

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 5243B

5 Credits: 4

Program Elective

Source-grounded

Programming in C

- To provide a basic knowledge in C Programming.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 5243B is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5243B.pdf from the uploaded official SITTTTR syllabus archive.

Course code and title: preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Biomedical Engineering
Course code	5243B
Course title	Programming in C
Semester	5 Credits: 4
Course category	Program Elective
Periods per week	4 (L:3 T:1 P:0) Periods per semester : 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

22 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- To provide a basic knowledge in C Programming.
- To enhance programming skills using Control blocks, Looping, String Manipulation, and functions to solve real world problems.
- To make capable to solve real-life programming tasks using C.

Course outcomes

CO	Official outcome	Study level
CO1	13 Applying programming. Make use of iterative control structures and arrays	See official syllabus
CO2	15 Applying in programs. Develop programs using pointers and strings to	See official syllabus
CO3	15 Applying solve problems more efficiently. Make use of functions to solve problems	See official syllabus
CO4	15 Applying effectively	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3
CO2	CO2 3
CO3	CO3 3
CO4	CO4 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Make use of programming concepts with C programming.	5	As specified
Module 2	Make use of iterative control structures and arrays in programs.	6	As specified
Module 3	efficiently.	5	As specified
Module 4	Make use of functions to solve problems effectively	6	As specified

MODULE 1

Make use of programming concepts with C programming.

This module is presented from the official syllabus scope for Programming in C. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Make use of programming concepts with C programming.
- Official duration: As specified
- Official topic entries captured: 5
- The full source excerpt is preserved below for coverage checking.

▼ Understand structure of a C program 1 Understanding. Use the terms Keywords, Variables, Constants,

Understand structure of a C program 1 Understanding. Use the terms Keywords, Variables, Constants, is an official topic in Module 1 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Understand structure of a C program 1 Understanding. Use the terms Keywords, Variables, Constants, using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, understand structure of a c program 1 understanding. use the terms keywords, variables, constants, should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Understand structure of a C program 1 Understanding. Use the terms Keywords, Variables, Constants, means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- Understand structure of a C program 1 Understanding. Use the terms Keywords, Variables, Constants, definition/meaning. , steps, application . Technical terms English- .

▼ 3 Applying Data types and type qualifiers

3 Applying Data types and type qualifiers is an official topic in Module 1 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Applying Data types and type qualifiers using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 applying data types and type qualifiers should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Applying Data types and type qualifiers means in the official course context

Aspect	What to prepare
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-3 Applying Data types and type qualifiers
 definition/meaning .
 , steps, application . Technical terms English- .

▼ Identify output and input functions

Identify output and input functions is an official topic in Module 1 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Identify output and input functions using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, identify output and input functions should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Identify output and input functions means in the official course context

Aspect	What to prepare
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-ഓർക്കുക Identify output and input functions
 ഓർക്കുക definition/meaning ഓർക്കുക. ഓർക്കുക ഓർക്കുക
 ഓർക്കുക, steps, application ഓർക്കുക ഓർക്കുക. Technical terms
 English-ഓർക്കുക ഓർക്കുക.

▼ Identify operators

Identify operators is an official topic in Module 1 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Identify operators using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, identify operators should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Identify operators means in the official course context
Study lens	Principle → components or stages → result → application

Aspect	What to prepare
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-ഓപ്പറേറ്ററുകൾ Identify operators ഓപ്പറേറ്ററുകളുടെ definition/meaning ഓപ്പറേറ്ററുകളുടെ അർത്ഥം. ഓപ്പറേറ്ററുകൾ ഉപയോഗിക്കുന്ന steps, application ഓപ്പറേറ്ററുകൾ ഉപയോഗിക്കുന്ന രീതി. Technical terms English-ഓപ്പറേറ്ററുകൾ.

▼ Identify type casting 2 Applying Introduction to Programming concepts: Structure of a C program - Keyword, Variables, Constants, Data types and type qualifiers. Output and input functions, Operators - Arithmetic, relational, logical, increment/decrement, conditional, assignment, bit wise, Assignment, Conditional and type casting.

Identify type casting 2 Applying Introduction to Programming concepts: Structure of a C program - Keyword, Variables, Constants, Data types and type qualifiers. Output and input functions, Operators - Arithmetic, relational, logical, increment/decrement, conditional, assignment, bit wise, Assignment, Conditional and type casting. is an official topic in Module 1 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Identify type casting 2 Applying Introduction to Programming concepts: Structure of a C program - Keyword, Variables, Constants, Data types and type qualifiers. Output and input functions, Operators - Arithmetic, relational, logical, increment/decrement, conditional, assignment, bit wise, Assignment, Conditional and type casting. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.

- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, identify type casting 2 applying introduction to programming concepts: structure of a c program - keyword, variables, constants, data types and type qualifiers. output and input functions, operators - arithmetic, relational, logical, increment/decrement, conditional, assignment, bit wise, assignment, conditional and type casting. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Identify type casting 2 Applying Introduction to Programming concepts: Structure of a C program - Keyword, Variables, Constants, Data types and type qualifiers. Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-□□ Identify type casting 2 Applying Introduction to Programming concepts: Structure of a C program - Keyword, Variables, Constants, Data types and type qualifiers. Output and input

functions, Operators - Arithmetic, relational, logical, increment/decrement, conditional, assignment, bit wise, Assignment, Conditional and type casting.

പ്രോഗ്രാമിംഗ് ഫങ്ഷനുകളുടെ definition/meaning. പ്രോഗ്രാമിംഗ് ഓപ്പറേറ്ററുകൾ, steps, application. Technical terms English-ൽ പ്രോഗ്രാമിംഗ് ഓപ്പറേറ്ററുകൾ.

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 2

Make use of iterative control structures and arrays in programs.

This module is presented from the official syllabus scope for Programming in C. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Make use of iterative control structures and arrays in programs.
- Official duration: As specified
- Official topic entries captured: 6
- The full source excerpt is preserved below for coverage checking.

▼ 2 Applying nested if and switch Identify loop structures - while, do-while, for

2 Applying nested if and switch Identify loop structures - while, do-while, for is an official topic in Module 2 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Applying nested if and switch Identify loop structures - while, do-while, for using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 applying nested if and switch identify loop structures - while, do-while, for should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 2 Applying nested if and switch Identify loop structures – while, do-while, for means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2- 2 Applying nested if and switch Identify loop structures – while, do-while, for definition/meaning . . . , steps, application Technical terms English-

▼ 2 Applying and nested loops. Make use of unconditional control statements -

2 Applying and nested loops. Make use of unconditional control statements - is an official topic in Module 2 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Applying and nested loops. Make use of unconditional control statements - using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 applying and nested loops. make use of unconditional control statements - should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 2 Applying and nested loops. Make use of unconditional control statements – means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2- 2 Applying and nested loops. Make use of unconditional control statements – definition/meaning, steps, application. Technical terms English- .

▼ 2 Applying break, continue and goto Identify one dimensional array operations -

2 Applying break, continue and goto Identify one dimensional array operations - is an official topic in Module 2 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Applying break, continue and goto Identify one dimensional array operations - using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 applying break, continue and goto identify one dimensional array operations - should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

addition, subtraction, increment, decrement 3 Applying and comparison. Develop programs for accessing strings using is an official topic in Module 3 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify addition, subtraction, increment, decrement 3 Applying and comparison. Develop programs for accessing strings using using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, addition, subtraction, increment, decrement 3 applying and comparison. develop programs for accessing strings using should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

▼ 3 Applying pointers

3 Applying pointers is an official topic in Module 3 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Applying pointers using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 applying pointers should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Applying pointers means in the official course context
Study lens	Principle → components or stages → result → application

Aspect	What to prepare
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- 3 Applying pointers ഫലപ്രദമായ രീതിയിൽ definition/meaning നൽകുക. ഫലപ്രദമായ രീതിയിൽ, steps, application നൽകുക. Technical terms English-ൽ നൽകുക.

▼ Utilize gets() and puts() functions 3 Applying Use built in string handling functions like

Utilize gets() and puts() functions 3 Applying Use built in string handling functions like is an official topic in Module 3 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Utilize gets() and puts() functions 3 Applying Use built in string handling functions like using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, utilize gets() and puts() functions 3 applying use built in string handling functions like should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Malayalam support: Module 3- 4 Applying strcpy(), strlen(), strcat(), strcmp(), strrev() Pointers and string operations: Basics of Pointers, Pointers arithmetic operations - addition, subtraction, increment, decrement, comparison, accessing strings using pointers, gets() and Puts() functions, String handling functions. definition/meaning. steps, application. Technical terms English- Malayalam.

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 4

Make use of functions to solve problems effectively

This module is presented from the official syllabus scope for Programming in C. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Make use of functions to solve problems effectively
- Official duration: As specified
- Official topic entries captured: 6
- The full source excerpt is preserved below for coverage checking.

▼ Explain functions, types and advantages

Explain functions, types and advantages is an official topic in Module 4 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Explain functions, types and advantages using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, explain functions, types and advantages should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

▼ Identify different types of functions 2 Applying Make use of call by value and call by

Identify different types of functions 2 Applying Make use of call by value and call by is an official topic in Module 4 of Programming in C. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Identify different types of functions 2 Applying Make use of call by value and call by using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, identify different types of functions 2 applying make use of call by value and call by should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain Understand structure of a C program 1 Understanding. Use the terms Keywords, Variables, Constants,. (3 marks)**

► **Define or explain 3 Applying Data types and type qualifiers. (3 marks)**

► **Define or explain Identify output and input functions. (3 marks)**

► **Define or explain Identify operators. (3 marks)**

Module 2

► **Define or explain 2 Applying nested if and switch Identify loop structures - while, do-while, for. (3 marks)**

► **Define or explain 2 Applying and nested loops. Make use of unconditional control statements -. (3 marks)**

► **Define or explain 2 Applying break, continue and goto Identify one dimensional array operations -. (3 marks)**

► **Define or explain 3 Applying. insertion, deletion, searching, sorting Use two dimensional array deceleration and. (3 marks)**

Module 3

► Define or explain Use pointer concepts in programming 2 Applying Identify pointer arithmetic operations -. (3 marks)

► Define or explain addition, subtraction, increment, decrement 3 Applying and comparison. Develop programs for accessing strings using. (3 marks)

► Define or explain 3 Applying pointers. (3 marks)

► Define or explain Utilize gets() and puts() functions 3 Applying Use built in string handling functions like. (3 marks)

Module 4

► Define or explain Explain functions, types and advantages. (3 marks)

► Define or explain Illustrate structure of a user defined functions 3 Understanding Make use of function prototype, function call,. (3 marks)

► Define or explain 3 Applying arguments, return type. (3 marks)

► Define or explain Identify different types of functions 2 Applying Make use of call by value and call by. (3 marks)

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **Understand structure of a C program 1 Understanding. Use the terms Keywords, Variables, Constants,.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **2 Applying nested if and switch Identify loop structures - while, do-while, for.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **Use pointer concepts in programming 2 Applying Identify pointer arithmetic operations -.**

Module 4

1-mark definition: State the meaning of **Explain functions, types and advantages.**

3-mark explanation: Explain one principle, process or comparison from

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
