

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 3301

3 Credits: 3

Program Core

Source-grounded

Problem Solving Using Python

- To learn and understand the basics of Python programming.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 3301 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 3301.pdf from the uploaded official SITTTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Robotic Process Automation
Course code	3301
Course title	Problem Solving Using Python
Semester	3 Credits: 3
Course category	Program Core
Periods per week	3 (L: 3 T: 0 P: 0) Periods per semester: 45
Periods per semester	45
Credits	3
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

27 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- To learn and understand the basics of Python programming.
- Develop different programming applications using Python.
- To learn the concept of file handling and exception handling.

Course outcomes

CO	Official outcome	Study level
CO1	construct Python programs using control statements 11 Applying and expressions. Develop programs using functions and slicing	See official syllabus
CO2	14 Applying operation. Use Python data structures - List, Tuple, and	See official syllabus
CO3	9 Applying Dictionary - for solving problems. Explain files, exceptions, and modules in Python for	See official syllabus
CO4	9 Applying solving problems	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3 3 3
CO2	CO2 3 3 3
CO3	CO3 3 3 3
CO4	CO4 3 3 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	programs using control statements and expressions.	5	As specified
Module 2	: Develop programs using functions and slicing operation.	7	As specified
Module 3	:	9	As specified
Module 4	: Explain files, exceptions, and modules in Python for solving problems	6	As specified

MODULE 1

programs using control statements and expressions.

This module is presented from the official syllabus scope for Problem Solving Using Python. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: programs using control statements and expressions.
- Official duration: As specified
- Official topic entries captured: 5
- The full source excerpt is preserved below for coverage checking.

▼ 1 Understanding. algorithm, flow chart, and pseudo code. Illustrate the basic concept of a Python- identifiers,

1 Understanding. algorithm, flow chart, and pseudo code. Illustrate the basic concept of a Python- identifiers, is an official topic in Module 1 of Problem Solving Using Python. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 1 Understanding. algorithm, flow chart, and pseudo code. Illustrate the basic concept of a Python- identifiers, using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 1 understanding. algorithm, flow chart, and pseudo code. illustrate the basic concept of a python- identifiers, should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 1 Understanding. algorithm, flow chart, and pseudo code. Illustrate the basic concept of a Python- identifiers, means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- 1 Understanding. algorithm, flow chart, and pseudo code. Illustrate the basic concept of a Python- identifiers, definition/meaning. , steps, application . Technical terms English- .

▼ 2 Understanding keywords, variables and data types. Explain operators and expressions- Expressions, Arithmetic, comparison, assignment, logical, bitwise,

2 Understanding keywords, variables and data types. Explain operators and expressions- Expressions, Arithmetic, comparison, assignment, logical, bitwise, is an official topic in Module 1 of Problem Solving Using Python. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding keywords, variables and data types. Explain operators and expressions- Expressions, Arithmetic, comparison, assignment, logical, bitwise, using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding keywords, variables and data types. explain operators and expressions- expressions, arithmetic, comparison, assignment, logical, bitwise, should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 2 Understanding keywords, variables and data types. Explain operators and expressions- Expressions, Arithmetic, comparison, assignment, logical, bitwise, means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-2 Understanding keywords, variables and data types. Explain operators and expressions- Expressions, Arithmetic, comparison, assignment, logical, bitwise,
 definition/meaning
 .
 , steps, application
 . Technical terms English-
 .

▼ 3 Understanding membership and identity operators, precedence of operators, associativity and input output functions. Explain Control statements- if elif else statement,

3 Understanding membership and identity operators, precedence of operators, associativity and input output functions. Explain Control statements- if elif else statement, is an official topic in Module 1 of Problem Solving Using Python. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding membership and identity operators, precedence of operators, associativity and input output functions. Explain Control statements- if elif else statement, using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding membership and identity operators, precedence of operators, associativity and input output functions. explain control statements- if elif else statement, should be discussed with attention to safe

operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Understanding membership and identity operators, precedence of operators, associativity and input output functions. Explain Control statements- if elif else statement, means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-3 Understanding membership and identity operators, precedence of operators, associativity and input output functions. Explain Control statements- if elif else statement, definition/meaning. Explain the steps, application of the concept. Technical terms English- Malayalam.

▼ while statement, for statement, break and continue 3 Understanding statements.

while statement, for statement, break and continue 3 Understanding statements. is an official topic in Module 1 of Problem Solving Using Python. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify while statement, for statement, break and continue 3 Understanding statements. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, while statement, for statement, break and continue 3 understanding statements. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

User defined functions: - Function definition, function calling, function returning values. Arguments and parameters, required arguments, default arguments, keyword arguments. Recursive functions. Scope of variables-local and global scope. Programming examples. Strings: - Indexing, string operations- concatenation, repetition, membership and slicing. Built-in- functions. Programming examples. Use Python data structures - List, Tuple, and Dictionary - for solving definition/meaning, steps, application, Technical terms English- Malayalam.

► Official syllabus detail and terminology (expand in digital version)

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 3

This module is presented from the official syllabus scope for Problem Solving Using Python. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 3 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: :
- Official duration: As specified
- Official topic entries captured: 9
- The full source excerpt is preserved below for coverage checking.

▼ List and operations- concatenation, repetition, and in 1 Understanding operator Illustrate the concept of traversing a list and built-in-

List and operations- concatenation, repetition, and in 1 Understanding operator Illustrate the concept of traversing a list and built-in- is an official topic in Module 3 of Problem Solving Using Python. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify List and operations- concatenation, repetition, and in 1 Understanding operator Illustrate the concept of traversing a list and built-in- using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, list and operations- concatenation, repetition, and in 1 understanding operator illustrate the concept of traversing a list and built-in- should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What List and operations- concatenation, repetition, and in 1 Understanding operator Illustrate the concept of traversing a list and built-in- means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- List and operations- concatenation, repetition, and in 1 Understanding operator Illustrate the concept of traversing a list and built-in- definition/meaning . steps, application . Technical terms English- .

▼ 1 Understanding List methods-len(), append(), insert() etc.

1 Understanding List methods-len(), append(), insert() etc. is an official topic in Module 3 of Problem Solving Using Python. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 1 Understanding List methods-len(), append(), insert() etc. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 1 understanding list methods-len(), append(), insert() etc. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 1 Understanding List methods-len(), append(), insert() etc. means in the official course context

Aspect	What to prepare
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3-1 Understanding List methods-len(), append(), insert() etc. പട്ടികയിലെ definition/meaning പട്ടികയിൽ ഉൾപ്പെടുത്തുക. പട്ടികയിൽ പട്ടികയിൽ പട്ടികയിൽ, steps, application പട്ടികയിൽ പട്ടികയിൽ പട്ടികയിൽ. Technical terms English-ൽ പട്ടികയിൽ പട്ടികയിൽ പട്ടികയിൽ.

▼ Develop programs using List 1 Applying Explain the concept of Tuples- creation, accessing

Develop programs using List 1 Applying Explain the concept of Tuples- creation, accessing is an official topic in Module 3 of Problem Solving Using Python. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Develop programs using List 1 Applying Explain the concept of Tuples- creation, accessing using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, develop programs using list 1 applying explain the concept of tuples- creation, accessing should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Module 4 of Problem Solving Using Python. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Develop programs for handling exceptions. 2 Applying Files: - Introduction: - Types of files- Text, binary and CSV files. Opening, closing, reading and writing in a text binary and CSV files. Setting offsets in a file. Pickle module- load() and dump(). Programming examples Exceptions: - Exceptions, built-in-exceptions, handling exceptions – Programming examples. Text / Reference T/R Book Title/Author T1 Balagurusamy E, Introduction to Computing and Problem Solving Using Python. R1 Lambert K.A, Fundamentals of Python-First Programs. Cengage Learning India 2015. R2 Perkovic .L., Introduction to Computing Using Python, 2nd Edition R3 Zelle. J., Python Programming: An Introduction to Computer Science. R4 Allen Downey, Jeffrey Elkner, Chris Meyers., How to think like a computer scientist : learning with Python, 1st Edition Online Resources Sl.No Website Link 1 <https://www.tutorialspoint.com/python/index.htm> 2 <https://www.javatpoint.com/python-tutorial> 3 <https://www.programiz.com/python-programming> 4 <https://www.w3schools.com/python/default.asp> using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, develop programs for handling exceptions. 2 applying files: - introduction: - types of files- text, binary and csv files. opening, closing, reading and writing in a text binary and csv files. setting offsets in a file. pickle module- load() and dump(). programming examples exceptions: - exceptions, built-in-exceptions, handling exceptions – programming examples. text / reference t/r book title/author t1 balagurusamy e, introduction to computing and problem solving using python. r1 lambert k.a, fundamentals of python-first programs. cengage learning india 2015. r2 perkovic .l., introduction to computing using python, 2nd edition r3 zelle. j., python programming: an introduction to computer science. r4 allen downey, jeffrey elkner, chris meyers., how to think like a computer scientist : learning with python, 1st edition online resources sl.no website link 1 <https://www.tutorialspoint.com/python/index.htm> 2 <https://www.javatpoint.com/python-tutorial> 3 <https://www.programiz.com/python-programming> 4 <https://www.w3schools.com/python/default.asp> should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Develop programs for handling exceptions. 2 Applying Files: - Introduction: - Types of files- Text, binary and CSV files. Opening, closing, reading and writing in a text binary and CSV files. Setting offsets in a file. Pickle module- load() and dump(). Programming examples Exceptions: - Exceptions, built-in-exceptions, handling exceptions – Programming examples. Text / Reference T/R Book Title/Author T1 Balagurusamy E, Introduction to Computing and Problem Solving Using Python. R1 Lambert K.A, Fundamentals of Python-First Programs. Cengage Learning India 2015. R2 Perkovic .L., Introduction to Computing Using Python, 2nd Edition R3 Zelle. J., Python Programming: An Introduction to Computer Science. R4 Allen Downey, Jeffrey Elkner, Chris Meyers., How to think like a computer scientist : learning with Python, 1st Edition Online Resources Sl.No Website Link 1 https://www.tutorialspoint.com/python/index.htm 2 https://www.javatpoint.com/python-tutorial 3 https://www.programiz.com/python-programming 4 https://www.w3schools.com/python/default.asp means in the official course context

Aspect	What to prepare
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4- Develop programs for handling exceptions. 2 Applying Files: - Introduction: - Types of files- Text, binary and CSV files. Opening, closing, reading and writing in a text binary and CSV files. Setting offsets in a file. Pickle module- load() and dump(). Programming examples Exceptions: - Exceptions, built-in-exceptions, handling exceptions - Programming examples. Technical terms English- പദപരിചയം പദപരിചയം.

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

RAPID REFERENCE

Concept and formula bank

Answer structure

Definition → Principle →
Components/steps →
Application → Conclusion

Use this sequence for descriptive questions when the topic does not require a numerical formula.

Practical record

Aim → Apparatus → Procedure
→ Observation → Result →
Safety

Use this sequence for laboratory, workshop and field activities.

RAPID REVISION**Diagram and source-transcript library****Module 1 source and topic cards**

Module 3 source and topic cards

Jump to official terminology, topic explanations and study guidance.

Module 4 source and topic cards

Jump to official terminology, topic explanations and study guidance.

OFFICIAL SELF-LEARNING**Activities from the syllabus**

Use the extracted official activity wording as the record of required self-learning work.

The official PDF does not expose a separate activities heading in the extracted text; consult the source PDF pages for the exact activity list.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain 1 Understanding. algorithm, flow chart, and pseudo code. Illustrate the basic concept of a Python- identifiers,. (3 marks)**

► **Define or explain 2 Understanding keywords, variables and data types. Explain operators and expressions- Expressions, Arithmetic, comparison, assignment, logical, bitwise,. (3 marks)**

► **Define or explain 3 Understanding membership and identity operators, precedence of operators, associativity and input output functions. Explain Control statements- if elif else statement,. (3 marks)**

► **Define or explain while statement, for statement, break and continue 3 Understanding statements.. (3 marks)**

Module 2

► **Define or explain built-in-functions, type conversion, type coercion, 2 Understanding. mathematical functions Explain the concept of user defined functions-. (3 marks)**

► **Define or explain function definition, function calling, function 3 Understanding returning values Illustrate the difference between actual and formal. (3 marks)**

► **Define or explain parameters. Types of formal arguments- required, 2 Understanding. default and keyword arguments. Explain the concept of scope of variable-local and. (3 marks)**

► **Define or explain 1 Understanding. global scope and recursive function.. (3 marks)**

Module 3

► **Define or explain List and operations- concatenation, repetition, and in 1 Understanding operator Illustrate the concept of traversing a list and built-in-. (3 marks)**

► **Define or explain 1 Understanding List methods-len(), append(), insert() etc.. (3 marks)**

► **Define or explain Develop programs using List 1 Applying Explain the concept of Tuples- creation, accessing. (3 marks)**

► **Define or explain values in Tuples and operations- concatenation, 1 Understanding repetition, and in operator Summarize built-in-Tuple functions- len(), max(),. (3 marks)**

Module 4

► **Define or explain 2 Understanding such as opening, reading, writing, closing and setting offsets in a file.. (3 marks)**

► **Define or explain Explain the concept of pickle module with examples. (3 marks)**

► **Define or explain Develop programs for performing the operations on 2 Applying files Explain the concept of exceptions and built-in-. (3**

marks)

► **Define or explain 1 Understanding exceptions. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **1 Understanding. algorithm, flow chart, and pseudo code. Illustrate the basic concept of a Python- identifiers,.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **built-in-functions, type conversion, type coercion, 2 Understanding. mathematical functions Explain the concept of user defined functions-.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **List and operations- concatenation, repetition, and in 1 Understanding operator**

Module 4

1-mark definition: State the meaning of **2 Understanding such as opening, reading, writing,**

Illustrate the concept of traversing a list and built-in-.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

closing and setting offsets in a file..

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION**Exam checklist****Before writing**

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
