

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 5091

5 Credits: 4

Program Core

Source-grounded

Tyre Technology

□ To understand the development, classifications and nomenclature of pneumatic tyres.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTR syllabus PDF for Course 5091 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5091.pdf from the uploaded official SITTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Polymer Technology
Course code	5091
Course title	Tyre Technology
Semester	5 Credits: 4
Course category	Program Core
Periods per week	4 (L:3, T:1, P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

16 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES**Objectives, outcomes and mapping****Course objectives**

- □ To understand the development, classifications and nomenclature of pneumatic tyres.
- □ To acquire knowledge on the different components of tyres, raw materials used and
- their design.
- □ To understand tyre building, curing and testing

Course outcomes

CO	Official outcome	Study level
CO1	15 Understanding pneumatic tyres. Summarize design and production of	See official syllabus
CO2	15 Understanding pneumatic tyre and tube Explain design and production of cycle tyre,	See official syllabus
CO3	14 Understanding cycle tube, solid tyre and re-treading	See official syllabus
CO4	Generalize tyre and tube testing methods 14 Understanding	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3
CO2	CO2 3 3
CO3	CO3 3 3

Row	Extracted official mapping
CO4	CO4 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Describe statistics, design and development of pneumatic tyres.	4	As specified
Module 2	Summarize design and production of pneumatic tyre and tube	4	As specified
Module 3	re-treading	4	As specified
Module 4	Generalize tyre and tube testing methods.	4	As specified

MODULE 1

Describe statistics, design and development of pneumatic tyres.

This module is presented from the official syllabus scope for Tyre Technology. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Describe statistics, design and development of pneumatic tyres.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 3 Remembering pneumatic tyres. Explain different components of tyre and

3 Remembering pneumatic tyres. Explain different components of tyre and is an official topic in Module 1 of Tyre Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Remembering pneumatic tyres. Explain different components of tyre and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 remembering pneumatic tyres. explain different components of tyre and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 3 Remembering pneumatic tyres. Explain different components of tyre and means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-3 Remembering pneumatic tyres. Explain different components of tyre and തിരഞ്ഞെടുക്കുന്നതിന് നിർവ്വചനം/അർത്ഥം തിരഞ്ഞെടുക്കുന്നതിന്, steps, application തിരഞ്ഞെടുക്കുന്നതിന് നിർവ്വചനം. Technical terms English-ൽ തിരഞ്ഞെടുക്കുന്നതിന് തിരഞ്ഞെടുക്കുന്നതിന്.

▼ 5 Understanding their functions

5 Understanding their functions is an official topic in Module 1 of Tyre Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 5 Understanding their functions using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 5 understanding their functions should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- Explain design and production of solid tyre 3 Understanding Describe design of re-treading materials and definition/meaning. definition, steps, application. Technical terms English- definition.

▼ 2 Understanding re-treading process Content: Cycle tyres: design - components production - building (monoband and collapsible drum method) - curing. Cycle tube: design and production. Solid tyres: formulations and production - applications - advantages and disadvantages - compare solid tyre and pneumatic tyre. Re-treading process: hot and cold process - machinery. compound designs (truck tyre tread, passenger car tread, rubber cement, cushion gum for conventional and pre-cured. Comparison of Hot and Cold re - treading.

2 Understanding re-treading process Content: Cycle tyres: design - components production - building (monoband and collapsible drum method) - curing. Cycle tube: design and production. Solid tyres: formulations and production - applications - advantages and disadvantages - compare solid tyre and pneumatic tyre. Re-treading process: hot and cold process - machinery. compound designs (truck tyre tread, passenger car tread, rubber cement, cushion gum for conventional and pre-cured. Comparison of Hot and Cold re - treading. is an official topic in Module 3 of Tyre Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding re-treading process Content: Cycle tyres: design - components production - building (monoband and collapsible drum method) - curing. Cycle tube: design and production. Solid tyres: formulations and production - applications - advantages and disadvantages - compare solid tyre and pneumatic tyre. Re-treading process: hot and cold

process - machinery. compound designs (truck tyre tread, passenger car tread, rubber cement, cushion gum for conventional and pre-cured. Comparison of Hot and Cold re - treading. using standard technical terminology.

- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding re-treading process content: cycle tyres: design - components production - building (monoband and collapsible drum method) - curing. cycle tube: design and production. solid tyres: formulations and production - applications - advantages and disadvantages - compare solid tyre and pneumatic tyre. re-treading process: hot and cold process - machinery. compound designs (truck tyre tread, passenger car tread, rubber cement, cushion gum for conventional and pre-cured. comparison of hot and cold re - treading. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

MODULE 4

Generalize tyre and tube testing methods.

This module is presented from the official syllabus scope for Tyre Technology. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Generalize tyre and tube testing methods.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 4 Understanding compounds Outline non-destructive and destructive

4 Understanding compounds Outline non-destructive and destructive is an official topic in Module 4 of Tyre Technology. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding compounds Outline non-destructive and destructive using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding compounds outline non-destructive and destructive should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► Define or explain 3 Remembering pneumatic tyres. Explain different components of tyre and. (3 marks)

► Define or explain 5 Understanding their functions. (3 marks)

► Define or explain Describe basic tyre constructions.. (3 marks)

► Define or explain Outline composition of tyre. 4 Understanding
Content: History of pneumatic tyres. Statistics-production, consumption import and export of tyres. Major tyre manufacturing industries in India and abroad. Pneumatic tyres - definition - different components - functions. Different tyre construction - bias - radial - bias belted. Aspect ratio. Tyre size and dimension. Composition of tyre - elastomers - compounding ingredients (filler and chemicals) - tyre reinforcement. Requirements of tyre cord - different cords-cotton -rayon -nylon - polyester - glass - steel - aramid). Auxiliary materials. (3 marks)

Module 2

► Define or explain 6 Understanding components. (3 marks)

► Define or explain Compile adhesive treatments of tyre cords. (3 marks)

► **Define or explain Summarize tyre building and curing 4 Understanding Outline design and production of automobile. (3 marks)**

► **Define or explain 3 Understanding inner tube and flap Content: Production of bead unit - inner liner - carcass - belt - breaker - tread - chafer - compound design for each component. Tread patterns - lug - rib - semi lug. Adhesive treatment for tyre cords- rayon - nylon -polyester. Adhesive formulation for each tyre cords. Tyre building machine - different parts - bias and radial building machines. Building process of bias and radial tyres. Curing of tyres - BOM and Auto form press. PCI - Flat spotting - Aqua planning. Curing bag - functions - properties - formulation. Automobile inner tube -production - typical compound. Tyre flap - production - typical compound. Explain design and production of cycle tyre, cycle tube, solid tyre and. (3 marks)**

Module 3

► **Define or explain Outline design and production of cycle tyre. (3 marks)**

► **Define or explain Describe design and production of cycle tube. (3 marks)**

► **Define or explain Explain design and production of solid tyre 3 Understanding Describe design of re-treading materials and. (3 marks)**

► **Define or explain 2 Understanding re-treading process Content: Cycle tyres: design - components production - building (monoband and collapsible drum method) - curing. Cycle tube: design and production. Solid tyres: formulations and production - applications - advantages and disadvantages - compare solid tyre and pneumatic tyre. Re-treading process: hot and cold process - machinery. compound designs (truck tyre tread, passenger car tread, rubber cement, cushion gum for**

conventional and pre-cured. Comparison of Hot and Cold re - treading.. (3 marks)

Module 4

► **Define or explain 4 Understanding compounds Outline non-destructive and destructive. (3 marks)**

► **Define or explain 4 Understanding testing of pneumatic tyres and tubes. (3 marks)**

► **Define or explain Describe outdoor testing of pneumatic tyres. (3 marks)**

► **Define or explain Summarize testing of cycle tyre and tubes 4 Understanding Content: Testing of tyres - Nondestructive tests - dimension-size factor, tread arc width, non - skid depth, hardness, X-ray, IR, Ultra sonic, micro wave, holography. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **3 Remembering pneumatic tyres. Explain different components of tyre and.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **6 Understanding components.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **Outline design and production of cycle tyre.**

3-mark explanation: Explain one principle, process or comparison from this module.

Module 4

1-mark definition: State the meaning of **4 Understanding compounds Outline non-destructive and destructive.**

3-mark explanation: Explain one principle, process or comparison from

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
