

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 4061

4 Credits: 4

Program core

Source-grounded

Yarn Manufacture II

□ To impart the knowledge of constructional features and working of Speed frame,

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTR syllabus PDF for Course 4061 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 4061.pdf from the uploaded official SITTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Textile Technology
Course code	4061
Course title	Yarn Manufacture II
Semester	4 Credits: 4
Course category	Program core
Periods per week	4 (L:3, T:1, P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

16 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES**Objectives, outcomes and mapping****Course objectives**

- To impart the knowledge of constructional features and working of Speed frame,
- Ring frame , doubling machines & advanced spinning systems
- To understand the process involved in the conversion sliver to yarn
- To estimate the draft, production and efficiency of the machines.

Course outcomes

CO	Official outcome	Study level
CO1	18 Applying frame. Describe the process of yarn formation through	See official syllabus
CO2	condensed yarn spinning and other advanced 15 Understanding spinning techniques. Discuss the different methods of yarn doubling	See official syllabus
CO3	10 Understanding techniques and reeling of yarn. Illustrate and solve the problems related to draft,	See official syllabus
CO4	twist, angle of yarn pull, traveler lag and 15 Applying determine production of various machines.	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3 1
CO2	CO2 3
CO3	CO3 3
CO4	CO4 3 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Illustrate the working of Speed frame and Ring frame	4	As specified
Module 2	and advanced spinning techniques.	4	As specified
Module 3	of yarn.	4	As specified
Module 4	determine production of speed frame, ring frame, rotor spinning, Ring	4	As specified

MODULE 1

Illustrate the working of Speed frame and Ring frame

This module is presented from the official syllabus scope for Yarn Manufacture II. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Illustrate the working of Speed frame and Ring frame
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 5 Understanding the functions of the parts involved. Discuss the modern developments in speed

5 Understanding the functions of the parts involved. Discuss the modern developments in speed is an official topic in Module 1 of Yarn Manufacture II. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 5 Understanding the functions of the parts involved. Discuss the modern developments in speed using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 5 understanding the functions of the parts involved. discuss the modern developments in speed should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 5 Understanding the functions of the parts involved. Discuss the modern developments in speed means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-5 Understanding the functions of the parts involved. Discuss the modern developments in speed
 definition/meaning .
 , steps, application . Technical terms English-
 .

▼ 4 Understanding frame. Describe the working of Ring frame and the

4 Understanding frame. Describe the working of Ring frame and the is an official topic in Module 1 of Yarn Manufacture II. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding frame. Describe the working of Ring frame and the using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding frame. describe the working of ring frame and the should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 4 Understanding frame. Describe the working of Ring frame and the means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-4 Understanding frame. Describe the working of Ring frame and the definition/meaning. steps, application. Technical terms English- Malayalam.

▼ functions of the parts involved and building 5 Understanding mechanism of Ring frame. Identify and analyse the possible Ring frame

functions of the parts involved and building 5 Understanding mechanism of Ring frame. Identify and analyse the possible Ring frame is an official topic in Module 1 of Yarn Manufacture II. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify functions of the parts involved and building 5 Understanding mechanism of Ring frame. Identify and analyse the possible Ring frame using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, functions of the parts involved and building 5 understanding mechanism of ring frame. identify and analyse the possible ring frame should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding doubling illustrate the working of ring doubler and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 2 Understanding doubling Illustrate the working of Ring doubler and means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- 2 Understanding doubling Illustrate the working of Ring doubler and definition/meaning. steps, application. Technical terms English- .

▼ 3 Understanding TFO machine Discuss the types of fancy yarn and working of

3 Understanding TFO machine Discuss the types of fancy yarn and working of is an official topic in Module 3 of Yarn Manufacture II. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding TFO machine Discuss the types of fancy yarn and working of using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding tfo machine discuss the types of fancy yarn and working of should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 4

determine production of speed frame, ring frame, rotor spinning, Ring

This module is presented from the official syllabus scope for Yarn Manufacture II. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: determine production of speed frame, ring frame, rotor spinning, Ring
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 4 Applying and machine efficiency of speed frame Determine the TPI, actual draft, angle of yarn

4 Applying and machine efficiency of speed frame Determine the TPI, actual draft, angle of yarn is an official topic in Module 4 of Yarn Manufacture II. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Applying and machine efficiency of speed frame Determine the TPI, actual draft, angle of yarn using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 applying and machine efficiency of speed frame determine the tpi, actual draft, angle of yarn should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 4 Applying and machine efficiency of speed frame Determine the TPI, actual draft, angle of yarn means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4- 4 Applying and machine efficiency of speed frame Determine the TPI, actual draft, angle of yarn definition/meaning . steps, application . Technical terms English- .

▼ pull, traveller speed, traveller lag, and twist 4 Applying contraction in Ring frame. Determine the production and machine

pull, traveller speed, traveller lag, and twist 4 Applying contraction in Ring frame. Determine the production and machine is an official topic in Module 4 of Yarn Manufacture II. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify pull, traveller speed, traveller lag, and twist 4 Applying contraction in Ring frame. Determine the production and machine using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, pull, traveller speed, traveller lag, and twist 4 applying contraction in ring frame. determine the production and machine should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What pull, traveller speed, traveller lag, and twist 4 Applying contraction in Ring frame. Determine the production and machine means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4-പുല്ല, ട്രാവലർ സ്പീഡ്, ട്രാവലർ ലാഗ്, and twist 4 Applying contraction in Ring frame. Determine the production and machine പരസ്പരം definition/meaning പരസ്പരം. പരസ്പരം പരസ്പരം, steps, application പരസ്പരം പരസ്പരം പരസ്പരം. Technical terms English-പുല്ല പരസ്പരം പരസ്പരം.

▼ efficiency of Ring frame and Rotor spinning 4 Applying machine. Determine the resultant count , production and

efficiency of Ring frame and Rotor spinning 4 Applying machine. Determine the resultant count , production and is an official topic in Module 4 of Yarn Manufacture II. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify efficiency of Ring frame and Rotor spinning 4 Applying machine. Determine the resultant count , production and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, efficiency of ring frame and rotor spinning 4 applying machine. determine the resultant count , production and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL**Module-wise questions and answers**

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain 5 Understanding the functions of the parts involved. Discuss the modern developments in speed. (3 marks)**

► **Define or explain 4 Understanding frame. Describe the working of Ring frame and the. (3 marks)**

► **Define or explain functions of the parts involved and building 5 Understanding mechanism of Ring frame. Identify and analyse the possible Ring frame. (3 marks)**

► **Define or explain processing defects and suggest remedies to 4 Applying solve them. Objectives of Speed frame - working of speed frame machine- SKF PK 1500 drafting system - Constructional details of flyer assembly - Function of cots, condenser, false twister, spindle, Principles of winding - Flyer lead and bobbin lead, objectives of builder motion, Objectives of Differential motion, Developments in speed frame - Features of multi motor drive system, Roving stop motion using light barriers, Auto doffing and bobbin transport system. Objectives of Ring frame - working of Ring frame machine - LR pneumatic top arm drafting system- function of bobbin holder, roving traverse guide, fluted and knurled roller, spacer, cradle, nose bar, roller clearer, pneumafil suction system, Traversing thread guide, ABC ring, separator, top roller cots and shore hardness, aprons-Rings Types - Low crown ring & Anti-wedge ring - Comparison of C-traveller and Elliptical traveler - concept of Traveller number and Ring Flange number ,Running in period of ring, Construction details of Modern spindle, Twisting principle, objectives of**

building mechanism, working of building mechanism of Ring frame for weft wind, Methods for achieving variable spindle speed in spinning - VFD & VPS. Identify and analyze the possible Ring frame processing defects such as excessive end breaks, slubs, thick and thin places, soft yarn, neps, snarls and suggest remedies to solve them. Describe the process of yarn formation through condensed yarn spinning. (3 marks)

Module 2

► **Define or explain compact spinning and benefits of compact 3 Understanding yarn Discuss the principle of open end spinning and. (3 marks)**

► **Define or explain 4 Understanding working of Rotor spinning. Illustrate the principle of Friction spinning and. (3 marks)**

► **Define or explain 4 Understanding working of DREF II spinning machine. Explain the principle of Air jet spinning and. (3 marks)**

► **Define or explain 4 Understanding working of Murata Air jet spinner. Need for Compacting element in condensed yarn spinning - concept of spinning Geometry - Working of Elite compact spinning system - advantages of compact yarn - Working of SIRO spinning-Different advanced spinning systems - principle of open end spinning system-working of Rotor spinning system - Functions of opening roller, transport tube, Rotor, navel, take up tube - Relation between fibre length and rotor diameter, rotor speed - Types of rotor groove - advantages and limitations of rotor spinning over ring spinning - Principle of friction spinning - working of DREF II friction spinning - Principle of air jet spinning - fasciated yarn - working of Murata Air jet spinning - comparison of yarn structure and properties of ring, rotor and air jet yarn. Describe the different mechanism of yarn doubling techniques and reeling. (3 marks)**

Module 3

► **Define or explain 2 Understanding doubling Illustrate the working of Ring doubler and. (3 marks)**

► **Define or explain 3 Understanding TFO machine Discuss the types of fancy yarn and working of. (3 marks)**

► **Define or explain 3 Understanding fancy doubler. Describe the objectives of reeling and the. (3 marks)**

► **Define or explain 2 Understanding concept of bundling and baling. Contents Objects of doubling - dry and wet doubling - English and scotch system of wet doubling - Effect of Twist direction - D/S ratio of doubled yarn - Types of doubled yarn - ply, cord, cable, poplin, sewing thread, voile - Types of doubling machine - working of Ring doubler - Objectives of assembly winder - working of TFO - Merits of TFO over Ring doubler - Define fancy yarn - Types of fancy yarn - slub yarn, marl yarn, corkscrew yarn, loop yarn and snarl yarn - Working of Fancy doubler - Objectives of Reeling - working of Plain reeling machine - Concept of bundling and baling - relationship between number of knots in a bundle and count. Illustrate the concept of draft, twist, angle of yarn pull, traveler lag and. (3 marks)**

Module 4

► **Define or explain 4 Applying and machine efficiency of speed frame Determine the TPI, actual draft, angle of yarn. (3 marks)**

► **Define or explain pull, traveller speed, traveller lag, and twist 4 Applying contraction in Ring frame. Determine the production and machine. (3 marks)**

► **Define or explain efficiency of Ring frame and Rotor spinning 4 Applying machine. Determine the resultant count , production and. (3**

marks)

► **Define or explain efficiency of Ring doubler and TFO 3 Applying machine Roving hank calculation - TPI and actual draft calculation of speed frame & ring frame - concept of angle of yarn pull - traveler speed - traveller lag - twist contraction and its calculation - production and efficiency of speed frame & ring frame - production & efficiency of Rotor spinning machine - Resultant count - production and efficiency of Ring doubler & TFO machine. PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **5 Understanding the functions of the parts involved. Discuss the modern developments in speed.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **compact spinning and benefits of compact 3 Understanding yarn Discus the principle of open end spinning and.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **2 Understanding doubling Illustrate the working of Ring doubler and.**

Module 4

1-mark definition: State the meaning of **4 Applying and machine efficiency of speed frame Determine the TPI, actual draft, angle of yarn.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY
