

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 3188

3 Credits: 1.5

Program Core

Source-grounded

Masonry and Services Lab

This course is designed to:

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 3188 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 3188.pdf from the uploaded official SITTTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Architecture
Course code	3188
Course title	Masonry and Services Lab
Semester	3 Credits: 1.5
Course category	Program Core
Periods per week	3 (L:0 T:0 P:3) Periods per semester: 45
Periods per semester	45
Credits	1.5
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

15 source-aligned topic entries retained.

Study mode

Practical/laboratory emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- This course is designed to:
- ☐ Identify the quality of construction materials, and understand their relevant characteristics
- ☐ Identify the suitability of various materials for different construction process.
- ☐ Set out a building at field from building plan
- ☐ Supervise construction of brick wall, electrical and plumbing works in buildings.

Course outcomes

CO	Official outcome	Study level
CO1	building materials related to construction activities 12 Applying and identify the design mix of concrete.	See official syllabus
CO2	Set out the building at site from given building plan 5 Applying	See official syllabus
CO3	Supervise construction of brick wall. 12 Applying Supervise electrical and plumbing works in a	See official syllabus
CO4	10 Applying building.	See official syllabus

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Interpret the strength of different building materials related to	7	As specified
Module 2	Set out the building at site from given building plan	2	As specified
Module 3	Supervise construction of brick wall.	3	As specified
Module 4	Supervise electrical and plumbing works in a building.	3	As specified

MODULE 1

Interpret the strength of different building materials related to

This module is presented from the official syllabus scope for Masonry and Services Lab. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Interpret the strength of different building materials related to
- Official duration: As specified
- Official topic entries captured: 7
- The full source excerpt is preserved below for coverage checking.

▼ Determine the fineness of cement

Determine the fineness of cement is an official topic in Module 1 of Masonry and Services Lab. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Determine the fineness of cement using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, determine the fineness of cement should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Determine the fineness of cement means in the official course context

Aspect	What to prepare
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-
 Determine the fineness of cement
 definition/meaning.
 steps, application
 Technical terms

Malayalam support: Module 1- 2 Applying find the stress at first crack and ultimate stress Conduct tension test on mild steel rod and find yield point stress, breaking stress, definition/meaning. steps, application. Technical terms English- Malayalam.

▼ ultimate stress, percentage of elongation and 2 Applying percentage of reduction in constructional area of MS bar Determine fineness modulus on fine and

ultimate stress, percentage of elongation and 2 Applying percentage of reduction in constructional area of MS bar Determine fineness modulus on fine and is an official topic in Module 1 of Masonry and Services Lab. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify ultimate stress, percentage of elongation and 2 Applying percentage of reduction in constructional area of MS bar Determine fineness modulus on fine and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, ultimate stress, percentage of elongation and 2 applying percentage of reduction in constructional area of ms bar determine fineness modulus on fine and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What ultimate stress, percentage of elongation and 2 Applying percentage of reduction in constructional area of MS bar Determine fineness modulus on fine and means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- ultimate stress, percentage of elongation and 2 Applying percentage of reduction in constructional area of MS bar Determine fineness modulus on fine and definition/meaning . steps, application . Technical terms English- .

▼ 1 Applying coarse aggregate

1 Applying coarse aggregate is an official topic in Module 1 of Masonry and Services Lab. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 1 Applying coarse aggregate using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 1 applying coarse aggregate should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 1 Applying coarse aggregate means in the official course context
Study lens	Principle → components or stages → result → application

Aspect	What to prepare
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

▼ 3 Applying bath room shower

3 Applying bath room shower is an official topic in Module 4 of Masonry and Services Lab. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Applying bath room shower using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 applying bath room shower should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Applying bath room shower means in the official course context
Study lens	Principle → components or stages → result → application

Aspect	What to prepare
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► Define or explain Determine the fineness of cement. (3 marks)

► Define or explain Determine the standard consistency 1 Determine the initial and final setting time of. (3 marks)

► Define or explain 2 Applying cement Determine the workability of concrete (slump. (3 marks)

► Define or explain 2 Applying test and compaction factor test) Conduct the compression test on brick and. (3 marks)

Module 2

► Define or explain Conduct setting out of a building on site 3 Applying Identify various layers and types of soil in foundation pit by visiting at least 3. (3 marks)

► Define or explain construction sites in different locations of city 2 Applying and prepare report consisting photographs and samples.. (3 marks)

Module 3

► Define or explain 3 Applying bond Construct one and half brick thick wall in. (3 marks)

► Define or explain 3 Applying English bond Construct one brick thick wall in Flemish. (3 marks)

► Define or explain 3 Applying Flemish bond. (3 marks)

Module 4

► Define or explain Applying a two-way switch in a circuit to operate lamp. Install plumbing work for single tap and. (3 marks)

► Define or explain 3 Applying bath room shower. (3 marks)

► Define or explain Install plumbing work for water closet 3 Applying

#. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **Determine the fineness of cement**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **Conduct setting out of a building on site** 3 Applying Identify various layers and types of soil in foundation pit by visiting at least 3.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **3 Applying bond Construct one and half brick thick wall in**.

Module 4

1-mark definition: State the meaning of **Applying a two-way switch in a circuit to operate lamp. Install**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

plumbing work for single tap and.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
