

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 5381

5 Credits: 4

Program Core

Source-grounded

Fundamentals of Virtual Reality

- Outline principles of geometric modeling, transformations, and generic VR systems.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 5381 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5381.pdf from the uploaded official SITTTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Artificial Intelligence
Course code	5381
Course title	Fundamentals of Virtual Reality
Semester	5 Credits: 4
Course category	Program Core
Periods per week	4 (L:4 T:0 P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

19 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- Outline principles of geometric modeling, transformations, and generic VR systems.
- Demonstrate proficiency in animating objects, creating transitions, and simulating
- physical interactions in virtual environments.
- Understand the components, functionalities, and applications of augmented reality
- (AR) systems within VR contexts.

Course outcomes

CO	Official outcome	Study level
CO1	Understand Virtual Reality Fundamentals 14 Understanding	See official syllabus
CO2	Outline geometric modeling, transformations, and 15 Understanding generic VR system principles. Demonstrate animation of objects, create	See official syllabus
CO3	transitions, and simulate physical interactions in 15 Understanding virtual environments.	See official syllabus
CO4	Understand AR system components,functionalities 14 Understanding and applications.	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3
CO2	CO2 3
CO3	CO3 3

Row	Extracted official mapping
CO4	CO4 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Understand Virtual Reality Fundamentals	4	As specified
Module 2	Outline geometric modeling, transformations, and generic VR system	4	As specified
Module 3	physical interactions in virtual environments.	5	As specified
Module 4	Understand AR system components, functionalities and applications.	6	As specified

MODULE 1

Understand Virtual Reality Fundamentals

This module is presented from the official syllabus scope for Fundamentals of Virtual Reality. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Understand Virtual Reality Fundamentals
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 3 Understanding and Virtual Environment Outline the historical development of Virtual

3 Understanding and Virtual Environment Outline the historical development of Virtual is an official topic in Module 1 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding and Virtual Environment Outline the historical development of Virtual using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding and virtual environment outline the historical development of virtual should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 3 Understanding and Virtual Environment Outline the historical development of Virtual means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-3 Understanding and Virtual Environment Outline the historical development of Virtual definition/meaning application Technical terms English- Malayalam.

▼ 2 Understanding Reality Explain the principles of 3D computer

2 Understanding Reality Explain the principles of 3D computer is an official topic in Module 1 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding Reality Explain the principles of 3D computer using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding reality explain the principles of 3d computer should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare

Aspect	What to prepare
Definition/identity	What 2 Understanding Reality Explain the principles of 3D computer means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-2 Understanding Reality Explain the principles of 3D computer definition/meaning. steps, application. Technical terms English-.

▼ 4 Understanding graphics Illustrate basic 3D modeling techniques to

4 Understanding graphics Illustrate basic 3D modeling techniques to is an official topic in Module 1 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding graphics Illustrate basic 3D modeling techniques to using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding graphics illustrate basic 3d modeling techniques to should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

► Official syllabus detail and terminology (expand in digital version)

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 2

Outline geometric modeling, transformations, and generic VR system

This module is presented from the official syllabus scope for Fundamentals of Virtual Reality. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Outline geometric modeling, transformations, and generic VR system
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ geometric modeling techniques used in 3 Understanding Virtual Environments (VE). Illustrate frames of reference and modeling

geometric modeling techniques used in 3 Understanding Virtual Environments (VE). Illustrate frames of reference and modeling is an official topic in Module 2 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify geometric modeling techniques used in 3 Understanding Virtual Environments (VE). Illustrate frames of reference and modeling using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, geometric modeling techniques used in 3 understanding virtual environments (ve). illustrate frames of reference and modeling should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What geometric modeling techniques used in 3 Understanding Virtual Environments (VE). Illustrate frames of reference and modeling means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2-എന്നു് geometric modeling techniques used in 3 Understanding Virtual Environments (VE). Illustrate frames of reference and modeling ഏകദേശം definition/meaning ഏകദേശം. ഏകദേശം ഏകദേശം ഏകദേശം, steps, application ഏകദേശം ഏകദേശം ഏകദേശം. Technical terms English-എന്നു് ഏകദേശം ഏകദേശം.

▼ transformations to create and manipulate 4 Understanding objects within VR. Identify techniques such as instances, picking, Understanding

transformations to create and manipulate 4 Understanding objects within VR. Identify techniques such as instances, picking, Understanding is an official topic in Module 2 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify transformations to create and manipulate 4 Understanding objects within VR. Identify techniques such as instances, picking, Understanding using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, transformations to create and manipulate 4 understanding objects within vr. identify techniques such as instances, picking, understanding should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What transformations to create and manipulate 4 Understanding objects within VR. Identify techniques such as instances, picking, Understanding means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2- $\square\square$ transformations to create and manipulate 4 Understanding objects within VR. Identify techniques such as instances, picking, Understanding $\square\square\square\square\square\square\square\square\square\square$ $\square\square\square\square$ definition/meaning $\square\square\square\square\square\square\square\square\square\square$. $\square\square\square\square\square$ $\square\square\square\square\square$ $\square\square\square\square\square\square$, steps, application $\square\square\square\square\square$ $\square\square\square\square\square\square\square\square$. Technical terms English- $\square$ $\square\square\square\square$ $\square\square\square\square\square\square\square\square$.

▼ 4 flying, scaling the VE, and collision detection. Outline the components of a generic VR

4 flying, scaling the VE, and collision detection. Outline the components of a generic VR is an official topic in Module 2 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 flying, scaling the VE, and collision detection. Outline the components of a generic VR using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 flying, scaling the ve, and collision detection. outline the components of a generic vr should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

രേഖാചിത്രം.

▼ 3 in Virtual Environments

3 in Virtual Environments is an official topic in Module 3 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 in Virtual Environments using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 in virtual environments should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 in Virtual Environments means in the official course context
Study lens	Principle → components or stages → result → application

Aspect	What to prepare
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- 3 in Virtual Environments
 definition/meaning . steps, application . Technical terms English-
 .

▼ **Outline elastic collision simulations to objects 3 Understanding Animating the Virtual Environment: The dynamics of numbers - Linear and Non-linear interpolation - The animation of objects - linear and nonlinear translation - shape & object inbetweening - free-from deformation - particle system. Physical Simulation : Objects falling in a gravitational field - Rotating wheels - Elastic collisions - projectiles - simple pendulum - springs - Flight dynamics of an aircraft.**

Outline elastic collision simulations to objects 3 Understanding Animating the Virtual Environment: The dynamics of numbers - Linear and Non-linear interpolation - The animation of objects - linear and nonlinear translation - shape & object inbetweening - free-from deformation - particle system. Physical Simulation : Objects falling in a gravitational field - Rotating wheels - Elastic collisions - projectiles - simple pendulum - springs - Flight dynamics of an aircraft. is an official topic in Module 3 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Outline elastic collision simulations to objects 3 Understanding Animating the Virtual Environment: The dynamics of numbers - Linear and Non-linear interpolation - The animation of objects - linear and nonlinear translation - shape & object inbetweening - free-from deformation - particle system. Physical Simulation : Objects falling in a gravitational field - Rotating wheels - Elastic collisions - projectiles - simple

pendulum – springs – Flight dynamics of an aircraft. using standard technical terminology.

- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, outline elastic collision simulations to objects 3 understanding animating the virtual environment: the dynamics of numbers – linear and non-linear interpolation - the animation of objects – linear and nonlinear translation - shape & object inbetweening – free-from deformation – particle system. physical simulation : objects falling in a gravitational field – rotating wheels – elastic collisions – projectiles – simple pendulum – springs – flight dynamics of an aircraft. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

MODULE 4

Understand AR system components, functionalities and applications.

This module is presented from the official syllabus scope for Fundamentals of Virtual Reality. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Understand AR system components, functionalities and applications.
- Official duration: As specified
- Official topic entries captured: 6
- The full source excerpt is preserved below for coverage checking.

▼ Explain AR Taxonomy and Technologies

Explain AR Taxonomy and Technologies is an official topic in Module 4 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Explain AR Taxonomy and Technologies using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, explain ar taxonomy and technologies should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

▼ 2 augmented reality (AR) systems. Outline tracking methods, visualization Understanding

2 augmented reality (AR) systems. Outline tracking methods, visualization Understanding is an official topic in Module 4 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 augmented reality (AR) systems. Outline tracking methods, visualization Understanding using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 augmented reality (ar) systems. outline tracking methods, visualization understanding should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

▼ 3 techniques, and interaction models. Explain advanced augmented reality (AR)

3 techniques, and interaction models. Explain advanced augmented reality (AR) is an official topic in Module 4 of Fundamentals of Virtual Reality. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 techniques, and interaction models. Explain advanced augmented reality (AR) using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 techniques, and interaction models. explain advanced augmented reality (ar) should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain 3 Understanding and Virtual Environment Outline the historical development of Virtual. (3 marks)**

► **Define or explain 2 Understanding Reality Explain the principles of 3D computer. (3 marks)**

► **Define or explain 4 Understanding graphics Illustrate basic 3D modeling techniques to. (3 marks)**

► **Define or explain 5 Understanding create virtual objects and environments. time computer graphics -Flight Simulation - Virtual environments -requirement - benefits of virtual reality Historical development of VR : Scientific Landmark. 3D Computer Graphics: The Virtual world space - positioning the virtual observer - the perspective projection - human vision - stereo perspective projection - 3D clipping - Colour theory - Simple 3D modeling- Illumination models - Reflection models - Shading algorithms- Radiosity - Hidden Surface Removal - 1-Stereographic image.. (3 marks)**

Module 2

► **Define or explain geometric modeling techniques used in 3 Understanding Virtual Environments (VE). Illustrate frames of reference and modeling. (3 marks)**

► **Define or explain transformations to create and manipulate 4 Understanding objects within VR. Identify techniques such as instances, picking, Understanding. (3 marks)**

► **Define or explain 4 flying, scaling the VE, and collision detection. Outline the components of a generic VR. (3 marks)**

► **Define or explain system, including the virtual environment, 4 Understanding computer environment, and VR technology. Geometric Modeling: From 2D to 3D - 3D space curves - 3D boundary representation Geometrical Transformations: Frames of reference - Modeling transformations - Instances -Picking - Flying - Scaling the VE - Collision detection Generic VR system: The virtual environment - the Computer environment - VR Technology - Model of interaction - VR Systems Demonstrate animation of objects, create transitions, and simulate. (3 marks)**

Module 3

► **Define or explain 3 methods to animate objects. Explain animation techniques for translating Understanding. (3 marks)**

► **Define or explain 3 objects both linearly and nonlinearly. Demonstrate shape and object inbetweening Understanding. (3 marks)**

► **Define or explain 3 techniques to create transitions Describe the methods of Physical Simulation Understanding. (3 marks)**

► **Define or explain 3 in Virtual Environments. (3 marks)**

Module 4

► **Define or explain Explain AR Taxonomy and Technologies. (3 marks)**

► **Define or explain Differentiate AR and VR 2 Understanding Outline the components and functionalities of Understanding. (3 marks)**

► **Define or explain 2 augmented reality (AR) systems. Outline tracking methods, visualization Understanding. (3 marks)**

► **Define or explain 3 techniques, and interaction models. Explain advanced augmented reality (AR). (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **3 Understanding and Virtual Environment Outline the historical development of Virtual**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **geometric modeling techniques used in 3 Understanding Virtual Environments (VE). Illustrate frames of reference and modeling**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **3 methods to animate objects**.

Module 4

1-mark definition: State the meaning of **Explain AR Taxonomy and Technologies**.

Explain animation techniques for translating Understanding.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION**Exam checklist****Before writing**

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
