

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 3111

3 Credits: 4

Program Core

Source-grounded

Moulds & Dies Technology

□ To provide a thorough knowledge on plastic materials, their properties and processing methods in moulding industry

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTR syllabus PDF for Course 3111 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 3111.pdf from the uploaded official SITTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Tool and Die Engineering
Course code	3111
Course title	Moulds & Dies Technology
Semester	3 Credits: 4
Course category	Program Core
Periods per week	4 (L:3, T:1, P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

16 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- To provide a thorough knowledge on plastic materials, their properties and processing methods in moulding industry
- To introduce different plastic processing techniques used in industry
- To give a basic information on the product design concept

Course outcomes

CO	Official outcome	Study level
CO1	15 Understanding processing methods in moulding industry	See official syllabus
CO2	Apply feed and cooling system in mould 15 Applying Explain the methods of plastic moulding other than	See official syllabus
CO3	14 Understanding injection moulding Recognize process description of die casting and	See official syllabus
CO4	14 Understanding the concept of product design	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 2
CO2	CO2 3 2
CO3	CO3 2 1
CO4	CO4 2 1

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	industry	4	As specified
Module 2	Apply feed and cooling systems in mould	4	As specified
Module 3	process	4	As specified
Module 4	product design	4	As specified

MODULE 1

industry

This module is presented from the official syllabus scope for Moulds & Dies Technology. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: industry
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ Classify plastic materials and their properties 3 Understanding Differentiate between thermo and

Classify plastic materials and their properties 3 Understanding
Differentiate between thermo and is an official topic in Module 1 of Moulds & Dies Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Classify plastic materials and their properties 3 Understanding Differentiate between thermo and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, classify plastic materials and their properties 3 understanding differentiate between thermo and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Classify plastic materials and their properties 3 Understanding Differentiate between thermo and means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- Classify plastic materials and their properties 3 Understanding Differentiate between thermo and definition/meaning . steps, application . Technical terms English- .

▼ 4 Understanding thermosetting plastics Explain various moulding processes used in

4 Understanding thermosetting plastics Explain various moulding processes used in is an official topic in Module 1 of Moulds & Dies Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding thermosetting plastics Explain various moulding processes used in using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding thermosetting plastics explain various moulding processes used in should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 2

Apply feed and cooling systems in mould

This module is presented from the official syllabus scope for Moulds & Dies Technology. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Apply feed and cooling systems in mould
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ Terminology used in mould making

Terminology used in mould making is an official topic in Module 2 of Moulds & Dies Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Terminology used in mould making using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, terminology used in mould making should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Terminology used in mould making means in the official course context

▼ Apply Feed system of mould

Apply Feed system of mould is an official topic in Module 2 of Moulds & Dies Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Apply Feed system of mould using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, apply feed system of mould should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Apply Feed system of mould means in the official course context
Study lens	Principle → components or stages → result → application

Aspect	What to prepare
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- 4 Understanding forming Compression moulding - application - temperature and pressure ranges - basic types of compression moulds - flash type mould - positive mould - landed positive mould - semi positive mould. Transfer moulding - application - advantages and limitations - types of transfer mould - pot type and plunger type Extrusion moulding - description of the process - application. Blow moulding - Description of the process - application. Rotational moulding - description of the process - application. calendaring - vacuum forming -filament winding - multicolor moulding Recognize process description of die casting and introduce the concept of definition/meaning . steps, application . Technical terms English- .

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 4

product design

This module is presented from the official syllabus scope for Moulds & Dies Technology. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: product design
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ Explain die casting process 4 Understanding Classify Die casting machines - hot chamber

Explain die casting process 4 Understanding Classify Die casting machines - hot chamber is an official topic in Module 4 of Moulds & Dies Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Explain die casting process 4 Understanding Classify Die casting machines - hot chamber using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, explain die casting process 4 understanding classify die casting machines - hot chamber should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What Explain die casting process 4 Understanding Classify Die casting machines - hot chamber means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4- Explain die casting process 4 Understanding Classify Die casting machines - hot chamber definition/meaning steps, application Technical terms English-

▼ 4 Understanding and cold chamber

4 Understanding and cold chamber is an official topic in Module 4 of Moulds & Dies Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding and cold chamber using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding and cold chamber should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain Classify plastic materials and their properties 3 Understanding Differentiate between thermo and. (3 marks)**

► **Define or explain 4 Understanding thermosetting plastics Explain various moulding processes used in. (3 marks)**

► **Define or explain 4 Understanding Industry Describe working principle of injection. (3 marks)**

► **Define or explain 4 Understanding moulding machine Plastics in the mould industry - Definition of plastics - properties of plastics - application. - types Thermo setting plastics - Thermo plastics - Examples - properties and uses of Nylon (Polyamide),PVC, PMMA, Acrylic, Polycarbonate, FRP, Polyoxymethylene (POM), Polystyrene (PS), ABS, Polypropylene (PP),Polyethylene (PE) Plastic processes: Injection moulding, Compression moulding, Transfer moulding; Extruding; Casting; Calendaring; Fabrication methods-Sheet forming, Blow moulding, Laminating plastics (sheets, rods & tubes) Injection moulding- working-principle-advantages and disadvantages. (3 marks)**

Module 2

► **Define or explain Terminology used in mould making. (3 marks)**

► **Define or explain Apply Feed system of mould. (3 marks)**

► **Define or explain Explain Ejection techniques 4 Understanding Apply cooling system and classification of. (3 marks)**

► **Define or explain 4 Applying mould Definition of mould -Terminology - mould materials Feed system - Runner - types of runner - Runner diameter calculation - Gate - types of gates - Gate calculation Ejection Techniques - Parting surface - venting - shrinkage - values of shrinkage - Factors governing shrinkage Temperature control - cooling - mould cooling (simple numerical problem) Side core and side cavity - Determine core and cavity dimensions - Internal undercuts - Two plate and three plate moulds - runner less moulds - multi daylight moulds - mould maintenance. Explain plastic processing techniques other than injection moulding. (3 marks)**

Module 3

► **Define or explain 2 Understanding moulding Explain process of extrusion and blow. (3 marks)**

► **Define or explain 4 Understanding moulding. (3 marks)**

► **Define or explain Describe the process of rotational moulding 4 Understanding Describe the process of calendaring, vacuum. (3 marks)**

► **Define or explain 4 Understanding forming Compression moulding - application - temperature and pressure ranges - basic types of compression moulds - flash type mould - positive mould - landed positive mould - semi positive mould. Transfer moulding - application - advantages and limitations - types of transfer mould - pot type and plunger type Extrusion moulding - description of the process - application. Blow moulding - Description of the process - application. Rotational moulding - description of the process - application.**

calendaring - vacuum forming -filament winding - multicolor moulding
Recognize process description of die casting and introduce the concept of. (3 marks)

Module 4

► **Define or explain Explain die casting process 4 Understanding Classify Die casting machines - hot chamber. (3 marks)**

► **Define or explain 4 Understanding and cold chamber. (3 marks)**

► **Define or explain List Die casting alloys. (3 marks)**

► **Define or explain Explain the basic concept of Product design 4 Understanding Die casting - advantages of die casting techniques - principle advantages and limitations of pressure die casting process - die casting terminology - die casting alloys - zinc, aluminum, magnesium, copper etc. - composition - properties of different die casting alloys - die casting machines - hot chamber and cold chamber - comparison of hot chamber and cold chamber process - die casting dies Product design - introduction - steps involved in product design - characteristics of product development - challenges of product development - phases involved in product development - steps involved in product planning process Text/ Reference: T/R Book Title/Author T1 Introduction to injection moulding - Pye T2 The Mould Design Guide - Peter Jones R1 Fundamentals of plastics mould design - Sanjay K Nayak - Tata Mac Graw Product design and development-Karl T. Ulrich ,Steven D. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **Classify plastic materials and their properties** 3 Understanding **Differentiate between thermo and.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **Terminology used in mould making.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **2 Understanding moulding Explain process of extrusion and blow.**

Module 4

1-mark definition: State the meaning of **Explain die casting process 4 Understanding Classify Die casting machines - hot chamber.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
