Item	Official information
Programme	Diploma in Tool & Die Engineering
Course code	4111
Course title	Fluid Mechanics & Heat Transfer
Semester	4 Credits: 4
Course category	Program Core

Item	Official information
Periods per week	4 (L:3, T:1, P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

16 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD

How to use this lesson

First pass

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- □ To establish fundamental knowledge of basic fluid mechanics and address specific
- □ To familiarize students with the relevance of fluid dynamics to many engineering
- □ To appreciate basics of hydraulic and pneumatic systems
- □ To introduce the basics of thermodynamics and modes of heat transfer

Course outcomes

CO	Official outcome	Study level
CO1	15 Applying devices and hydrostatic forces Investigate the applications of laws of conservation of momentum, mass and energy in fluid flow	See official syllabus
CO2	14 Applying systems and the characteristics of flow through pipes, orifices and notches Distinguish the components and basic circuits in	See official syllabus
CO3	15 Understanding hydraulic and pneumatic systems Illustrate the basic thermodynamics principles and	See official syllabus
CO4	14 Applying different modes of heat transfer	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3 2
CO2	CO2 3 3
CO3	CO3 2
CO4	CO4 3

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	forces	4	As specified
Module 2	and energy in fluid flow systems and the characteristics of flow though	4	As specified
Module 3	systems	5	As specified
Module 4	heat transfer	3	As specified

MODULE 1

forces

This module is presented from the official syllabus scope for Fluid Mechanics & Heat Transfer. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: forces
- Official duration: As specified
- Official topic entries captured: 4

- The full source excerpt is preserved below for coverage checking.

Explain fluid properties 3 Understanding Explain the Fluid Pressure and the methods of

Explain fluid properties 3 Understanding Explain the Fluid Pressure and the methods of is an official topic in Module 1 of Fluid Mechanics & Heat Transfer. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Explain fluid properties 3 Understanding Explain the Fluid Pressure and the methods of using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, explain fluid properties 3 understanding explain the fluid pressure and the methods of should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Explain fluid properties 3 Understanding Explain the Fluid Pressure and the methods of means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- Explain fluid properties 3 Understanding Explain the Fluid Pressure and the methods of $\frac{F}{A}$ definition/meaning $\frac{F}{A}$. $\frac{F}{A}$ $\frac{F}{A}$ $\frac{F}{A}$, steps, application $\frac{F}{A}$ $\frac{F}{A}$. Technical terms English- $\frac{F}{A}$ $\frac{F}{A}$.

4 Understanding measurement Illustrate the principle of working of various

4 Understanding measurement Illustrate the principle of working of various is an official topic in Module 1 of Fluid Mechanics & Heat Transfer. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding measurement Illustrate the principle of working of various using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding measurement illustrate the principle of working of various should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 4 Understanding measurement Illustrate the principle of working of various means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related

but different term.

Malayalam support: Module 1-4 Understanding measurement Illustrate the principle of working of various measurement instruments definition/meaning of measurement. Steps, application of measurement. Technical terms English- Malayalam.

pressure measuring devices and solve simple 4 Applying problems on those Interpret the terms total pressure & buoyancy

pressure measuring devices and solve simple 4 Applying problems on those Interpret the terms total pressure & buoyancy is an official topic in Module 1 of Fluid Mechanics & Heat Transfer. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify pressure measuring devices and solve simple 4 Applying problems on those Interpret the terms total pressure & buoyancy using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, pressure measuring devices and solve simple 4 applying problems on those interpret the terms total pressure & buoyancy should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare

Summarize the features and functions of $\frac{1}{x}$ definition/meaning $\frac{1}{x}$. $\frac{1}{x}$ $\frac{1}{x}$ $\frac{1}{x}$, steps, application $\frac{1}{x}$ $\frac{1}{x}$. Technical terms English- $\frac{1}{x}$ $\frac{1}{x}$ $\frac{1}{x}$.

various components of hydraulic and 4 Understanding pneumatic systems

Identify various Hydraulic and Pneumatic

various components of hydraulic and 4 Understanding pneumatic systems
Identify various Hydraulic and Pneumatic is an official topic in Module 3 of Fluid Mechanics & Heat Transfer. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify various components of hydraulic and 4 Understanding pneumatic systems Identify various Hydraulic and Pneumatic using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, various components of hydraulic and 4 understanding pneumatic systems identify various hydraulic and pneumatic should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What various components of hydraulic and 4 Understanding pneumatic systems Identify various Hydraulic and Pneumatic means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- various components of hydraulic and 4 Understanding pneumatic systems Identify various Hydraulic and Pneumatic components definition/meaning. steps, application Technical terms English-
definition/meaning. steps, application Technical terms English-
definition/meaning.

2 Remembering symbols Describe the types of valves used in hydraulic

2 Remembering symbols Describe the types of valves used in hydraulic is an official topic in Module 3 of Fluid Mechanics & Heat Transfer. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Remembering symbols Describe the types of valves used in hydraulic using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 remembering symbols describe the types of valves used in hydraulic should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

MODULE 4

heat transfer

This module is presented from the official syllabus scope for Fluid Mechanics & Heat Transfer. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: heat transfer
- Official duration: As specified
- Official topic entries captured: 3
- The full source excerpt is preserved below for coverage checking.

Explain basic concepts in thermodynamics 3 Understanding Interpret the concepts of conduction to solve

Explain basic concepts in thermodynamics 3 Understanding Interpret the concepts of conduction to solve is an official topic in Module 4 of Fluid Mechanics & Heat Transfer. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Explain basic concepts in thermodynamics 3 Understanding Interpret the concepts of conduction to solve using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, explain basic concepts in thermodynamics 3 understanding interpret the concepts of conduction to solve should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

Define or explain Explain fluid properties 3 Understanding Explain the Fluid Pressure and the methods of. (3 marks)

Answer: Begin with the standard definition or identity of *Explain fluid properties 3 Understanding Explain the Fluid Pressure and the methods of*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 4 Understanding measurement Illustrate the principle of working of various. (3 marks)

Answer: Begin with the standard definition or identity of *4 Understanding measurement Illustrate the principle of working of various*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain pressure measuring devices and solve simple 4 Applying problems on those Interpret the terms total pressure & buoyancy. (3 marks)

Answer: Begin with the standard definition or identity of *pressure measuring devices and solve simple 4 Applying problems on those Interpret the terms total pressure & buoyancy*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain and calculate the total pressure on immersed 4 Applying surfaces Properties of fluid: Density, Specific gravity, Specific Weight, Specific Volume, Dynamic Viscosity, Kinematic Viscosity, Surface tension, Capillarity, Vapour Pressure, Compressibility. Numerical problems on fluid properties. Fluid Pressure & Pressure Measurement: Fluid pressure, Pressure head, Pressure intensity, Concept of vacuum and gauge pressures, atmospheric pressure, absolute pressure, Simple and differential manometers, Bourdons pressure gauge, Concept of Total pressure on immersed bodies, center of pressure, Simple problems on pressure measurements Buoyancy and flotation, Archimedes' principle, stability of immersed and floating bodies,

determination of metacentric height. Problems on total pressure. Investigate the applications of laws of conservation of momentum, mass. (3 marks)

Answer: Begin with the standard definition or identity of *and calculate the total pressure on immersed 4 Applying surfaces Properties of fluid: Density, Specific gravity, Specific Weight, Specific Volume, Dynamic Viscosity, Kinematic Viscosity, Surface tension, Capillarity, Vapour Pressure, Compressibility. Numerical problems on fluid properties. Fluid Pressure & Pressure Measurement: Fluid pressure, Pressure head, Pressure intensity, Concept of vacuum and gauge pressures, atmospheric pressure, absolute pressure, Simple and differential manometers, Bourdons pressure gauge, Concept of Total pressure on immersed bodies, center of pressure, Simple problems on pressure measurements Buoyancy and flotation, Archimedes' principle, stability of immersed and floating bodies, determination of metacentric height. Problems on total pressure. Investigate the applications of laws of conservation of momentum, mass.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

Module 2

Define or explain Describe the types of fluid flows 2 Understanding Apply the momentum and energy equations to. (3 marks)

Answer: Begin with the standard definition or identity of *Describe the types of fluid flows 2 Understanding Apply the momentum and energy equations to.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

Define or explain fluid flow problems based on an analysis of 4 Applying the various system specifications Illustrate the concept of flow through pipes,. (3 marks)

Answer: Begin with the standard definition or identity of *fluid flow problems based on an analysis of 4 Applying the various system specifications Illustrate the concept of flow through pipes*,. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 4 Applying orifices & notches List the losses of head in pipes and identify. (3 marks)

Answer: Begin with the standard definition or identity of *4 Applying orifices & notches List the losses of head in pipes and identify*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Major losses and Minor losses and solve 4 Applying problems Fluid Flow: Types of fluid flows, Path line and Stream line, Continuity equation, Bernoulli's theorem, Principle of operation of Venturimeter, Orifice meter and Pitot tube, Derivations for discharge, coefficient of discharge, numerical problems. Flow Through Pipes, Orifices & Notches: Darcy's equation and Chezy's equation for frictional losses (No derivation), Minor losses in pipes, Numerical problems to estimate major and minor losses. Orifices: types of orifices, Vena contracta, coefficient of contraction, coefficient of velocity, coefficient of discharge, simple problems. Notches: Types -Rectangular notches , triangular notch , trapezoidal notch , discharge over notches - equations only, simple numerical problems Distinguish the components and basic circuits in hydraulic and pneumatic. (3 marks)

Answer: Begin with the standard definition or identity of *Major losses and Minor losses and solve 4 Applying problems Fluid Flow: Types of fluid flows, Path line and Stream line, Continuity equation, Bernoulli's theorem, Principle of operation of Venturimeter, Orifice meter and Pitot tube, Derivations for discharge, coefficient of discharge, numerical problems. Flow Through Pipes, Orifices & Notches: Darcy's equation and Chezy's*

equation for frictional losses (No derivation), Minor losses in pipes, Numerical problems to estimate major and minor losses. Orifices: types of orifices, Vena contracta, coefficient of contraction, coefficient of velocity, coefficient of discharge, simple problems. Notches: Types –Rectangular notches , triangular notch , trapezoidal notch , discharge over notches – equations only, simple numerical problems Distinguish the components and basic circuits in hydraulic and pneumatic. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□ □□□□□□.

Module 3

Define or explain 1 Understanding and its applications Summarize the features and functions of. (3 marks)

Answer: Begin with the standard definition or identity of *1 Understanding and its applications Summarize the features and functions of*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□ □□□□□□.

Define or explain various components of hydraulic and 4 Understanding pneumatic systems Identify various Hydraulic and Pneumatic. (3 marks)

Answer: Begin with the standard definition or identity of *various components of hydraulic and 4 Understanding pneumatic systems Identify various Hydraulic and Pneumatic*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□ □□□□□□.

Define or explain 2 Remembering symbols Describe the types of valves used in hydraulic. (3 marks)

Answer: Begin with the standard definition or identity of *2 Remembering symbols Describe the types of valves used in hydraulic*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 4 Understanding and pneumatic systems Explain the working of different types of. (3 marks)

Answer: Begin with the standard definition or identity of *4 Understanding and pneumatic systems Explain the working of different types of*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Module 4

Define or explain Explain basic concepts in thermodynamics 3 Understanding Interpret the concepts of conduction to solve. (3 marks)

Answer: Begin with the standard definition or identity of *Explain basic concepts in thermodynamics 3 Understanding Interpret the concepts of conduction to solve*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain problems involving steady state heat 6 Applying conduction in plane walls.. (3 marks)

Answer: Begin with the standard definition or identity of *problems involving steady state heat 6 Applying conduction in plane walls..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Illustrate concepts of convection and radiation 5 Applying
Introduction to Thermodynamics : Role of Thermodynamics in Engineering and Science, Types of Systems, Thermodynamic Equilibrium, Properties, State, Process and Cycle, Elementary introduction to Zeroth, First and Second laws of thermodynamics, Heat and Work Interactions for various non-flow and flow processes Heat Transfer: Conduction, convection and radiation-Fourier's law of thermal conduction. Thermal conductivity, conduction through a plane wall and composite plane wall - Numerical problems. Thermal radiation - reflection, absorption and transmission, absorptivity, reflectivity and transmissivity, Stefan - Boltzman's law of total radiation. Newton Rikhman equation of Thermal convection, free convection, forced convection. Simple numerical problems on convection and radiation. Text/ Reference: T/R Book Title/Author Rattan S S, "Fluid Mechanics & Hydraulic Machines", Khanna Publishing House, T1 New Delhi, 2019 Yunus. A Cengel and Afshin. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.*

Malayalam support: □ □□□□□□□□□ □□□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and

marks.

Module 1

1-mark definition: State the meaning of **Explain fluid properties 3 Understanding Explain the Fluid Pressure and the methods of.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **Describe the types of fluid flows 2 Understanding Apply the momentum and energy equations to.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **1 Understanding and its applications Summarize the features and functions of.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 4

1-mark definition: State the meaning of **Explain basic concepts in thermodynamics 3 Understanding Interpret the concepts of conduction to solve.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
