

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 5463B

5 Credits: 4

Program Elective

Source-grounded

Safety in Material Handling

- To understand the concepts, principles, and significance of material handling in

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 5463B is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 5463B.pdf from the uploaded official SITTTTR syllabus archive.

Course code and title: preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Fire Technology and Safety
Course code	5463B
Course title	Safety in Material Handling
Semester	5 Credits: 4
Course category	Program Elective
Periods per week	4 (L:4, T:0, P:0) Periods per semester: 60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

19 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES**Objectives, outcomes and mapping****Course objectives**

- ● To understand the concepts, principles, and significance of material handling in
- ensuring workplace safety.
- ● To explore various types of material handling equipment and their correct usage.
- ● To examine the risks associated with manual material handling (MMH) and mechanical material handling (MMHE).
- ● To learn safety protocols and techniques to mitigate hazards associated with manual
- and mechanical material handling operations.
- ● To incorporate the latest safe methods in material handling operations and understand
- their practical applications.

Course outcomes

CO	Official outcome	Study level
CO1	15 Understanding handling in safety management. Identify and classify various types of material	See official syllabus
CO2	14 Applying handling equipment and their uses. Analyze the risks associated with manual handling	See official syllabus
CO3	and suggest safety measures. 14 Analyzing Understand safety considerations and control	See official syllabus
CO4	15 Applying measures for mechanical material handling.	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
-----	----------------------------

Row	Extracted official mapping
CO1	CO1 3 2 2
CO2	CO2 3 3 3
CO3	CO3 3 3 2 3
CO4	CO4 3 3 3 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Understand the principles and significance of material handling in safety	5	As specified
Module 2	their uses.	5	As specified
Module 3	Analyze the risks associated with manual handling and suggest safety	4	As specified
Module 4	material handling.	5	As specified

MODULE 1

Understand the principles and significance of material handling in safety

This module is presented from the official syllabus scope for Safety in Material Handling. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Understand the principles and significance of material handling in safety
- Official duration: As specified
- Official topic entries captured: 5
- The full source excerpt is preserved below for coverage checking.

▼ 3 Understanding Principles of Material Handling: Objectives and

3 Understanding Principles of Material Handling: Objectives and is an official topic in Module 1 of Safety in Material Handling. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding Principles of Material Handling: Objectives and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding principles of material handling: objectives and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 3 Understanding Principles of Material Handling: Objectives and means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-3 Understanding Principles of Material Handling: Objectives and definition/meaning. steps, application. Technical terms English-.

▼ 3 Understanding efficiency. Material Handling Equipments: Types and

3 Understanding efficiency. Material Handling Equipments: Types and is an official topic in Module 1 of Safety in Material Handling. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding efficiency. Material Handling Equipments: Types and using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding efficiency. material handling equipments: types and should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Definition/identity	What 4 Applying slips, falls, and strains during manual handling. Ergonomics in Manual Material Handling: means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3-4 Applying slips, falls, and strains during manual handling. Ergonomics in Manual Material Handling: ഏകദേശം definition/meaning എന്തെങ്കിലും. ഏകദേശം ഏകദേശം ഏകദേശം, steps, application എന്തെങ്കിലും ഏകദേശം ഏകദേശം. Technical terms English-എന്തെങ്കിലും ഏകദേശം.

▼ 4 Analyzing Designing workstations to reduce strain. Latest Trends in Safety in MMH: Wearable

4 Analyzing Designing workstations to reduce strain. Latest Trends in Safety in MMH: Wearable is an official topic in Module 3 of Safety in Material Handling. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Analyzing Designing workstations to reduce strain. Latest Trends in Safety in MMH: Wearable using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 analyzing designing workstations to reduce strain. latest trends in safety in mmh: wearable should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

MODULE 4**material handling.**

This module is presented from the official syllabus scope for Safety in Material Handling. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 4 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: material handling.
- Official duration: As specified
- Official topic entries captured: 5
- The full source excerpt is preserved below for coverage checking.

▼ 3 Applying (MMHE): Types, uses, and classification. Safety Risks in Mechanical Material Handling:

3 Applying (MMHE): Types, uses, and classification. Safety Risks in Mechanical Material Handling: is an official topic in Module 4 of Safety in Material Handling. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Applying (MMHE): Types, uses, and classification. Safety Risks in Mechanical Material Handling: using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 applying (mmhe): types, uses, and classification. safety risks in mechanical material handling: should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

▼ Identifying hazards and risks.

Identifying hazards and risks. is an official topic in Module 4 of Safety in Material Handling. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Identifying hazards and risks. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, identifying hazards and risks. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain 3 Understanding Principles of Material Handling: Objectives and. (3 marks)**

► **Define or explain 3 Understanding efficiency. Material Handling Equipments: Types and. (3 marks)**

► **Define or explain 4 Applying selection criteria.. Systems Concept of Material Handling: Elements. (3 marks)**

► **Define or explain 2 Understanding and advantages of correct handling. Limitations and drawbacks in material handling. (3 marks)**

Module 2

► **Define or explain 2 Understanding semi-automatic, and automatic systems. Risk Factors Associated with Manual Handling:.. (3 marks)**

► **Define or explain 3 Analyzing Causes and prevention strategies.. (3 marks)**

► **Define or explain 3 Applying Methods to prevent back injury in manual material handling (MMH).. (3 marks)**

- **Define or explain 3 Applying Ways to reduce the risk associated with manual material handling.. (3 marks)**

Module 3

- **Define or explain 3 Applying Proper lifting techniques, posture. Common Safety Considerations: Preventing. (3 marks)**

- **Define or explain 4 Applying slips, falls, and strains during manual handling. Ergonomics in Manual Material Handling:. (3 marks)**

- **Define or explain 4 Analyzing Designing workstations to reduce strain. Latest Trends in Safety in MMH: Wearable. (3 marks)**

- **Define or explain 3 Applying technology and IoT-enabled monitoring systems for risk mitigation. Safety Techniques: Proper lifting, carrying, and positioning methods to reduce the risk of injury. Ergonomics: How to design and modify workstations for better safety and comfort in manual handling. Preventive Practices: Tips for preventing common injuries, such as strains and back injuries. IoT-enabled Monitoring Systems: The use of smart sensors, wearables, and tracking devices to monitor workers' movements and prevent overexertion. Understand safety considerations and control measures for mechanical. (3 marks)**

Module 4

- **Define or explain 3 Applying (MMHE): Types, uses, and classification. Safety Risks in Mechanical Material Handling:. (3 marks)**

- **Define or explain Identifying hazards and risks.. (3 marks)**

- **Define or explain Control Measures for MMHE Hazards: Risk 3 Applying assessment, safety standards. Safety Features in MMHE:**

Emergency stop. (3 marks)

- ▶ **Define or explain 3 Understanding systems, overload protection.**
- Latest Trends in MMHE Safety: Automation,. (3 marks)**

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **3 Understanding Principles of Material Handling: Objectives and.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **2 Understanding semi-automatic, and automatic systems. Risk Factors Associated with Manual Handling:.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **3 Applying Proper lifting techniques, posture. Common Safety Considerations: Preventing.**

Module 4

1-mark definition: State the meaning of **3 Applying (MMHE): Types, uses, and classification. Safety Risks in Mechanical Material Handling:.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
