

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 5093A

5 Credits: 4

Program Elective

Source-grounded

Injection Mould Design

□ To acquaint with various metals and operations carried out in plastic injection

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 5093A is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5093A.pdf from the uploaded official SITTTTR syllabus archive.

Course code and title: preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Polymer Technology
Course code	5093A
Course title	Injection Mould Design
Semester	5 Credits: 4
Course category	Program Elective
Periods per week	4 (L:4 T:0 P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

16 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- To acquaint with various metals and operations carried out in plastic injection mould making.
- To assimilate design and working principles of various components of plastic injection moulds.

Course outcomes

CO	Official outcome	Study level
CO1	15 Applying operations for injection mould making Explain various parts of an injection mould and	See official syllabus
CO2	15 Understanding operations involved in their construction Describe injection mould feed system and ejection	See official syllabus
CO3	14 Applying system	See official syllabus
CO4	Generalize parting surface and cooling systems of 14 Applying injection mould	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3 3
CO2	CO2 3 3
CO3	CO3 3 3
CO4	CO4 3 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	making	4	As specified
Module 2	their construction	4	As specified
Module 3	Describe injection mould feed system and ejection system	4	As specified
Module 4	Generalize parting surface and cooling systems of injection mould	4	As specified

MODULE 1**making**

This module is presented from the official syllabus scope for Injection Mould Design. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: making
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 2 Remembering steel

2 Remembering steel is an official topic in Module 1 of Injection Mould Design. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Remembering steel using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 remembering steel should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 2 Remembering steel means in the official course context
Study lens	Principle → components or stages → result → application

Aspect	What to prepare
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- 2 Remembering steel
 definition/meaning .
 , steps, application . Technical terms English-
 .

▼ Familiarize injection mould making steel 2 Understanding Illustrate important machine tools and their

Familiarize injection mould making steel 2 Understanding Illustrate important machine tools and their is an official topic in Module 1 of Injection Mould Design. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Familiarize injection mould making steel 2 Understanding Illustrate important machine tools and their using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, familiarize injection mould making steel 2 understanding illustrate important machine tools and their should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Ejector plate assembly return systems, Stop pins. Ejection techniques - different types, Ejection from fixed half. Sprue pullers - Type A & B.

3 Understanding mechanisms and ejection techniques Define feed system - sprue, runner and gate. Runner cross-sectional shapes and efficiency. Runner size and layouts. Gates - Need for small cross-sectional area, Position of gate, Balanced gating, Types of gates. Ejection - Ejector grid and designs, Ejector plate assembly - Ejector plate & Retaining plate, Ejector plate actuation methods, Guiding and supporting of ejector plate assembly, Ejector rod and ejector rod bush - designs. Ejector plate assembly return systems, Stop pins. Ejection techniques - different types, Ejection from fixed half. Sprue pullers - Type A & B. is an official topic in Module 3 of Injection Mould Design. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding mechanisms and ejection techniques
Define feed system - sprue, runner and gate. Runner cross-sectional shapes

and efficiency. Runner size and layouts. Gates – Need for small cross-sectional area, Position of gate, Balanced gating, Types of gates. Ejection – Ejector grid and designs, Ejector plate assembly - Ejector plate & Retaining plate, Ejector plate actuation methods, Guiding and supporting of ejector plate assembly, Ejector rod and ejector rod bush – designs. Ejector plate assembly return systems, Stop pins. Ejection techniques – different types, Ejection from fixed half. Sprue pullers – Type A & B. using standard technical terminology.

- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding mechanisms and ejection techniques define feed system – sprue, runner and gate. runner cross-sectional shapes and efficiency. runner size and layouts. gates – need for small cross-sectional area, position of gate, balanced gating, types of gates. ejection – ejector grid and designs, ejector plate assembly - ejector plate & retaining plate, ejector plate actuation methods, guiding and supporting of ejector plate assembly, ejector rod and ejector rod bush – designs. ejector plate assembly return systems, stop pins. ejection techniques – different types, ejection from fixed half. sprue pullers – type a & b. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Understanding mechanisms and ejection techniques Define feed system – sprue, runner and gate. Runner cross-sectional shapes and efficiency. Runner size and layouts. Gates – Need for small cross-sectional area, Position of gate, Balanced gating, Types of gates. Ejection – Ejector grid and designs, Ejector plate assembly - Ejector plate & Retaining plate, Ejector plate actuation methods, Guiding and supporting of ejector plate assembly, Ejector rod and ejector rod bush – designs. Aspect	What to prepare
	techniques – different types, Ejection from fixed half. Sprue pullers – Type A & B. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- 3 Understanding mechanisms and ejection techniques Define feed system – sprue, runner and gate. Runner cross-sectional shapes and efficiency. Runner size and layouts. Gates – Need for small cross-sectional area, Position of gate, Balanced gating, Types of gates. Ejection – Ejector grid and designs, Ejector plate assembly - Ejector plate & Retaining plate, Ejector plate actuation methods, Guiding and supporting of ejector plate assembly, Ejector rod and ejector rod bush – designs. Ejector plate assembly return systems, Stop pins. Ejection techniques – different types, Ejection from fixed half. Sprue pullers – Type A & B. definition/meaning. steps, application. Technical terms English- Malayalam.

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the

Malayalam support notes.

MODULE 4

Generalize parting surface and cooling systems of injection mould

This module is presented from the official syllabus scope for Injection Mould Design. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Generalize parting surface and cooling systems of injection mould
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ Illustrate various parting surface and relief 2 Understanding Explain the significance of mould surface

Illustrate various parting surface and relief 2 Understanding Explain the significance of mould surface is an official topic in Module 4 of Injection Mould Design. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Illustrate various parting surface and relief 2 Understanding Explain the significance of mould surface using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, illustrate various parting surface and relief 2 understanding explain the significance of mould surface should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Illustrate various parting surface and relief 2 Understanding Explain the significance of mould surface means in the official course context

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► Define or explain 2 Remembering steel. (3 marks)

► Define or explain Familiarize injection mould making steel 2
Understanding Illustrate important machine tools and their. (3 marks)

► Define or explain 9 Understanding operations used in Injection mould making Outline machining operations required for a. (3 marks)

► Define or explain 2 Applying mould plate preparation Classification of metals - ferrous and non-ferrous. Composition of plain carbon steel. Alloy steel - Mould steel-types - requirements. List important machine tools used for injection mould making. Identify parts of a Lathe using line diagram. Lathe operations in brief; turning (different types), facing, parting off, forming, thread cutting, knurling, drilling, reaming, boring. Mode of operation of planer and shaper. Comparison between planer and shaper. Cylindrical grinding machine - sketch and mode of operation. Basic machine tool operations for manufacturing a simple mould plate. Explain various parts of an injection mould and operations involved in. (3 marks)

Module 2

► Define or explain 2 Remembering injection mould general terms. (3 marks)

► **Define or explain Illustrate core and cavity making techniques 6 Understanding Familiarize different parts of an ideal injection. (3 marks)**

► **Define or explain 6 Understanding mould, ancillary parts Outline steps involved in Bench fitting of. (3 marks)**

► **Define or explain 1 Understanding Injection mould. Understand the terms; Injection mould clamping unit - fixed & moving halves, tie bar & bush. Terms relating Injection moulds - impression, cavity and core. Cavity and core making techniques; Casting, Electro - deposition, Cold hobbing, Pressure casting. Integer and insert type mould. Bolsters - requirements and classification. Types of cavity and core inserts. Sketch of an ideal injection mould and label its parts. Ancillary items; Guide bush & Guide pillar - functions, types, location and positioning. Sprue bush - function and types. Register ring - function and types. Steps involved in Bench fitting of an Injection mould.. (3 marks)**

Module 3

► **Define or explain Identify Injection mould feed system 2 Remembering Illustrate runner and gate in terms of types and. (3 marks)**

► **Define or explain 6 Understanding designs Explain different parts of an Ejector grid and. (3 marks)**

► **Define or explain 3 Understanding Ejector plate assembly Illustrate the ejector plate actuation-return. (3 marks)**

► **Define or explain 3 Understanding mechanisms and ejection techniques Define feed system - sprue, runner and gate. Runner cross-sectional shapes and efficiency. Runner size and layouts. Gates - Need for small cross-sectional area, Position of gate, Balanced gating, Types of gates. Ejection - Ejector grid and designs, Ejector plate assembly - Ejector plate & Retaining plate, Ejector plate actuation methods,**

Guiding and supporting of ejector plate assembly, Ejector rod and ejector rod bush - designs. Ejector plate assembly return systems, Stop pins. Ejection techniques - different types, Ejection from fixed half. Sprue pullers - Type A & B.. (3 marks)

Module 4

► **Define or explain Illustrate various parting surface and relief 2 Understanding Explain the significance of mould surface. (3 marks)**

► **Define or explain 2 Understanding balancing and venting Explain various cooling systems adopted in. (3 marks)**

► **Define or explain 8 Understanding Injection moulds Explain the water connections and seals used in. (3 marks)**

► **Define or explain 2 Understanding mould cooling Parting surface - Classification, Non-flat parting surfaces - Stepped, Profiled, Angled & Complex edge forms. Balancing of mould surfaces, Relief of parting surfaces, Mould venting. Mould cooling - Factors deciding mould temperature. Types of cooling systems - Integer mould plates, Integer core plates, Insert-Bolster assembly, Cooling other mould parts - Stripper plate, Valve type ejector head, Sprue bush. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **2 Remembering steel**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **2 Remembering injection mould general terms**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **Identify Injection mould feed system 2 Remembering Illustrate runner and gate in terms of types and**.

3-mark explanation: Explain one principle, process or comparison from

Module 4

1-mark definition: State the meaning of **Illustrate various parting surface and relief 2 Understanding Explain the significance of mould surface**.

3-mark explanation: Explain one principle, process or comparison from

this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
