

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 5073C

5 Credits: 4

Program Core

Source-grounded

Material Science and

□ To impart the basic concepts of metallurgy and materials of construction in chemical

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 5073C is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5073C.pdf from the uploaded official SITTTTR syllabus archive.

Course code and title: preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Chemical Engineering
Course code	5073C
Course title	Material Science and
Semester	5 Credits: 4
Course category	Program Core
Periods per week	4 (L: 4 T: 0 P: 0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

16 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES**Objectives, outcomes and mapping****Course objectives**

- To impart the basic concepts of metallurgy and materials of construction in chemical

Course outcomes

CO	Official outcome	Study level
CO1	Summarize the structural properties of crystals 13 Understanding	See official syllabus
CO2	Summarize the properties of materials 17 Understanding Summarize the processing and application of metal	See official syllabus
CO3	17 Understanding alloys Summarize the characteristics and processing of	See official syllabus
CO4	13 inorganic materials Understanding	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 2
CO2	CO2 2
CO3	CO3 2
CO4	CO4 2

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Summarize the structural properties of crystals	4	As specified
Module 2	Summarize the properties of materials	4	As specified
Module 3	Summarize the processing and application of metal alloys	4	As specified
Module 4	Summarize the characteristics and processing of inorganic materials	4	As specified

MODULE 1

Summarize the structural properties of crystals

This module is presented from the official syllabus scope for Material Science and. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Summarize the structural properties of crystals
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 2 Understanding technology.

2 Understanding technology. is an official topic in Module 1 of Material Science and. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding technology. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding technology. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 2 Understanding technology. means in the official course context
Study lens	Principle → components or stages → result → application

Aspect	What to prepare
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-2 Understanding technology.

പദപരിഭാഷണം, definition/meaning, steps, application, Technical terms English- Malayalam പദപരിഭാഷണം.

▼ Identify the various materials and its applications 3 Understanding.

Identify the various materials and its applications 3 Understanding. is an official topic in Module 1 of Material Science and. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Identify the various materials and its applications 3 Understanding. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, identify the various materials and its applications 3 understanding. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

MODULE 2

Summarize the properties of materials

This module is presented from the official syllabus scope for Material Science and. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Summarize the properties of materials
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ Summarise the mechanical properties of materials 5 Understanding Summarise the elastic and hardness properties

Summarise the mechanical properties of materials 5 Understanding Summarise the elastic and hardness properties is an official topic in Module 2 of Material Science and. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Summarise the mechanical properties of materials 5 Understanding Summarise the elastic and hardness properties using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, summarise the mechanical properties of materials 5 understanding summarise the elastic and hardness properties should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 5 Understanding metal and alloys Processing of metal alloys: types of alloys-ferrous and nonferrous alloys-forming operation and types- casting operation and types- powder metallurgy-welding. Thermal processing- annealing-heat treatment of steel-precipitation hardening. Corrosion of metals: electro chemical consideration-corrosion rates – prediction of corrosion-forms of corrosion – corrosion prevention methods. Properties and application of Metals and alloys: Engineering materials - ferrous metals - Iron and their alloys Iron and steel - Iron carbon equilibrium diagram. Non-ferrous metals and alloys - Aluminum, copper, Zinc, lead, Nickel and their alloys with reference to the application in chemical industries. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 5 understanding metal and alloys processing of metal alloys: types of alloys-ferrous and nonferrous alloys-forming operation and types- casting operation and types- powder metallurgy-welding. thermal processing- annealing-heat treatment of steel-precipitation hardening. corrosion of metals: electro chemical consideration-corrosion rates – prediction of corrosion-forms of corrosion – corrosion prevention methods. properties and application of metals and alloys: engineering materials - ferrous metals - iron and their alloys iron and steel - iron carbon equilibrium diagram. non-ferrous metals and alloys - aluminum, copper, zinc, lead, nickel and their alloys with reference to the application in chemical industries. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 4

Summarize the characteristics and processing of inorganic materials

This module is presented from the official syllabus scope for Material Science and. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Summarize the characteristics and processing of inorganic materials
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 3 Understanding ceramics Outline the characteristics and processing of

3 Understanding ceramics Outline the characteristics and processing of is an official topic in Module 4 of Material Science and. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding ceramics Outline the characteristics and processing of using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding ceramics outline the characteristics and processing of should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► Define or explain 2 Understanding technology.. (3 marks)

► Define or explain Identify the various materials and its applications 3 Understanding.. (3 marks)

► Define or explain Outline crystal structure 4 Understanding.. (3 marks)

► Define or explain Summarize the imperfections in crystal. 4 Understanding Material science engineering: necessity for material science and engineering- components of material science and engineering. Classification of materials with applications- engineering requirement of materials - selection of materials. Crystal structure: structure of atoms and molecules -Crystal structure- Crystal geometry, structure of solids, methods of determining structures-X-ray diffraction technique-nano crystalline solids. Imperfection in crystals: types of imperfection. Point imperfection and types- miscellaneous imperfections and types - microscopic examination; optical microscopy, SEM, TEM. (3 marks)

Module 2

► Define or explain Summarise the mechanical properties of materials 5 Understanding Summarise the elastic and hardness properties. (3 marks)

► **Define or explain 4 Understanding of material. (3 marks)**

► **Define or explain Summarise the electrical properties of the material. 4 Understanding Summarise the magnetic properties of the. (3 marks)**

► **Define or explain 3 Understanding material Properties of materials: Mechanical; stress and strain, tension, compression, shear and torsional test-stress strain behavior. Elastic properties: plastic deformation-tensile properties, yielding and yield strength, tensile strength, ductility, resilience, toughness- hardness; Rockwell hardness, Brinell hardness, Vickers hardness. Electrical properties: electrical conduction and conductivity-superconductivity-semi conductivity- electrical conduction in polymers and ionic ceramics- dielectric behavior - ferro electricity - Piezo electricity. Magnetic properties: magnetism- types of magnetism- Dia-magnetism- Para-magnetism- Ferro-magnetism- Anti-ferro-magnetism- Ferri-magnetism-with examples.. (3 marks)**

Module 3

► **Define or explain Summarise the processing of metal alloys 4 Understanding Summarise the thermal processing of metal. (3 marks)**

► **Define or explain 4 Understanding alloys. (3 marks)**

► **Define or explain Interpret corrosion in metal and alloys. 4 Understanding Summarize the properties and application of. (3 marks)**

► **Define or explain 5 Understanding metal and alloys Processing of metal alloys: types of alloys-ferrous and nonferrous alloys-forming operation and types- casting operation and types- powder metallurgy-welding. Thermal processing- annealing-heat treatment of steel-precipitation hardening. Corrosion of metals: electro chemical consideration-corrosion rates - prediction of corrosion-forms of corrosion - corrosion prevention methods. Properties and application of**

Metals and alloys: Engineering materials - ferrous metals - Iron and their alloys Iron and steel - Iron carbon equilibrium diagram. Non-ferrous metals and alloys - Aluminum, copper, Zinc, lead, Nickel and their alloys with reference to the application in chemical industries.. (3 marks)

Module 4

► **Define or explain 3 Understanding ceramics Outline the characteristics and processing of. (3 marks)**

► **Define or explain 3 Understanding polymers. Outline the characteristics and processing of. (3 marks)**

► **Define or explain 3 Understanding composites. Identify the types and applications of inorganic. (3 marks)**

► **Define or explain 3 Understanding materials. Characteristic and processing of ceramics: ceramics - crystal structure - silicates and carbon- mechanical properties - ceramic fabrication techniques - glass forming - particulate forming- cementation. Characteristic and processing of polymers: polymer classification- Molecular characteristics (classification only) - polymerization- polymer additives- forming techniques for plastics, elastomers and fibers - Mechanical behavior- crystallization, melting and glass transition in polymers- degradation of polymers. PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **2 Understanding technology..**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **Summarise the mechanical properties of materials 5 Understanding Summarise the elastic and hardness properties.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **Summarise the processing of metal alloys 4 Understanding Summarise the thermal processing of metal.**

Module 4

1-mark definition: State the meaning of **3 Understanding ceramics Outline the characteristics and processing of.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
