

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 5461

5 Credits: 4

Program Core

Source-grounded

Safety in Process Industries and

- To understand ignition hazards and dust control in process industries.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 5461 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5461.pdf from the uploaded official SITTTTR syllabus archive. **Course code and title:** preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Fire Technology and Safety
Course code	5461
Course title	Safety in Process Industries and
Semester	5 Credits: 4
Course category	Program Core
Periods per week	4 (L:3 T:1 P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

16 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES**Objectives, outcomes and mapping****Course objectives**

- To understand ignition hazards and dust control in process industries.
- To explore electrostatic hazards and their control in powder handling.
- To learn safety measures related to power handling, particularly in hazardous environments involving electricity.
- To study best practices for handling industrial power and ensuring the safety of

Course outcomes

CO	Official outcome	Study level
CO1	14 Understanding dust control measures. Analyze electrostatic hazards, types of discharge,	See official syllabus
CO2	15 Analyzing and control in powder handling. Learn safety measures in power handling, particularly	See official syllabus
CO3	15 Applying in high-risk situations.. Apply safety standards to prevent electrical	See official syllabus
CO4	14 Applying accidents in power handling environments.	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3 2
CO2	CO2 3 3
CO3	CO3 3 3 2

Row	Extracted official mapping
CO4	CO4 3 3 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Understand ignition hazards in process industries and dust control	4	As specified
Module 2	handling.	4	As specified
Module 3	situations.	4	As specified
Module 4	environments	4	As specified

MODULE 1

Understand ignition hazards in process industries and dust control

This module is presented from the official syllabus scope for Safety in Process Industries and. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Understand ignition hazards in process industries and dust control
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 3 Understanding powder dispersion, and spark generation..

Characteristics of flammable gases, solvent vapor

3 Understanding powder dispersion, and spark generation.. Characteristics of flammable gases, solvent vapor is an official topic in Module 1 of Safety in Process Industries and. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding powder dispersion, and spark generation.. Characteristics of flammable gases, solvent vapor using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding powder dispersion, and spark generation.. characteristics of flammable gases, solvent vapor should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Understanding powder dispersion, and spark generation.. Characteristics of flammable gases, solvent vapor means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-3 Understanding powder dispersion, and spark generation.. Characteristics of flammable gases, solvent vapor
 പൊടി വിതരണം, ത്വരണശേഷി, definition/meaning പൊടി വിതരണം, ത്വരണശേഷി
 പൊടി വിതരണം, steps, application പൊടി വിതരണം, ത്വരണശേഷി. Technical terms

▼ 4 Understanding clouds, and exothermic and endothermic reactions. Dust hazards: types, exposure, and dispersion;

4 Understanding clouds, and exothermic and endothermic reactions. Dust hazards: types, exposure, and dispersion; is an official topic in Module 1 of Safety in Process Industries and. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding clouds, and exothermic and endothermic reactions. Dust hazards: types, exposure, and dispersion; using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding clouds, and exothermic and endothermic reactions. dust hazards: types, exposure, and dispersion; should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 4 Understanding clouds, and exothermic and endothermic reactions. Dust hazards: types, exposure, and dispersion; means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-4 Understanding clouds, and exothermic and endothermic reactions. Dust hazards: types, exposure, and dispersion; definition/meaning. Steps, application. Technical terms English- Malayalam.

▼ 4 Understanding control strategies and monitoring techniques.

Control of dust at the source, occupational

4 Understanding control strategies and monitoring techniques. Control of dust at the source, occupational is an official topic in Module 1 of Safety in Process Industries and. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding control strategies and monitoring techniques. Control of dust at the source, occupational using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding control strategies and monitoring techniques. control of dust at the source, occupational should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Study points

- Define or identify 4 Applying safety protocols in power handling. Overview of electrical hazards in industrial settings. Identifying and controlling electrical faults. Fire safety in power handling systems, including prevention of electrical fires. Apply safety standards to prevent electrical accidents in power handling using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 applying safety protocols in power handling. overview of electrical hazards in industrial settings. identifying and controlling electrical faults. fire safety in power handling systems, including prevention of electrical fires. apply safety standards to prevent electrical accidents in power handling should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 4 Applying safety protocols in power handling. Overview of electrical hazards in industrial settings. Identifying and controlling electrical faults. Fire safety in power handling systems, including prevention of electrical fires. Apply safety standards to prevent electrical accidents in power handling means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- 4 Applying safety protocols in power handling. Overview of electrical hazards in industrial settings. Identifying and controlling electrical faults. Fire safety in power handling systems, including prevention of electrical fires. Apply safety standards to prevent electrical accidents in power handling
 definition/meaning
 , steps,

application ഏകദേശം അനുസരിച്ചുള്ള അളവുകൾ. Technical terms English-ൽ അളവുകൾ
അനുസരിച്ചുള്ളവ.

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 4

environments

This module is presented from the official syllabus scope for Safety in Process Industries and. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: environments
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 3 Applying environments, including isolation and grounding methods. Emergency procedures and safety measures in case

3 Applying environments, including isolation and grounding methods. Emergency procedures and safety measures in case is an official topic in Module 4 of Safety in Process Industries and. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Applying environments, including isolation and grounding methods. Emergency procedures and safety measures in case using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 applying environments, including isolation and grounding methods. emergency procedures and safety measures in case should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Applying environments, including isolation and grounding methods. Emergency procedures and safety measures in case means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4- 3 Applying environments, including isolation and grounding methods. Emergency procedures and safety measures in case of fire. definition/meaning. steps, application. Technical terms English- Malayalam.

▼ 4 Applying of electrical accidents. Electrical protective systems: safety protocols and

4 Applying of electrical accidents. Electrical protective systems: safety protocols and is an official topic in Module 4 of Safety in Process Industries and. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Applying of electrical accidents. Electrical protective systems: safety protocols and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 applying of electrical accidents. electrical protective systems: safety protocols and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain 3 Understanding powder dispersion, and spark generation.. Characteristics of flammable gases, solvent vapor. (3 marks)**

► **Define or explain 4 Understanding clouds, and exothermic and endothermic reactions. Dust hazards: types, exposure, and dispersion;. (3 marks)**

► **Define or explain 4 Understanding control strategies and monitoring techniques. Control of dust at the source, occupational. (3 marks)**

► **Define or explain diseases, housekeeping, and environmental 3 Applying protection. Ignition hazards in powder handling and dust generation. Characterization and control of flammable gases and vapor clouds. Dust types and their control in industrial operations. Occupational diseases and the importance of safety measures in process industries. Analyze electrostatic hazards, types of discharge, and control in powder. (3 marks)**

Module 2

► **Define or explain 4 Understanding release, and types of discharge. Electrostatic discharge in powder handling. (3 marks)**

► **Define or explain 3 Analyzing operations and its impact.. (3 marks)**

► **Define or explain Health and safety risks associated with dust in 4 Analyzing industries such as chemicals, pesticides, and metal powders.. (3 marks)**

► **Define or explain 4 Applying Hazard identification and safety standards for industries handling dust and powder. Electrostatic hazards in powder handling and methods for mitigating these risks. Health and safety risks due to exposure to fine powders in various industries. Identification and control of hazards in powder processing industries. Learn safety measures in power handling, particularly in high-risk. (3 marks)**

Module 3

► **Define or explain 3 Understanding power handling. Types of electrical faults and hazards in power. (3 marks)**

► **Define or explain 4 Understanding systems. Electrical shock prevention and safe handling of. (3 marks)**

► **Define or explain 4 Applying electrical equipment. Fire hazards due to electrical systems and fire. (3 marks)**

► **Define or explain 4 Applying safety protocols in power handling. Overview of electrical hazards in industrial settings. Identifying and controlling electrical faults. Fire safety in power handling systems, including prevention of electrical fires. Apply safety standards to prevent electrical accidents in power handling. (3 marks)**

Module 4

► **Define or explain 3 Applying environments, including isolation and grounding methods. Emergency procedures and safety measures in case. (3 marks)**

► **Define or explain 4 Applying of electrical accidents. Electrical protective systems: safety protocols and. (3 marks)**

► **Define or explain 4 Applying preventive measures. Safety audits and ensuring compliance with safety. (3 marks)**

► **Define or explain 3 Understanding regulations in power handling. Electrical safety: Isolation, grounding, and preventive systems. Handling electrical emergencies, including power outages and faults. Safety audits in electrical and power handling operations Text /Reference: T/R Book Title/Author R1 Crowl, D.A., Louvar, J.F., Chemical Process Safety - Fundamentals with Applications, Prentice-Hall, Pearson, 2011. Tate, L.P., Electrical Safety in Process Industries, Wiley, 2012. R2 Warren, T.G., Safety in Process Industries, Elsevier, 2015. R6 Tanner, M., Power Handling Safety and Industrial Regulations, Elsevier, 2014.. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **3 Understanding powder dispersion, and spark generation.. Characteristics of flammable gases, solvent vapor.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **4 Understanding release, and types of discharge. Electrostatic discharge in powder handling.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **3 Understanding power handling. Types of electrical faults and hazards in power.**

Module 4

1-mark definition: State the meaning of **3 Applying environments, including isolation and grounding methods. Emergency**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

procedures and safety measures in case.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
