

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 3462

3 Credits: 3

Program Core

Source-grounded

Fire Engineering

- To understand the fundamentals of fire dynamics, combustion, and fire protection

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTR syllabus PDF for Course 3462 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 3462.pdf from the uploaded official SITTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Fire Technology and Safety
Course code	3462
Course title	Fire Engineering
Semester	3 Credits: 3
Course category	Program Core
Periods per week	3 (L:2 T:1 P:0) Periods per semester: 45
Periods per semester	45
Credits	3
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

16 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES**Objectives, outcomes and mapping****Course objectives**

- To understand the fundamentals of fire dynamics, combustion, and fire protection
- To recognize the classification and applications of various types of fire.
- To analyze the performance of firefighting equipment and systems.
- To understand fire safety protocols and maintenance procedures.

Course outcomes

CO	Official outcome	Study level
CO1	10 Applying systems and combustion. Classify fire types and apply fire protection	See official syllabus
CO2	11 Applying techniques. Select and operate firefighting equipment and	See official syllabus
CO3	12 Applying safety systems for specific scenarios Choose methods for speed control and manage	See official syllabus
CO4	10 Applying fire ground operations effectively.	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3 2 2 2
CO2	CO2 3 2 3 2
CO3	CO3 3 2 3 3
CO4	CO4 3 3 3 2

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Understand fire dynamics and combustion processes.	4	As specified
Module 2	Understand fire growth and heat transfer within enclosures.	4	As specified
Module 3	Gain knowledge in fire service equipment operation and maintenance.	4	As specified
Module 4	operations.	4	As specified

MODULE 1

Understand fire dynamics and combustion processes.

This module is presented from the official syllabus scope for Fire Engineering. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Understand fire dynamics and combustion processes.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ and machines. 3 Understanding Explain the principle of combustion and its

and machines. 3 Understanding Explain the principle of combustion and its is an official topic in Module 1 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify and machines. 3 Understanding Explain the principle of combustion and its using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, and machines. 3 understanding explain the principle of combustion and its should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What and machines. 3 Understanding Explain the principle of combustion and its means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-പ്രകൃതിയും യന്ത്രങ്ങളും. 3 Understanding Explain the principle of combustion and its പദപരിഭാഷണം definition/meaning പദപരിഭാഷണം. പദപരിഭാഷണം പദപരിഭാഷണം, steps, application പദപരിഭാഷണം പദപരിഭാഷണം. Technical terms English-പദപരിഭാഷണം പദപരിഭാഷണം.

▼ 2 Understanding effects on materials. Analyze combustion equations and solve

2 Understanding effects on materials. Analyze combustion equations and solve is an official topic in Module 1 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding effects on materials. Analyze combustion equations and solve using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding effects on materials. analyze combustion equations and solve should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 2 Understanding effects on materials. Analyze combustion equations and solve means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- 2 Understanding effects on materials. Analyze combustion equations and solve definition/meaning. , steps, application . Technical terms English- .

▼ related problems. 3 Applying Compare different fire protection systems for

related problems. 3 Applying Compare different fire protection systems for is an official topic in Module 1 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify related problems. 3 Applying Compare different fire protection systems for using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, related problems. 3 applying compare different fire protection systems for should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What related problems. 3 Applying Compare different fire protection systems for means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-എന്ന related problems. 3 Applying Compare different fire protection systems for ഏകദേശം definition/meaning ഉപയോഗിക്കുന്നു. ഏകദേശം ഏകദേശം ഏകദേശം, steps, application ഉപയോഗിക്കുന്നു. Technical terms English-ൽ ഉപയോഗിക്കുന്നു.

▼ **specific scenarios. 2 Understanding Temperature, heat, specific heat, flashpoint, fire point, ignition, combustion. Types of combustion: rapid, spontaneous, explosions, smoldering combustion. Flames and combustion zones: diffusion, premixed, and flame spread. Hazards of combustion: harmful products, smoke, and fire gases.**

specific scenarios. 2 Understanding Temperature, heat, specific heat, flashpoint, fire point, ignition, combustion. Types of combustion: rapid, spontaneous, explosions, smoldering combustion. Flames and combustion zones: diffusion, premixed, and flame spread. Hazards of combustion: harmful products, smoke, and fire gases. is an official topic in Module 1 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify specific scenarios. 2 Understanding Temperature, heat, specific heat, flashpoint, fire point, ignition, combustion. Types of combustion: rapid, spontaneous, explosions, smoldering combustion. Flames and combustion zones: diffusion, premixed, and flame spread. Hazards of combustion: harmful products, smoke, and fire gases. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.

- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, specific scenarios. 2 understanding temperature, heat, specific heat, flashpoint, fire point, ignition, combustion. types of combustion: rapid, spontaneous, explosions, smoldering combustion. flames and combustion zones: diffusion, premixed, and flame spread. hazards of combustion: harmful products, smoke, and fire gases. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What specific scenarios. 2 Understanding Temperature, heat, specific heat, flashpoint, fire point, ignition, combustion. Types of combustion: rapid, spontaneous, explosions, smoldering combustion. Flames and combustion zones: diffusion, premixed, and flame spread. Hazards of combustion: harmful products, smoke, and fire gases. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-□□ specific scenarios. 2 Understanding Temperature, heat, specific heat, flashpoint, fire point, ignition, combustion. Types of combustion: rapid, spontaneous, explosions, smoldering

combustion. Flames and combustion zones: diffusion, premixed, and flame spread. Hazards of combustion: harmful products, smoke, and fire gases.

പ്രതിരോധനം, definition/meaning പ്രതിരോധനം. പ്രതിരോധനം പ്രതിരോധനം, steps, application പ്രതിരോധനം പ്രതിരോധനം. Technical terms English-പ്രതിരോധനം പ്രതിരോധനം.

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 2

Understand fire growth and heat transfer within enclosures.

This module is presented from the official syllabus scope for Fire Engineering. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Understand fire growth and heat transfer within enclosures.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 2 Understanding decay. Explain factors affecting heat release and

2 Understanding decay. Explain factors affecting heat release and is an official topic in Module 2 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding decay. Explain factors affecting heat release and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding decay. explain factors affecting heat release and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 2 Understanding decay. Explain factors affecting heat release and means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2- 2 Understanding decay. Explain factors affecting heat release and definition/meaning. steps, application. Technical terms English- .

▼ the importance of design fire. 3 Understanding Apply methods to estimate energy release and

the importance of design fire. 3 Understanding Apply methods to estimate energy release and is an official topic in Module 2 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify the importance of design fire. 3 Understanding Apply methods to estimate energy release and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, the importance of design fire. 3 understanding apply methods to estimate energy release and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What the importance of design fire. 3 Understanding Apply methods to estimate energy release and means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2-എന്നതിന്റെ പ്രാധാന്യം ഡിസൈൻ ഫയർ. 3 Understanding Apply methods to estimate energy release and ഡിഫിനിഷൻ/മനസ്സിലാക്കൽ definition/meaning. ഡിഫിനിഷൻ, ഡിഫിനിഷൻ, steps, application ഡിഫിനിഷൻ ഡിഫിനിഷൻ ഡിഫിനിഷൻ. Technical terms English-ൽ ഡിഫിനിഷൻ ഡിഫിനിഷൻ.

▼ heat transfer during fires. 3 Applying Analyze the effects of heat transfer in

heat transfer during fires. 3 Applying Analyze the effects of heat transfer in is an official topic in Module 2 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify heat transfer during fires. 3 Applying Analyze the effects of heat transfer in using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, heat transfer during fires. 3 applying analyze the effects of heat transfer in should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 4**operations.**

This module is presented from the official syllabus scope for Fire Engineering. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: operations.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ hoses, and nozzle reaction.

hoses, and nozzle reaction. is an official topic in Module 4 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify hoses, and nozzle reaction. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, hoses, and nozzle reaction. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What hoses, and nozzle reaction. means in the official course context
Study lens	Principle → components or stages → result → application

Aspect	What to prepare
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4-പമ്പ hoses, and nozzle reaction.

പമ്പയുടെ definition/meaning പമ്പയുടെ പ്രവർത്തനം. പമ്പയുടെ പ്രയോഗം, steps, application പമ്പയുടെ സുരക്ഷാ പ്രവർത്തനം. Technical terms English-ൽ പമ്പയുടെ പ്രവർത്തനം.

▼ Illustrate water relay techniques for firefighting. 3 Applying Discuss the methods used in fire ground rescue

Illustrate water relay techniques for firefighting. 3 Applying Discuss the methods used in fire ground rescue is an official topic in Module 4 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Illustrate water relay techniques for firefighting. 3 Applying Discuss the methods used in fire ground rescue using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, illustrate water relay techniques for firefighting. 3 applying discuss the methods used in fire ground rescue should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What Illustrate water relay techniques for firefighting. 3 Applying Discuss the methods used in fire ground rescue means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4- Illustrate water relay techniques for firefighting. 3 Applying Discuss the methods used in fire ground rescue definition/meaning . . . , steps, application Technical terms English-

▼ and ventilation. 2 Understanding Analyze safety procedures for personnel during

and ventilation. 2 Understanding Analyze safety procedures for personnel during is an official topic in Module 4 of Fire Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify and ventilation. 2 Understanding Analyze safety procedures for personnel during using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, and ventilation. 2 understanding analyze safety procedures for personnel during should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What and ventilation. 2 Understanding Analyze safety procedures for personnel during means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4-പ്രവായന and ventilation. 2 Understanding Analyze safety procedures for personnel during പ്രവായന പ്രവായന definition/meaning പ്രവായന പ്രവായന. പ്രവായന പ്രവായന പ്രവായന, steps, application പ്രവായന പ്രവായന പ്രവായന. Technical terms English-പ്രവായന പ്രവായന.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain and machines. 3 Understanding Explain the principle of combustion and its. (3 marks)**

► **Define or explain 2 Understanding effects on materials. Analyze combustion equations and solve. (3 marks)**

► **Define or explain related problems. 3 Applying Compare different fire protection systems for. (3 marks)**

► **Define or explain specific scenarios. 2 Understanding Temperature, heat, specific heat, flashpoint, fire point, ignition, combustion. Types of combustion: rapid, spontaneous, explosions, smoldering combustion. Flames and combustion zones: diffusion, premixed, and flame spread. Hazards of combustion: harmful products, smoke, and fire gases.. (3 marks)**

Module 2

► **Define or explain 2 Understanding decay. Explain factors affecting heat release and. (3 marks)**

► **Define or explain the importance of design fire. 3 Understanding Apply methods to estimate energy release and. (3 marks)**

► **Define or explain heat transfer during fires. 3 Applying Analyze the effects of heat transfer in. (3 marks)**

► **Define or explain compartment fires. 3 Applying 1 Fire growth in enclosures: ignition, flashover, decay stages. Heat release rate: calorific value, burning rate, and factors affecting heat release. Modes of heat transfer: convection and radiation. Flame height, plume characteristics, and ceiling jets. (3 marks)**

Module 3

► **Define or explain 3 Understanding firefighting tools. Illustrate the use of ladders and rescue tools in. (3 marks)**

► **Define or explain 3 Applying firefighting. Explain safety protocols during fire rescue. (3 marks)**

► **Define or explain 3 Understanding operations Outline maintenance procedures for fire. (3 marks)**

► **Define or explain 3 Applying equipment. Suction and delivery hoses, hose reels, fire pumps, and hydrants. Types of ladders, hydraulic platforms, and rescue tools. Small gear and miscellaneous equipment: ropes, lighting sets, and testing methods. Understand fire hydraulics, discharge calculations, and fire ground. (3 marks)**

Module 4

► **Define or explain hoses, and nozzle reaction.. (3 marks)**

► **Define or explain Illustrate water relay techniques for firefighting. 3 Applying Discuss the methods used in fire ground rescue. (3 marks)**

► **Define or explain and ventilation. 2 Understanding Analyze safety procedures for personnel during. (3 marks)**

► **Define or explain firefighting operations. 3 Applying 1 Fire hydraulics: flow in pipes, fire hoses, nozzle reaction. Water relay techniques and estimation of water requirements. Fire ground operations: preplanning, rescue methods, ventilation, and salvage. . Text / Reference: T/R Book Title/Author Ron Hirst, Underdowns, “Practical fire precautions”, Gower publishing company R1 Ltd., England. Jain V.K. “Fire safety in buildings” (2nd edn.). New Age International (P) Ltd., R2 New Delhi. R3 Andrew L Simon, Fire hydraulics Prentice-Hall Inc., USA. Bjorn Karlsson and James G. Quintiere, Enclosure Fire Dynamics, CRC Press, R4 USA. Dougal Drysdale An Introduction to Fire Dynamics, (2nd edn.), John Wiley & Sons R5 Ltd.,England.. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **and machines. 3**

Understanding Explain the principle of combustion and its.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **2 Understanding decay.**

Explain factors affecting heat release and.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **3 Understanding firefighting tools. Illustrate the use of ladders and rescue tools in.**

3-mark explanation: Explain one principle, process or comparison from

Module 4

1-mark definition: State the meaning of **hoses, and nozzle reaction..**

3-mark explanation: Explain one principle, process or comparison from this module.

this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
