications. 4

M3.02 Understand about pick and place operations and palletizing operations 3

M3.03 Understand about machine loading and unloading operations 3

M3.04 Understand about molding, forging, machining and stamping operations using robots 4

Contents: General considerations in robot material handling, material transfer applications, pick and place operations, palletizing and related operations, machine loading and unloading, die casting, plastic molding, forging, machining operations, stamping press operations using robots.

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 4

Understand about work cell design and robot cycle time analysis.

This module is presented from the official syllabus scope for Industrial Robotics. Use the topic cards for learning and the source transcript for exact coverage.

As specified

CO-linked

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Understand about work cell design and robot cycle time analysis.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

4 Understanding Robots - machine interface. Understand about work cell design and work

4 Understanding Robots - machine interface. Understand about work cell design and work is an official topic in Module 4 of Industrial Robotics. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding Robots - machine interface. Understand about work cell design and work using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding robots - machine interface. understand about work cell design and work should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 4 Understanding Robots - machine interface. Understand about work cell design and work means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4- 4 Understanding Robots - machine interface. Understand about work cell design and work cell definition/meaning. Steps, application. Technical terms English- Malayalam.

3 Understanding cell control Understand about error detection and

3 Understanding cell control Understand about error detection and is an official topic in Module 4 of Industrial Robotics. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding cell control Understand about error detection and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding cell control understand about error detection and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Understanding cell control Understand about error detection and means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related

but different term.

Malayalam support: Module 4-3 Understanding cell control Understand about error detection and definition/meaning.
 steps, application. Technical terms English-

3 Understanding recovery in robotic systems

3 Understanding recovery in robotic systems is an official topic in Module 4 of Industrial Robotics. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding recovery in robotic systems using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding recovery in robotic systems should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Understanding recovery in robotic systems means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4-3 Understanding recovery in robotic systems
രൂപരേഖ definition/meaning രൂപരേഖ രൂപരേഖ, steps, application രൂപരേഖ രൂപരേഖ രൂപരേഖ. Technical terms English- രൂപരേഖ രൂപരേഖ.

Understand about robot cycle time analysis. 4 Understanding considerations in work cell design, work cell control, interlocks, error detection and recovery, work cell controller, robot cycle time analysis. Text / Reference T/R Book Title/Author Richard D. Klafter, Thomas A. Chmielewski and Michael Negin, "Robotic T1 Engineering - An Integrated Approach", Prentice Hall India, 2002 R1 Deb S.R., " Robotics Technology and Flexible Automation ", Tata McGraw-Hill, Publishing Co., Ltd., 1994. OFFICIAL SELF-LEARNING

Activities from the syllabus

Use the extracted official activity wording as the record of required self-learning work.

The official PDF does not expose a separate activities heading in the extracted text; consult the source PDF pages for the exact activity list.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

Define or explain Understand Automation and Robot anatomy 3 Understanding Understand different configuration of robots. (3 marks)

Answer: Begin with the standard definition or identity of *Understand Automation and Robot anatomy 3 Understanding Understand different configuration of robots*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 4 Understanding and joint notation schemes.. (3 marks)

Answer: Begin with the standard definition or identity of *4 Understanding and joint notation schemes..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Understand Basic control system models. 4 Understanding Understand controllers used in Robot system. (3 marks)

Answer: Begin with the standard definition or identity of *Understand Basic control system models. 4 Understanding Understand controllers used in Robot system.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 4 Understanding models. notation schemes, work volume, Basic control system models, slew motion, joint - interpolated motion and straight-line motion, controllers like on/off, proportional, integral, proportional plus integral, proportional plus derivative, proportional plus integral plus derivative. Understand about different type of actuators and sensor devices used in. (3 marks)

Answer: Begin with the standard definition or identity of *4 Understanding models. notation schemes, work volume, Basic control system models, slew motion, joint - interpolated motion and straight-line motion, controllers like on/off, proportional, integral, proportional plus integral, proportional plus derivative, proportional plus integral plus derivative.* Understand about different type of actuators and sensor

devices used in. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Module 2

Define or explain 3 Understanding components. Understand about position / velocity sensors,. (3 marks)

Answer: Begin with the standard definition or identity of *3 Understanding components. Understand about position / velocity sensors,.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 4 Understanding actuators and power transmission devices.. (3 marks)

Answer: Begin with the standard definition or identity of *4 Understanding actuators and power transmission devices..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Understand about different type of Grippers. 4 Understanding Understand different methods of power and. (3 marks)

Answer: Begin with the standard definition or identity of *Understand about different type of Grippers. 4 Understanding Understand different methods of power and.* State the governing principle, list the key components or stages, and close with one relevant

application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

Define or explain 4 Understanding control signals to end effectors. actuators and power transmission devices, mechanical grippers, vacuum cups, magnetic grippers, pneumatic, electric, hydraulic and mechanical methods of power and control signals to end effectors.. (3 marks)

Answer: Begin with the standard definition or identity of *4 Understanding control signals to end effectors. actuators and power transmission devices, mechanical grippers, vacuum cups, magnetic grippers, pneumatic, electric, hydraulic and mechanical methods of power and control signals to end effectors..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

Module 3

Define or explain in robot material handling and transfer 4 Understanding applications. Understand about pick and place operations. (3 marks)

Answer: Begin with the standard definition or identity of *in robot material handling and transfer 4 Understanding applications. Understand about pick and place operations.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

Define or explain 3 Understanding and palletizing operations Understand about machine loading and. (3 marks)

Answer: Begin with the standard definition or identity of *3 Understanding and palletizing operations Understand about machine loading and*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 3 Understanding unloading operations Understand about molding, forging,. (3 marks)

Answer: Begin with the standard definition or identity of *3 Understanding unloading operations Understand about molding, forging,.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain machining and stamping operations using 4 Understanding robots applications, pick and place operations, palletizing and related operations, machine loading and unloading, die casting, plastic molding, forging, machining operations, stamping press operations using robots.. (3 marks)

Answer: Begin with the standard definition or identity of *machining and stamping operations using 4 Understanding robots applications, pick and place operations, palletizing and related operations, machine loading and unloading, die casting, plastic molding, forging, machining operations, stamping press operations using robots..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 4 Understanding Robots - machine interface. Understand about work cell design and work. (3 marks)

Answer: Begin with the standard definition or identity of *4 Understanding Robots - machine interface. Understand about work cell design and work*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 3 Understanding cell control Understand about error detection and. (3 marks)

Answer: Begin with the standard definition or identity of *3 Understanding cell control Understand about error detection and*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 3 Understanding recovery in robotic systems. (3 marks)

Answer: Begin with the standard definition or identity of *3 Understanding recovery in robotic systems*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Understand about robot cycle time analysis. 4 Understanding considerations in work cell design, work cell control, interlocks, error detection and recovery, work cell controller, robot cycle time analysis. Text / Reference T/R Book Title/Author Richard D. Klafter, Thomas A. Chmielewski and Michael Negin, "Robotic T1 Engineering - An Integrated

Approach", Prentice Hall India, 2002 R1 Deb S.R., " Robotics Technology and Flexible Automation ", Tata McGraw- Hill, Publishing Co., Ltd., 1994. R2 K.S. PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **Understand Automation and Robot anatomy 3 Understanding Understand different configuration of robots**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **3 Understanding components. Understand about position / velocity sensors,**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **in robot material handling and transfer 4 Understanding applications. Understand about pick and place operations.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 4

1-mark definition: State the meaning of **4 Understanding Robots - machine interface. Understand about work cell design and work.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
