4 Credits: 4

Program Core

Source-grounded

Wood Products I

□ To familiarize students with veneer manufacturing process in plywood industry,

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTR syllabus PDF for Course 4121 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 4121.pdf from the uploaded official SITTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Wood and Paper Technology
Course code	4121
Course title	Wood Products I
Semester	4 Credits: 4
Course category	Program Core
Periods per week	4 (L:3, T:1, P:0) Periods per semester: 60
Periods per semester	60

Item	Official information
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

14 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD

How to use this lesson

First pass

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- To familiarize students with veneer manufacturing process in plywood industry,
- possibility of solid and laminated wood, and wood bending processes

Course outcomes

CO	Official outcome	Study level
CO1	15 Understanding production Summaries veneer processing and manufacture	See official syllabus
CO2	14 Understanding of plywood Interpret grading of plywood , testing and	See official syllabus
CO3	15 Applying properties Compare solid wood bending and laminated wood	See official syllabus
CO4	14 Applying bending process	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3
CO2	CO2 3
CO3	CO3 3
CO4	CO4 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Outline the raw materials used for plywood production	4	As specified
Module 2	Summarise veneer processing and manufacture of plywood	4	As specified
Module 3	Interpret grading of plywood, testing and properties	3	As specified
Module 4	Compare solid wood bending and laminated wood bending process	3	As specified

MODULE 1

Outline the raw materials used for plywood production

This module is presented from the official syllabus scope for Wood Products I. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Outline the raw materials used for plywood production
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

1 Remembering manufacturing Explain Processing of Logs Prior to

1 Remembering manufacturing Explain Processing of Logs Prior to is an official topic in Module 1 of Wood Products I. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 1 Remembering manufacturing Explain Processing of Logs Prior to using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 1 remembering manufacturing explain processing of logs prior to should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 1 Remembering manufacturing Explain Processing of Logs Prior to means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related

but different term.

Malayalam support: Module 1- 1 Remembering manufacturing Explain

പ്രോസസ്സിംഗ്. Technical terms English- പ്രോസസ്സിംഗ് പ്രോസസ്സിംഗ്.

5 Understanding Veneering

5 Understanding Veneering is an official topic in Module 1 of Wood Products I. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 5 Understanding Veneering using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 5 understanding veneering should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

- The full source excerpt is preserved below for coverage checking.

Illustrate repairing of Veneer

Illustrate repairing of Veneer is an official topic in Module 2 of Wood Products I. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Illustrate repairing of Veneer using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, illustrate repairing of veneer should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Malayalam support: Module 3- Explain Dimensioning of Plywood
 definition/meaning steps, application Technical terms English-

Outline Grading of Plywood 5 Understanding Grading of Plywoods Physical properties - density, moisture - content, hygroscopic properties, absorption, swelling and shrinkage Mechanical properties - elasticity, rigidity tensile strength, bending Thermal conductivity and acoustical properties Testing of plywood as per BIS code - determination of density, moisture content - glue shear strength, knife test, tensile strength, compressive strength, impact strength bending strength, nail and screw holding power, determination of fire resistance, mycological test, acidity and alkalinity Speciality plywoods, Tea chest plywood, marine plywood, shuttering plywood, fire proof plywood, air craft plywood, preservative treated plywood, metal faced plywood, moulded Plywood.

Outline Grading of Plywood 5 Understanding Grading of Plywoods Physical properties - density, moisture - content, hygroscopic properties, absorption, swelling and shrinkage Mechanical properties - elasticity, rigidity tensile strength, bending Thermal conductivity and acoustical properties Testing of plywood as per BIS code - determination of density, moisture content - glue shear strength, knife test, tensile strength, compressive strength, impact strength bending strength, nail and screw holding power, determination of fire resistance, mycological test, acidity and alkalinity Speciality plywoods, Tea chest plywood, marine plywood, shuttering plywood, fire proof plywood, air craft plywood, preservative treated plywood, metal faced plywood, moulded Plywood. is an official topic in Module 3 of Wood Products I. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Outline Grading of Plywood 5 Understanding Grading of Plywoods Physical properties - density, moisture - content, hygroscopic properties, absorption, swelling and shrinkage Mechanical properties - elasticity, rigidity tensile strength, bending Thermal conductivity and acoustical properties Testing of plywood as per BIS code - determination of density, moisture content - glue shear strength, knife test, tensile strength, compressive strength, impact strength bending strength, nail and screw holding power, determination of fire resistance, mycological test, acidity and alkalinity Speciality plywoods, Tea chest plywood, marine plywood, shuttering plywood, fire proof plywood, air craft plywood,

preservative treated plywood, metal faced plywood, moulded Plywood. using standard technical terminology.

- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, outline grading of plywood 5 understanding grading of plywoods physical properties - density, moisture - content, hygroscopic properties, absorption, swelling and shrinkage mechanical properties - elasticity, rigidity tensile strength, bending thermal conductivity and acoustical properties testing of plywood as per bis code - determination of density, moisture content - glue shear strength, knife test, tensile strength, compressive strength, impact strength bending strength, nail and screw holding power, determination of fire resistance, mycological test, acidity and alkalinity speciality plywoods, tea chest plywood, marine plywood, shuttering plywood, fire proof plywood, air craft plywood, preservative treated plywood, metal faced plywood, moulded plywood. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Outline Grading of Plywood 5 Understanding Grading of Plywoods Physical properties - density, moisture - content, hygroscopic properties, absorption, swelling and shrinkage Mechanical properties - elasticity, rigidity tensile strength, bending Thermal conductivity and acoustical properties Testing of plywood as per BIS code - determination of density, moisture content - glue shear strength, knife test, tensile strength, compressive strength, impact strength bending strength, nail and screw holding power, determination of fire resistance, mycological test, acidity and alkalinity Speciality plywoods, Tea chest plywood, marine plywood, shuttering plywood, fire proof plywood, air craft plywood, preservative treated plywood, metal faced plywood, moulded Plywood. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Official syllabus detail and terminology

The following excerpt preserves official syllabus terminology for this module. Educational explanations below are separate elaboration.

Interpret grading of plywood, testing and properties

M3.01 Illustrate Pressing and Pre-Pressing
Applying 5

M3.02 Explain Dimensioning of Plywood
Understanding 5

M3.03 Outline Grading of Plywood
Understanding 5

Contents:

Grading of Plywoods

Physical properties - density, moisture - content, hygroscopic properties, absorption,

swelling and shrinkage Mechanical properties - elasticity, rigidity tensile strength, bending

Thermal conductivity and acoustical properties Testing of plywood as per BIS code -

determination of density, moisture content - glue shear strength, knife test, tensile strength,

compressive strength, impact strength bending strength, nail and screw holding power,

determination of fire resistance, mycological test, acidity and alkalinity

Speciality

plywoods, Tea chest plywood, marine plywood, shuttering plywood, fire proof plywood, air

craft plywood, preservative treated plywood, metal faced plywood, moulded

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 4

Compare solid wood bending and laminated wood bending process

This module is presented from the official syllabus scope for Wood Products I. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Compare solid wood bending and laminated wood bending process
- Official duration: As specified
- Official topic entries captured: 3
- The full source excerpt is preserved below for coverage checking.

Recall Wood Bending

Recall Wood Bending is an official topic in Module 4 of Wood Products I. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Recall Wood Bending using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, recall wood bending should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Recall Wood Bending means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4-ഓർമ്മ വൃത്തിയെടുക്കൽ Wood Bending ഓർമ്മ വൃത്തിയെടുക്കൽ definition/meaning ഓർമ്മ വൃത്തിയെടുക്കൽ. ഓർമ്മ വൃത്തിയെടുക്കൽ steps, application ഓർമ്മ വൃത്തിയെടുക്കൽ ഓർമ്മ വൃത്തിയെടുക്കൽ. Technical terms English-ഓർമ്മ വൃത്തിയെടുക്കൽ.

Explain Solid Wood Bending

Explain Solid Wood Bending is an official topic in Module 4 of Wood Products I. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Explain Solid Wood Bending using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, explain solid wood bending should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

OFFICIAL SELF-LEARNING

Activities from the syllabus

Use the extracted official activity wording as the record of required self-learning work.

The official PDF does not expose a separate activities heading in the extracted text; consult the source PDF pages for the exact activity list.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

Define or explain 1 Remembering manufacturing Explain Processing of Logs Prior to. (3 marks)

Answer: Begin with the standard definition or identity of *1 Remembering manufacturing Explain Processing of Logs Prior to*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: ഏകദേശം definition, തത്വം principle/steps, പ്രയോഗം application എന്നിവ ഉൾക്കൊള്ളിക്കണം.

Define or explain 5 Understanding Veneering. (3 marks)

Answer: Begin with the standard definition or identity of *5 Understanding Veneering*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: ഏകദേശം definition, തത്വം principle/steps, പ്രയോഗം application എന്നിവ ഉൾക്കൊള്ളിക്കണം.

Define or explain Illustrate rotary cutting and Splicing of veneer. (3 marks)

Answer: Begin with the standard definition or identity of *Illustrate rotary cutting and Splicing of veneer*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: ഏകദേശം definition, തത്വം principle/steps, പ്രയോഗം application എന്നിവ ഉൾക്കൊള്ളിക്കണം.

Define or explain Outline Drying and Splicing of Veneer 5 Applying Plywood, veneer, flitches, peeling, slicing and drying - advantage of plywood over solid wood - history of plywood manufacture - factors considering in the selection of logs and its storage and transport - end coating and end protection devices - softening treatment of logs prior to boiling and slicing - flitches and their preparation - tangential and radial cutting - veneer slicing and methods - vertical slicing machine - rotary peeling - nose bar, knife arrangement on peeling lathe - Illustrate schematic diagram of log with respect to knife and nose bar - handling of veneers and clipping - advantage of veneer drying - Jet dryer, roller dryer, band dryer, breather and Kiln dryer - processing of veneers - storage and handling of veneers from peeling - joining and splicing machine- cross feed splicer. (3 marks)

Answer: Begin with the standard definition or identity of *Outline Drying and Splicing of Veneer* 5 Applying Plywood, veneer, flitches, peeling, slicing and drying - advantage of plywood over solid wood - history of plywood manufacture - factors considering in the selection of logs and its storage and transport - end coating and end protection devices - softening treatment of logs prior to boiling and slicing - flitches and their preparation - tangential and radial cutting - veneer slicing and methods - vertical slicing machine - rotary peeling - nose bar, knife arrangement on peeling lathe - Illustrate schematic diagram of log with respect to knife and nose bar - handling of veneers and clipping - advantage of veneer drying - Jet dryer, roller dryer, band dryer, breather and Kiln dryer - processing of veneers - storage and handling of veneers from peeling - joining and splicing machine- cross feed splicer. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Module 2

Define or explain Illustrate repairing of Veneer. (3 marks)

Answer: Begin with the standard definition or identity of *Illustrate repairing of Veneer*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Illustrate Veneer matching. (3 marks)

Answer: Begin with the standard definition or identity of *Illustrate Veneer matching*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps,

□□□□□ application □□□□ □□□□□□□□ □□□□□.

Define or explain Explain gluing of veneer. (3 marks)

Answer: Begin with the standard definition or identity of *Explain gluing of veneer*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□ principle/steps, □□□□□ application □□□□ □□□□□□□□ □□□□□.

Define or explain Outline assembling of veneer 4 Understanding Repair of veneers - picus joint, scarf joint, lbus joint - veneer matching - four piece matching, book matching side to side matching, end to end matching cathedral matching - adhesive, adhesion, adherent - glues - glue mixing - roller spreading with diagram, brushing, spraying - adhesive, adhesion, adherent - glues - glue mixing - roller spreading with diagram, brushing, spraying - pre pressing and its advantages - cold press - hot press - gauge pressure - conditioning - hot press gluing faults such as blister, bleed through, warp age, starved joint, spotty bond, weak bond face checking, overlaps and core gaps - dimensioning and sanding of plywood - trimming - standard plywood specifications - drum sander, belt sander, wide belt sander - abrasive materials. (3 marks)

Answer: Begin with the standard definition or identity of *Outline assembling of veneer 4 Understanding Repair of veneers - picus joint, scarf joint, lbus joint - veneer matching - four piece matching, book matching side to side matching, end to end matching cathedral matching - adhesive, adhesion, adherent - glues - glue mixing - roller spreading with diagram, brushing, spraying - adhesive, adhesion, adherent - glues - glue mixing - roller spreading with diagram, brushing, spraying - pre pressing and its advantages - cold press - hot press - gauge pressure - conditioning - hot press gluing faults such as blister, bleed through, warp age, starved joint, spotty bond, weak bond face checking, overlaps and core gaps - dimensioning and sanding of plywood - trimming - standard plywood specifications - drum sander, belt sander, wide belt sander - abrasive materials*. Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **1 Remembering manufacturing Explain Processing of Logs Prior to**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **Illustrate repairing of Veneer**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **Illustrate Pressing and Pre-Pressing**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 4

1-mark definition: State the meaning of **Recall Wood Bending**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
