

Course 6342B

6 Credits: 4

Open Elective

Source-grounded

Fundamentals of Soft Computing

□ To become familiar with neural networks and understand its features and applications.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTR syllabus PDF for Course 6342B is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 6342B.pdf from the uploaded official SITTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Artificial Intelligence & Machine Learning
Course code	6342B
Course title	Fundamentals of Soft Computing
Semester	6 Credits: 4
Course category	Open Elective

Item	Official information
Periods per week	4 (L:4 T:0 P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

18 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD

How to use this lesson

First pass

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- □ To become familiar with neural networks and understand its features and applications.
- □ To get exposed to the mathematical background for solving problems using neural
- □ network learning algorithms.
- □ To get exposed to the ideas of fuzzy logic and also provide knowledge about the use
- of inference systems and approximate reasoning in solving complex tasks.
- □ To familiarize with genetic algorithms useful for solving complex optimization.

Course outcomes

CO	Official outcome	Study level
CO1	7 Understanding computing Explain the concepts of Artificial Neural Network	See official syllabus
CO2	18 Understanding	See official syllabus
CO3	Demonstrate the concepts of fuzzy sets 18 Understanding	See official syllabus
CO4	Concepts of genetic algorithms 14 Understanding	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3
CO2	CO2 3
CO3	CO3 3

Row	Extracted official mapping
CO4	CO4 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Summarize fundamental concepts of soft computing	4	As specified
Module 2	Outline concepts of Artificial Neural Network (ANN)	4	As specified
Module 3	Demonstrate fuzzy logic and sets	4	As specified
Module 4	Understand concepts of Genetic Algorithms	6	As specified

MODULE 1

Summarize fundamental concepts of soft computing

This module is presented from the official syllabus scope for Fundamentals of Soft Computing. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.

- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Summarize fundamental concepts of soft computing
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

Understand the concept of soft computing. 2 Understanding Differentiate "Soft" computing and "Hard"

Understand the concept of soft computing. 2 Understanding Differentiate "Soft" computing and "Hard" is an official topic in Module 1 of Fundamentals of Soft Computing. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Understand the concept of soft computing. 2 Understanding Differentiate "Soft" computing and "Hard" using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, understand the concept of soft computing. 2 understanding differentiate "soft" computing and "hard" should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Understand the concept of soft computing. 2 Understanding Differentiate "Soft" computing and "Hard" means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- Understand the concept of soft computing. 2 Understanding Differentiate "Soft" computing and "Hard" computing. definition/meaning. Advantages and Disadvantages, steps, application. Technical terms English-Malayalam.

1 Understanding computing Discuss conventional AI to Computational

1 Understanding computing Discuss conventional AI to Computational is an official topic in Module 1 of Fundamentals of Soft Computing. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 1 Understanding computing Discuss conventional AI to Computational using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 1 understanding computing discuss conventional ai to computational should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 1 Understanding computing Discuss conventional AI to Computational means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related

but different term.

Malayalam support: Module 1- 1 Understanding computing Discuss conventional AI to Computational **പ്രശ്നം** definition/meaning **പ്രശ്നം**. **പ്രശ്നം** **പ്രശ്നം** **പ്രശ്നം**, steps, application **പ്രശ്നം** **പ്രശ്നം** **പ്രശ്നം**. Technical terms English- **പ്രശ്നം** **പ്രശ്നം**.

2 Understanding Intelligence.

2 Understanding Intelligence. is an official topic in Module 1 of Fundamentals of Soft Computing. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding Intelligence. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding intelligence. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 2 Understanding Intelligence. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- 2 Understanding Intelligence.
 definition/meaning
 application
 Technical terms English-

Applications of Soft computing techniques 2 Understanding Characteristics of Soft Computing. Differentiate Soft Computing and Hard Computing, Conventional AI, Computational Intelligence, Applications of Soft computing.

Applications of Soft computing techniques 2 Understanding Characteristics of Soft Computing. Differentiate Soft Computing and Hard Computing, Conventional AI, Computational Intelligence, Applications of Soft computing. is an official topic in Module 1 of Fundamentals of Soft Computing. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Applications of Soft computing techniques 2 Understanding Characteristics of Soft Computing. Differentiate Soft Computing and Hard Computing, Conventional AI, Computational Intelligence, Applications of Soft computing. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, applications of soft computing techniques 2 understanding characteristics of soft computing. differentiate soft computing and hard computing, conventional ai, computational intelligence, applications of soft computing. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Understand concepts of Genetic Algorithms
- Official duration: As specified
- Official topic entries captured: 6
- The full source excerpt is preserved below for coverage checking.

Define Genetic algorithm

Define Genetic algorithm is an official topic in Module 4 of Fundamentals of Soft Computing. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Define Genetic algorithm using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, define genetic algorithm should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Define Genetic algorithm means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4- Define Genetic algorithm definition/meaning . steps, application . Technical terms English-

Understand Biological terminologies 2 Understanding Understand basic terminologies and working

Understand Biological terminologies 2 Understanding Understand basic terminologies and working is an official topic in Module 4 of Fundamentals of Soft Computing. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Understand Biological terminologies 2 Understanding Understand basic terminologies and working using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, understand biological terminologies 2 understanding understand basic terminologies and working should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Understand Biological terminologies 2 Understanding Understand basic terminologies and working means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

3 Understanding of genetic algorithms..

3 Understanding of genetic algorithms.. is an official topic in Module 4 of Fundamentals of Soft Computing. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding of genetic algorithms.. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding of genetic algorithms.. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Understanding of genetic algorithms.. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

steps, application എങ്ങനെ ഉപയോഗിക്കാം. Technical terms English-ൽ എങ്ങനെ
എഴുതണം.

Explain the Simple Genetic algorithm

Explain the Simple Genetic algorithm is an official topic in Module 4 of Fundamentals of Soft Computing. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Explain the Simple Genetic algorithm using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, explain the simple genetic algorithm should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

OFFICIAL SELF-LEARNING

Activities from the syllabus

Use the extracted official activity wording as the record of required self-learning work.

The official PDF does not expose a separate activities heading in the extracted text; consult the source PDF pages for the exact activity list.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

Define or explain Understand the concept of soft computing. 2 Understanding Differentiate "Soft" computing and "Hard". (3 marks)

Answer: Begin with the standard definition or identity of *Understand the concept of soft computing. 2 Understanding Differentiate "Soft" computing and "Hard"*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 1 Understanding computing Discuss conventional AI to Computational. (3 marks)

Answer: Begin with the standard definition or identity of *1 Understanding computing Discuss conventional AI to Computational*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 2 Understanding Intelligence.. (3 marks)

Answer: Begin with the standard definition or identity of *2 Understanding Intelligence..*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Applications of Soft computing techniques 2 Understanding Characteristics of Soft Computing. Differentiate Soft Computing and Hard Computing, Conventional AI, Computational Intelligence, Applications of Soft computing.. (3 marks)

Answer: Begin with the standard definition or identity of *Applications of Soft computing techniques 2 Understanding Characteristics of Soft Computing. Differentiate Soft Computing and Hard Computing, Conventional AI, Computational Intelligence, Applications of Soft computing..*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Module 2

Define or explain Understand Artificial Neural Networks.. (3 marks)

Answer: Begin with the standard definition or identity of *Understand Artificial Neural Networks..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Outline the basic models of ANN.. (3 marks)

Answer: Begin with the standard definition or identity of *Outline the basic models of ANN..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Summarize important terminologies of ANN 6 Understanding Understand basic networks in Supervised. (3 marks)

Answer: Begin with the standard definition or identity of *Summarize important terminologies of ANN 6 Understanding Understand basic networks in Supervised.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 4 Understanding Learning Basic Models of ANN -connections- learning- activation functions (identity, binary step, bipolar step, sigmoidal, ramp). Important terminologies of ANN - weights, bias, threshold, learning rate, momentum factor, vigilance parameter, notations-McCulloch-Pitts Neuron Overview of Supervised learning network- Perceptron Network- Adaline - Madaline. (3 marks)

Answer: Begin with the standard definition or identity of 4 *Understanding Learning Basic Models of ANN -connections- learning- activation functions (identity, binary step, bipolar step, sigmoidal, ramp)*. Important terminologies of ANN – weights, bias, threshold, learning rate, momentum factor, vigilance parameter, notations-McCulloch-Pitts Neuron Overview of Supervised learning network- Perceptron Network- Adaline - Madaline. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Module 3

Define or explain Familiarise fuzzy sets. (3 marks)

Answer: Begin with the standard definition or identity of *Familiarise fuzzy sets*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Illustrate fuzzy Operations and Properties 5 Understanding Summarize Fuzzy Relations and Membership. (3 marks)

Answer: Begin with the standard definition or identity of *Illustrate fuzzy Operations and Properties 5 Understanding Summarize Fuzzy Relations and Membership*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 6 Understanding functions. (3 marks)

Answer: Begin with the standard definition or identity of *6 Understanding functions*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Understand Fuzzy Rules and Fuzzy logic 4 Understanding Fuzzy Sets: Operations and Properties, Fuzzy Relations-Cardinality, operations on fuzzy relations. Membership functions- Features of the membership functions Fuzzy Rules and Fuzzy Reasoning Fuzzy Inference Systems, Fuzzy Logic.. (3 marks)

Answer: Begin with the standard definition or identity of *Understand Fuzzy Rules and Fuzzy logic 4 Understanding Fuzzy Sets: Operations and Properties, Fuzzy Relations-Cardinality, operations on fuzzy relations. Membership functions- Features of the membership functions Fuzzy Rules and Fuzzy Reasoning Fuzzy Inference Systems, Fuzzy Logic..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Define Genetic algorithm. (3 marks)

Answer: Begin with the standard definition or identity of *Define Genetic algorithm*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Understand Biological terminologies 2 Understanding Understand basic terminologies and working. (3 marks)

Answer: Begin with the standard definition or identity of *Understand Biological terminologies 2 Understanding Understand basic terminologies and working*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 3 Understanding of genetic algorithms... (3 marks)

Answer: Begin with the standard definition or identity of *3 Understanding of genetic algorithms...* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Explain the Simple Genetic algorithm. (3 marks)

Answer: Begin with the standard definition or identity of *Explain the Simple Genetic algorithm*. State the governing principle, list the key components or stages, and close

with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□ □□□□□□.

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **Understand the concept of soft computing.**
2 Understanding Differentiate "Soft" computing and "Hard".

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **Understand Artificial Neural Networks..**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **Familiarise fuzzy sets.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 4

1-mark definition: State the meaning of **Define Genetic algorithm**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
