

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 5463A

5 Credits: 4

Program Elective

Source-grounded

Safety in Construction and Textile

- To understand the safety issues unique to the construction and textile industries.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 5463A is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5463A.pdf from the uploaded official SITTTTR syllabus archive.

Course code and title: preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Fire Technology and Safety
Course code	5463A
Course title	Safety in Construction and Textile
Semester	5 Credits: 4
Course category	Program Elective
Periods per week	4 (L:4 T:0 P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

21 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES**Objectives, outcomes and mapping****Course objectives**

- ● To understand the safety issues unique to the construction and textile industries.
- ● To identify and mitigate ergonomic risks, equipment hazards, and environmental risks within these industries.
- ● To introduce relevant regulations, standards, and legal frameworks for ensuring safety in construction.
- ● To equip students with knowledge about specific safety practices for various construction operations and textile industry hazards.
- ● To understand the roles of stakeholders in promoting safety and preventing accidents in construction and textile industries.

Course outcomes

CO	Official outcome	Study level
CO1	13 Understanding and textile industries. Identify and apply safety measures for various	See official syllabus
CO2	16 Applying construction operations and materials. Analyze hazards in construction sites and textile	See official syllabus
CO3	manufacturing units and suggest control measures. 15 Analyzing Understand relevant Indian standards, legal	See official syllabus
CO4	14 frameworks, and welfare provisions for construction Understanding workers.	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
-----	----------------------------

Row	Extracted official mapping
CO1	CO1 3 2 2
CO2	CO2 3 3 3
CO3	CO3 3 3 2 3
CO4	CO4 3 3 3 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	industries.	6	As specified
Module 2	and materials.	5	As specified
Module 3	and suggest control measures	5	As specified
Module 4	Understand relevant Indian standards, legal frameworks, and welfare	5	As specified

MODULE 1**industries.**

This module is presented from the official syllabus scope for Safety in Construction and Textile. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: industries.
- Official duration: As specified
- Official topic entries captured: 6
- The full source excerpt is preserved below for coverage checking.

▼ 2 Understanding safety issues.

2 Understanding safety issues. is an official topic in Module 1 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding safety issues. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding safety issues. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 2 Understanding safety issues. means in the official course context

Aspect	What to prepare
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-2 Understanding safety issues.

പ്രതിരോധം, പ്രതിരോധം definition/meaning പ്രതിരോധം. പ്രതിരോധം പ്രതിരോധം, steps, application പ്രതിരോധം പ്രതിരോധം പ്രതിരോധം. Technical terms English-ൽ പ്രതിരോധം പ്രതിരോധം.

▼ Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers,

Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers, is an official topic in Module 1 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers, using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, human factors in construction safety management. 2 understanding roles of stakeholders (management, workers, should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers, means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers, definition/meaning. definition/meaning, steps, application. Technical terms English- Malayalam.

▼ 2 Applying government, contractors) in ensuring safety. Framing of contract conditions on safety and

2 Applying government, contractors) in ensuring safety. Framing of contract conditions on safety and is an official topic in Module 1 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Applying government, contractors) in ensuring safety. Framing of contract conditions on safety and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 applying government, contractors) in ensuring safety. framing of contract conditions on safety and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Definition/identity	What 3 Applying Safety in construction of temporary structures, including scaffolding and shoring. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2- 3 Applying Safety in construction of temporary structures, including scaffolding and shoring. definition/meaning . steps, application . Technical terms English- .

▼ **3 Analyzing Safety in specialized construction operations – tunneling, blasting, and confined space work. Construction Phases: Detailed safety measures for foundation work, wall and roof construction, and structural work. Temporary Structures: Safety standards for scaffolds, ladders, and formwork used during construction. Specialized Operations: Risk control strategies for tasks such as tunneling, blasting, and confined space work. Indian Standards and National Building Code: Familiarization with relevant codes and standards for construction safety. Analyze hazards in construction sites and textile manufacturing units**

3 Analyzing Safety in specialized construction operations – tunneling, blasting, and confined space work. Construction Phases: Detailed safety measures for foundation work, wall and roof construction, and structural work. Temporary Structures: Safety standards for scaffolds, ladders, and formwork used during construction. Specialized Operations: Risk control strategies for tasks such as tunneling, blasting, and confined space work. Indian Standards and National Building Code: Familiarization with relevant codes and standards for construction safety. Analyze hazards in construction sites and textile manufacturing units is an official topic in Module 2 of Safety in Construction and Textile. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Analyzing Safety in specialized construction operations – tunneling, blasting, and confined space work. Construction Phases: Detailed

safety measures for foundation work, wall and roof construction, and structural work. Temporary Structures: Safety standards for scaffolds, ladders, and formwork used during construction. Specialized Operations: Risk control strategies for tasks such as tunneling, blasting, and confined space work. Indian Standards and National Building Code: Familiarization with relevant codes and standards for construction safety. Analyze hazards in construction sites and textile manufacturing units using standard technical terminology.

- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 analyzing safety in specialized construction operations – tunneling, blasting, and confined space work. construction phases: detailed safety measures for foundation work, wall and roof construction, and structural work. temporary structures: safety standards for scaffolds, ladders, and formwork used during construction. specialized operations: risk control strategies for tasks such as tunneling, blasting, and confined space work. indian standards and national building code: familiarization with relevant codes and standards for construction safety. analyze hazards in construction sites and textile manufacturing units should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Tomasin, Construction Safety Handbook, Thomas Telford R2 Publishing, London. (1996) R3 The Contract Labour (Regulation and Abolition) Central Rules (1971) Building and Other Construction Workers (Regulation of Employment and R4 Conditions of Service) Act, 1996 and Central Rules Relevant Indian Standard Codes of Practice R5 means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 4-□□ 3 Understanding overview and implementation. Worker Welfare: The minimum facilities required for construction workers, including sanitation, drinking water, and first aid. Legal Framework: An introduction to the Contract Labour (R&A) Act, the BOCW Act, and provisions for worker welfare. Safety Standards: Reviewing the legal safety standards, penalties, and compliance for construction projects. Welfare Regulations: Discussion of health and welfare provisions for workers at construction sites.  , steps, application . Technical terms English-
 .

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

RAPID REFERENCE**Concept and formula bank****Answer structure**

Definition → Principle →
Components/steps →
Application → Conclusion

Use this sequence for descriptive questions when the topic does not require a numerical formula.

Practical record

Aim → Apparatus → Procedure
→ Observation → Result →
Safety

Use this sequence for laboratory, workshop and field activities.

RAPID REVISION**Diagram and source-transcript library****Module 1 source and topic cards**

OFFICIAL SELF-LEARNING**Activities from the syllabus**

Use the extracted official activity wording as the record of required self-learning work.

The official PDF does not expose a separate activities heading in the extracted text; consult the source PDF pages for the exact activity list.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain 2 Understanding safety issues.. (3 marks)**

► **Define or explain Human factors in construction safety management. 2 Understanding Roles of stakeholders (management, workers,. (3 marks)**

► **Define or explain 2 Applying government, contractors) in ensuring safety. Framing of contract conditions on safety and. (3 marks)**

► **Define or explain 2 Understanding safety-related matters. Ergonomic risks in construction - identification. (3 marks)**

Module 2

► **Define or explain 4 Applying foundations, excavation, and piling. Safety during the construction of walls, roofs, and. (3 marks)**

► **Define or explain 3 Applying structural frames.. (3 marks)**

► **Define or explain 3 Applying Safety during the erection of structural steel work and concrete framed structures.. (3 marks)**

► **Define or explain 3 Applying Safety in construction of temporary structures, including scaffolding and shoring.. (3 marks)**

Module 3

- ▶ **Define or explain 3 Applying construction materials. Safety in the use of construction equipment -. (3 marks)**
- ▶ **Define or explain 3 Applying hoists, lifts, and cranes. Hazards in construction sites - electrical, fire,. (3 marks)**
- ▶ **Define or explain 3 Analyzing and chemical hazards. Health hazards at construction sites - physical,. (3 marks)**
- ▶ **Define or explain 3 Analyzing psychological, and biological. Safety in construction vehicle/machinery. (3 marks)**

Module 4

- ▶ **Define or explain 2 Understanding and welfare. Site selection, minimum facilities, and sanitary. (3 marks)**
- ▶ **Define or explain provisions.. (3 marks)**
- ▶ **Define or explain The Contract Labour (R&A) Act and Central Rules 3 Applying - Registration, licensing, welfare. The BOCW Act and welfare provisions -. (3 marks)**
- ▶ **Define or explain 3 Understanding Penalties, wages, and legal protections. Legal frameworks regarding construction safety -. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **2 Understanding safety issues..**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **4 Applying foundations, excavation, and piling. Safety during the construction of walls, roofs, and.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **3 Applying construction materials. Safety in the use of construction equipment -.**

Module 4

1-mark definition: State the meaning of **2 Understanding and welfare. Site selection, minimum facilities, and sanitary.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
