

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 4051

4 Credits: 4

Program Core

Source-grounded

Heat Power Engineering

□ To get elementary knowledge about thermodynamic processes, cycles, fundamental

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 4051 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 4051.pdf from the uploaded official SITTTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Automobile Engineering
Course code	4051
Course title	Heat Power Engineering
Semester	4 Credits: 4
Course category	Program Core
Periods per week	4 (L:3, T:1, P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

20 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES**Objectives, outcomes and mapping****Course objectives**

- □ To get elementary knowledge about thermodynamic processes, cycles, fundamental
- laws of thermodynamics.
- □ To understand the laws of conversion of heat energy into work or power and its
- applications in automobile industries.
- □ To deal with thermodynamic systems such as heat engines, heat exchangers
- (radiators), automobile air conditioning, compressors etc.
- □ To understand the terminologies used in the testing of engine performances.

Course outcomes

CO	Official outcome	Study level
CO1	15 Applying in thermodynamics Select air standard efficiency of Carnot cycle, Otto	See official syllabus
CO2	14 Applying cycle and Diesel cycles.	See official syllabus
CO3	Solve the performance parameters of engines. 15 Applying Make use of the principles of heat transfer and	See official syllabus
CO4	14 Applying working of air compressors.	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3
CO2	CO2 3
CO3	CO3 3

Row	Extracted official mapping
CO4	CO4 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Choose the basic terms, laws and types of processes in thermodynamics.	4	As specified
Module 2	Select air standard efficiency of Carnot cycle, Otto cycle and Diesel cycles	6	As specified
Module 3	Solve the performance parameters of engines.	5	As specified
Module 4	compressors.	5	As specified

MODULE 1

Choose the basic terms, laws and types of processes in thermodynamics.

This module is presented from the official syllabus scope for Heat Power Engineering. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Choose the basic terms, laws and types of processes in thermodynamics.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ Define basic terms of thermodynamics 3 Remembering Explain First, Second, Third and Zeroth Laws M10.2 1 Understanding of thermodynamics. Summarize the basic concepts of entropy,

Define basic terms of thermodynamics 3 Remembering Explain First, Second, Third and Zeroth Laws M10.2 1 Understanding of thermodynamics. Summarize the basic concepts of entropy, is an official topic in Module 1 of Heat Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Define basic terms of thermodynamics 3 Remembering Explain First, Second, Third and Zeroth Laws M10.2 1 Understanding of thermodynamics. Summarize the basic concepts of entropy, using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, define basic terms of thermodynamics 3 remembering explain first, second, third and zeroth laws m10.2 1 understanding of thermodynamics. summarize the basic concepts of entropy, should be discussed

with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Define basic terms of thermodynamics 3 Remembering Explain First, Second, Third and Zeroth Laws M10.2 1 Understanding of thermodynamics. Summarize the basic concepts of entropy, means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- Define basic terms of thermodynamics 3 Remembering Explain First, Second, Third and Zeroth Laws M10.2 1 Understanding of thermodynamics. Summarize the basic concepts of entropy, definition/meaning. steps, application. Technical terms English-.

▼ 2 Understanding enthalpy and internal energy. Make use of various types of thermodynamic

2 Understanding enthalpy and internal energy. Make use of various types of thermodynamic is an official topic in Module 1 of Heat Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding enthalpy and internal energy. Make use of various types of thermodynamic using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding enthalpy and internal energy. make use of various types of thermodynamic should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 2 Understanding enthalpy and internal energy. Make use of various types of thermodynamic means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-2 Understanding enthalpy and internal energy. Make use of various types of thermodynamic definition/meaning. Steps, application. Technical terms English- Malayalam.

▼ 6 Applying processes. Solve problems on different types of

6 Applying processes. Solve problems on different types of is an official topic in Module 1 of Heat Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 6 Applying processes. Solve problems on different types of using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 6 applying processes. solve problems on different types of should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 6 Applying processes. Solve problems on different types of means in the official course context

Aspect	What to prepare
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-6 Applying processes. Solve problems on different types of processes. definition/meaning. steps, application. Technical terms English- Malayalam.

▼ 3 Applying thermodynamic processes. Fundamentals of thermodynamics and thermodynamic processes Classification of thermodynamics, Application areas of thermodynamics, Dimensional homogeneity, Basics of thermodynamics - thermodynamic system, surroundings, boundary, types of system, properties of a system, state, thermodynamic equilibrium, Ideal gas equation of state - Derivation, pressure and its units, temperature and its units, Zeroth law of thermodynamics, Specific heat at constant pressure and constant volume, relationship between specific heats and gas constant, Internal Energy, flow energy and moving boundary work, First law of thermodynamics - Enthalpy, Second law of thermodynamics, Entropy-Third law of thermodynamics. Processes and cycle. Pressure volume diagram, Temperature entropy diagram, Types of processes - Derivations on PVT relationship, heat transfer, work transfer, change in entropy, enthalpy and internal energy of isochoric, isobaric, isothermal and adiabatic processes. Simple problems to find change in internal energy, heat transfer, work transfer etc.

3 Applying thermodynamic processes. Fundamentals of thermodynamics and thermodynamic processes Classification of thermodynamics, Application areas of thermodynamics, Dimensional homogeneity, Basics of thermodynamics - thermodynamic system, surroundings, boundary, types of system, properties of a system, state, thermodynamic equilibrium, Ideal gas equation of state - Derivation, pressure and its units, temperature and its units, Zeroth law of thermodynamics, Specific heat at constant pressure and constant volume, relationship between specific heats and gas constant, Internal Energy, flow energy and moving boundary work, First law of thermodynamics - Enthalpy, Second law of thermodynamics, Entropy-Third law of thermodynamics. Processes and cycle. Pressure volume diagram, Temperature entropy diagram, Types of processes - Derivations on PVT relationship, heat transfer, work transfer, change in entropy, enthalpy and internal energy of isochoric, isobaric, isothermal and adiabatic processes. Simple problems to find change in internal energy, heat transfer, work transfer etc. is an official topic in Module 1 of Heat

Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Applying thermodynamic processes. MODULE 2

Select air standard efficiency of Carnot cycle, Otto cycle and Diesel cycles

This module is presented from the official syllabus scope for Heat Power Engineering. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Select air standard efficiency of Carnot cycle, Otto cycle and Diesel cycles
- Official duration: As specified
- Official topic entries captured: 6
- The full source excerpt is preserved below for coverage checking.

▼ thermodynamic cycles. Classify and compare 2 Understanding, thermodynamic cycles. Define available energy, theoretical thermal

thermodynamic cycles. Classify and compare 2 Understanding, thermodynamic cycles. Define available energy, theoretical thermal is an official topic in Module 2 of Heat Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify thermodynamic cycles. Classify and compare 2 Understanding, thermodynamic cycles. Define available energy, theoretical thermal using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, thermodynamic cycles. classify and compare 2 understanding, thermodynamic cycles. define available energy, theoretical thermal should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What thermodynamic cycles. Classify and compare 2 Understanding, thermodynamic cycles. Define available energy, theoretical thermal means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2-തെർമോഡൈനാമിക് സൈക്കിൾ. Classify and compare 2 Understanding, thermodynamic cycles. efficiency, brake thermal efficiency, 6 Understanding volumetric efficiency, Mechanical efficiency, Mean effective pressures, and specific fuel consumption. Solve the problems related to testing of is an official topic in Module 3 of Heat Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify efficiency, brake thermal efficiency, 6 Understanding volumetric efficiency, Mechanical efficiency, Mean effective pressures, and specific fuel consumption. Solve the problems related to testing of using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, efficiency, brake thermal efficiency, 6 understanding volumetric efficiency, mechanical efficiency, mean effective pressures, and specific fuel consumption. solve the problems related to testing of should be

discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What efficiency, brake thermal efficiency, 6 Understanding volumetric efficiency, Mechanical efficiency, Mean effective pressures, and specific fuel consumption. Solve the problems related to testing of means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3-എഫ് ഏഫിസിസി, ബ്രേക്ക് തെർമൽ ഏഫിസിസി, 6 Understanding volumetric efficiency, Mechanical efficiency, Mean effective pressures, and specific fuel consumption. Solve the problems related to testing of എഫ് ഏഫിസിസി definition/meaning എഫ് ഏഫിസിസി. എഫ് ഏഫിസിസി steps, application എഫ് ഏഫിസിസി. Technical terms English-എ ഏഫിസിസി.

▼ 4 Applying Internal combustion engines. Summarize how Morse test is conducted in

4 Applying Internal combustion engines. Summarize how Morse test is conducted in is an official topic in Module 3 of Heat Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Applying Internal combustion engines. Summarize how Morse test is conducted in using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 applying internal combustion engines. summarize how morse test is conducted in should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 4**compressors.**

This module is presented from the official syllabus scope for Heat Power Engineering. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: compressors.
- Official duration: As specified
- Official topic entries captured: 5
- The full source excerpt is preserved below for coverage checking.

▼ Identify the fields of application of heat 4 Applying transfer. Compare three modes of heat transfer and

Identify the fields of application of heat 4 Applying transfer. Compare three modes of heat transfer and is an official topic in Module 4 of Heat Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Identify the fields of application of heat 4 Applying transfer. Compare three modes of heat transfer and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, identify the fields of application of heat 4 applying transfer. compare three modes of heat transfer and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What Identify the fields of application of heat 4 Applying transfer. Compare three modes of heat transfer and means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4-എന്നു തിരിച്ചറിയുന്നതുകൊണ്ട് ചൂട് 4 പ്രയോജനപ്പെടുത്തുന്നു. താരതമ്യം ചെയ്തുകൊണ്ട് ചൂട് കൈമാറ്റത്തിന്റെ മൂന്ന് രീതികളും അർത്ഥം/പ്രാധാന്യം വ്യക്തമാക്കുന്നു. താരതമ്യം ചെയ്തുകൊണ്ട്, steps, application എന്നിവയെക്കുറിച്ച് വിശദീകരിക്കുന്നു. Technical terms English-ൽ എഴുതുന്നു.

▼ their rate equations. Illustrate two types of convective mode of

their rate equations. Illustrate two types of convective mode of is an official topic in Module 4 of Heat Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify their rate equations. Illustrate two types of convective mode of using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, their rate equations. illustrate two types of convective mode of should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What their rate equations. Illustrate two types of convective mode of means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4- $\square\square$ their rate equations. Illustrate two types of convective mode of $\square\square\square\square\square\square\square\square\square\square$ $\square\square\square\square$ definition/meaning $\square\square\square\square\square\square\square\square\square\square$. $\square\square\square\square\square$ $\square\square\square\square\square$ $\square\square\square\square\square\square$, steps, application $\square\square\square\square\square$ $\square\square\square\square\square\square\square\square$. Technical terms English- $\square$ $\square\square\square\square$ $\square\square\square\square\square\square\square\square\square$.

▼ 2 Understanding heat transfer- natural and forced. Define air compressor, explain uses of

2 Understanding heat transfer- natural and forced. Define air compressor, explain uses of is an official topic in Module 4 of Heat Power Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding heat transfer- natural and forced. Define air compressor, explain uses of using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding heat transfer- natural and forced. define air compressor, explain uses of should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4-□□ multistage air compressors. Explain the merits 4 Understanding and demerits of multistage compression. Text / Reference: T/R Book Title/Author T1 Thermal Engineering R.S.Khurmi S

RAPID REFERENCE**Concept and formula bank****Answer structure**

Definition → Principle →
Components/steps →
Application → Conclusion

Use this sequence for descriptive questions when the topic does not require a numerical formula.

Practical record

Aim → Apparatus → Procedure
→ Observation → Result →
Safety

Use this sequence for laboratory, workshop and field activities.

RAPID REVISION**Diagram and source-transcript library****Module 1 source and topic cards**

Jump to official terminology, topic explanations and study guidance.

Module 2 source and topic cards

OFFICIAL SELF-LEARNING**Activities from the syllabus**

Use the extracted official activity wording as the record of required self-learning work.

The official PDF does not expose a separate activities heading in the extracted text; consult the source PDF pages for the exact activity list.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL**Module-wise questions and answers**

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain Define basic terms of thermodynamics 3 Remembering Explain First, Second, Third and Zeroth Laws M10.2 1 Understanding of thermodynamics. Summarize the basic concepts of entropy,. (3 marks)**

► **Define or explain 2 Understanding enthalpy and internal energy. Make use of various types of thermodynamic. (3 marks)**

► **Define or explain 6 Applying processes. Solve problems on different types of. (3 marks)**

► **Define or explain 3 Applying thermodynamic processes. Fundamentals of thermodynamics and thermodynamic processes Classification of thermodynamics, Application areas of thermodynamics, Dimensional homogeneity, Basics of thermodynamics - thermodynamic system, surroundings, boundary, types of system, properties of a system, state, thermodynamic equilibrium, Ideal gas equation of state - Derivation, pressure and its units, temperature and its units, Zeroth law of thermodynamics, Specific heat at constant pressure and constant volume, relationship between specific heats and gas constant, Internal Energy, flow energy and moving boundary work, First law of thermodynamics - Enthalpy, Second law of thermodynamics, Entropy- Third law of thermodynamics. Processes and cycle. Pressure volume diagram, Temperature entropy diagram, Types of processes - Derivations on PVT relationship, heat transfer, work transfer, change in entropy, enthalpy and internal energy of isochoric, isobaric, isothermal**

and adiabatic processes. Simple problems to find change in internal energy, heat transfer, work transfer etc.. (3 marks)

Module 2

► Define or explain thermodynamic cycles. Classify and compare 2 Understanding, thermodynamic cycles. Define available energy, theoretical thermal. (3 marks)

► Define or explain 2 Remembering, efficiency / air standard efficiency. Summarize the theoretical thermal efficiency. (3 marks)

► Define or explain 2 Understanding of Carnot cycle.. (3 marks)

► Define or explain Solve simple problems on Carnot cycle. 2 Applying Explain theoretical thermal efficiency of Otto. (3 marks)

Module 3

► Define or explain efficiency, brake thermal efficiency, 6 Understanding volumetric efficiency, Mechanical efficiency, Mean effective pressures, and specific fuel consumption. Solve the problems related to testing of. (3 marks)

► Define or explain 4 Applying Internal combustion engines. Summarize how Morse test is conducted in. (3 marks)

► Define or explain 1 Understanding multi cylinder engines.. (3 marks)

► Define or explain Explain how heat balance sheets are prepared. 1 Understanding Solve the problems on Morse test and Heat. (3 marks)

Module 4

► **Define or explain Identify the fields of application of heat 4 Applying transfer. Compare three modes of heat transfer and. (3 marks)**

► **Define or explain their rate equations. Illustrate two types of convective mode of. (3 marks)**

► **Define or explain 2 Understanding heat transfer- natural and forced. Define air compressor, explain uses of. (3 marks)**

► **Define or explain 3 Understanding compressed air and classify air compressors. Illustrate the working of single stage and. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **Define basic terms of thermodynamics** 3 Remembering **Explain First, Second, Third and Zeroth Laws** M10.2 1 **Understanding of thermodynamics. Summarize the basic concepts of entropy,**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **thermodynamic cycles. Classify and compare 2 Understanding, thermodynamic cycles. Define available energy, theoretical thermal.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **efficiency, brake thermal**

Module 4

1-mark definition: State the meaning of **Identify the fields of**

efficiency, 6 Understanding volumetric efficiency, Mechanical efficiency, Mean effective pressures, and specific fuel consumption. Solve the problems related to testing of.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

application of heat 4 Applying transfer. Compare three modes of heat transfer and.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
