

KERALA DIPLOMA CURRICULUM REVISION 2026

Course 6361A

6 Credits: 4

Program Core

Source-grounded

Water supply and Sanitation

□ To impart knowledge to the students about the estimation of water demands

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 6361A is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 6361A.pdf from the uploaded official SITTTTR syllabus archive.

Course code and title: preserved from the source.

COURSE DASHBOARD

Official course information

Course information

Item	Official information
Programme	Diploma in Civil and Rural Engineering
Course code	6361A
Course title	Water supply and Sanitation
Semester	6 Credits: 4
Course category	Program Core
Periods per week	4 (L:4, T:0, P:0) Periods per semester:60
Periods per semester	60
Credits	4
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

17 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD**How to use this lesson****First pass**

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES**Objectives, outcomes and mapping****Course objectives**

- To impart knowledge to the students about the estimation of water demands for proper design of water supply works.
- To make the students aware about the different water conveyance and distribution systems.
- To Familiarize the students with different stages of water treatment, different methods of sewage treatment and disposal and operations involved.

Course outcomes

CO	Official outcome	Study level
CO1	determine water demands from available data for 14 Applying designing water supply systems.	See official syllabus
CO2	Suggest appropriate water treatment methods 15 Understanding Identify the components required for Building	See official syllabus
CO3	14 Understanding sanitation and Sewerage systems Suggest appropriate sewage treatment and disposal	See official syllabus
CO4	15 Understanding methods	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3 3 3
CO2	CO2 3 3 3
CO3	CO3 3 3

Row	Extracted official mapping
CO4	CO4 3 3 3

COVERAGE AUDIT

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	demands from available data for designing water supply systems.	4	As specified
Module 2	Suggest appropriate water treatment methods	5	As specified
Module 3	Identify the components required for Building sanitation and Sewerage	4	As specified
Module 4	Suggest appropriate sewage treatment and disposal methods	4	As specified

MODULE 1

demands from available data for designing water supply systems.

This module is presented from the official syllabus scope for Water supply and Sanitation. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: demands from available data for designing water supply systems.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 3 Understanding sources of water. Determine water demands for a water supply

3 Understanding sources of water. Determine water demands for a water supply is an official topic in Module 1 of Water supply and Sanitation. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Understanding sources of water. Determine water demands for a water supply using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 understanding sources of water. determine water demands for a water supply should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
--------	-----------------

Aspect	What to prepare
Definition/identity	What 3 Understanding sources of water. Determine water demands for a water supply means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- 3 Understanding sources of water. Determine water demands for a water supply definition/meaning. steps, application. Technical terms English- .

▼ 4 Applying scheme Outline standard tests for analyzing water for

4 Applying scheme Outline standard tests for analyzing water for is an official topic in Module 1 of Water supply and Sanitation. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Applying scheme Outline standard tests for analyzing water for using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 applying scheme outline standard tests for analyzing water for should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-4 Applying scheme Outline standard tests for analyzing water for definition/meaning. steps, application. Technical terms English-

▼ 4 Understanding drinking purposes Explain the different rural water

4 Understanding drinking purposes Explain the different rural water is an official topic in Module 1 of Water supply and Sanitation. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 Understanding drinking purposes Explain the different rural water using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 understanding drinking purposes explain the different rural water should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 2

Suggest appropriate water treatment methods

This module is presented from the official syllabus scope for Water supply and Sanitation. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Suggest appropriate water treatment methods
- Official duration: As specified
- Official topic entries captured: 5
- The full source excerpt is preserved below for coverage checking.

▼ sedimentation, and sedimentation with 3 Understanding coagulation. Outline the construction and operation of slow

sedimentation, and sedimentation with 3 Understanding coagulation.

Outline the construction and operation of slow is an official topic in Module 2 of Water supply and Sanitation. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify sedimentation, and sedimentation with 3 Understanding coagulation. Outline the construction and operation of slow using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, sedimentation, and sedimentation with 3 understanding coagulation. outline the construction and operation of slow should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare

Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic

with a related but different term.

Malayalam support: Module 2-3 distribution of water in a given situation Purification of water: Objectives of water treatment, Aeration – objects and methods of aeration- Plain sedimentation, Sedimentation with coagulation, principles of coagulation, types of coagulants, Jar Test, process of coagulation, types of sedimentation tanks, Clariflocculator - Filtration - Mechanism of filtration- classification of filters: slow sand filter, rapid sand filter, pressure filter. Construction and working of slow sand and rapid sand filter, operational problems in filtration – Disinfection: Objects, methods of disinfection, Chlorination- Application of chlorine, forms of chlorination, types of chlorination practices, residual chlorine and its importance – Flow diagram of water treatment plants. (No design for treatment units). Introduction to water softening, iron removal and Deflouridation techniques- Nalgonda method. Advanced Water treatments-Electrolysis, Reverse Osmosis. Conveyance: Types of Pipes used for conveyance of water, choice of pipe material, Types of joints and valves - location and function on a pipe line. Conservation of water- Rainwater Harvesting. Distribution of water: Methods of distribution of water- Gravity, pumping, and combined system, Service reservoirs - functions and types, Layouts of distribution of Water- Dead end system, grid iron system, circular system, radial system; their suitability, advantages and disadvantages. Hand pumps-types, installation, operation, and maintenance of hand pumps. പമ്പിംഗ് സിസ്റ്റത്തിന്റെ definition/meaning പമ്പിംഗ് സിസ്റ്റത്തിന്റെ പമ്പിംഗ്, steps, application പമ്പിംഗ് സിസ്റ്റത്തിന്റെ പമ്പിംഗ്. Technical terms English- പമ്പിംഗ് പമ്പിംഗ്.

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 3

Identify the components required for Building sanitation and Sewerage

This module is presented from the official syllabus scope for Water supply and Sanitation. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 3 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Identify the components required for Building sanitation and Sewerage
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

▼ 3 Remembering sullage, and garbage

3 Remembering sullage, and garbage is an official topic in Module 3 of Water supply and Sanitation. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 3 Remembering sullage, and garbage using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 3 remembering sullage, and garbage should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 3 Remembering sullage, and garbage means in the official course context

Aspect	What to prepare
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3- 3 Remembering sullage, and garbage definition/meaning. , steps, application . Technical terms English- .

▼ Identify the different building sanitary fittings 4 Understanding and systems of plumbing Explain different sewerage

Identify the different building sanitary fittings 4 Understanding and systems of plumbing Explain different sewerage is an official topic in Module 3 of Water supply and Sanitation. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Identify the different building sanitary fittings 4 Understanding and systems of plumbing Explain different sewerage using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, identify the different building sanitary fittings 4 understanding and systems of plumbing explain different sewerage should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Online Resources: Sl.No Website Link 1 <http://nptel.ac.in/courses> 2 <http://www.vlab.co.in/ba-nptel-labs-civil-engineering> 3 Document Published by Ministry of Rural development, Govt. of India, Ministry of Rural development. **പ്രവൃത്തി** definition/meaning **പ്രവൃത്തി**. **പ്രവൃത്തി** **പ്രവൃത്തി** **പ്രവൃത്തി**, steps, application **പ്രവൃത്തി** **പ്രവൃത്തി** **പ്രവൃത്തി**. Technical terms English- **പ്രവൃത്തി** **പ്രവൃത്തി**.

► **Official syllabus detail and terminology (expand in digital version)**

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

RAPID REFERENCE

Concept and formula bank

Answer structure

Definition → Principle →
Components/steps →
Application → Conclusion

Use this sequence for descriptive questions when the topic does not require a numerical formula.

Practical record

Aim → Apparatus → Procedure
→ Observation → Result →
Safety

Use this sequence for laboratory, workshop and field activities.

OFFICIAL SELF-LEARNING**Activities from the syllabus**

Use the extracted official activity wording as the record of required self-learning work.

The official PDF does not expose a separate activities heading in the extracted text; consult the source PDF pages for the exact activity list.

EXAMINATION PREPARATION

Assessment methodology

The following source extract preserves the assessment information detected in the official PDF. Verify mark conversions and institutional updates against the current source before an examination.

The official assessment structure is reproduced from the supplied PDF.

Practice-paper notice: The model paper below is generated for revision and is not an official examination paper.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

► **Define or explain 3 Understanding sources of water. Determine water demands for a water supply. (3 marks)**

► **Define or explain 4 Applying scheme Outline standard tests for analyzing water for. (3 marks)**

► **Define or explain 4 Understanding drinking purposes Explain the different rural water. (3 marks)**

► **Define or explain 3 Understanding supply schemes by the Government**
Sources of Water: Surface source - lakes, streams, rivers and
impounded reservoirs, Yield from surface source - Underground sources
- springs, wells, infiltration wells and galleries - Yield from wells - test
for yield. Intake Structures, Definition and types, Factors governing the
location of an intake structure, Types of intakes. Demand of water:
Factors affecting rate of demand, Variations of water demands,
Forecasting of population, Methods of forecasting of population,
(Simple problems on forecasting of population), Design period,
Estimating of quantity of water supply required for city or town. Quality
of water: Need for analysis of water, Characteristics of water - Physical,
Chemical and Biological, Testing of water for Total solids, hardness,
chlorides, dissolved Oxygen, pH, Fluoride, Nitrogen and its compounds,
Bacteriological tests, E coli, B coli index, MPN, Sampling of water, Water
quality standards as per IS 10500. Water supply schemes - Objectives,
components, Rural water supply schemes by Government-NRDWP-Jal

Jeevan Mission, Atal Bhujal Yojana, Jal Sakthi Abhiyan KRWSA-Jalanidhi, Jala Subhiksha.. (3 marks)

Module 2

► **Define or explain sedimentation, and sedimentation with 3 Understanding coagulation. Outline the construction and operation of slow. (3 marks)**

► **Define or explain 3 Understanding sand, rapid sand and pressure filters. Explain methods of disinfection and. (3 marks)**

► **Define or explain advanced treatment methods for the water 3 Understanding in a given situation Identify the different components of a. (3 marks)**

► **Define or explain 3 Understanding conveyance system Explain with sketches the methods of Applying. (3 marks)**

Module 3

► **Define or explain 3 Remembering sullage, and garbage. (3 marks)**

► **Define or explain Identify the different building sanitary fittings 4 Understanding and systems of plumbing Explain different sewerage. (3 marks)**

► **Define or explain systems. (3 marks)**

► **Define or explain Describe the various types of sewer 3 Understanding appurtenances Building Sanitation: Necessity of sanitation, Necessity to treat domestic sewage, Definitions - Sewage, sullage, types of sewage. Definition of the terms related to Building Sanitation- Water pipe, Rain**

water pipe, Soil pipe, Sullage pipe, Vent pipe. Building Sanitary fittings- Water closet - Indian and European type, flushing cistern, wash basin, sinks, Urinals. Traps-types, qualities of good trap. Systems of plumbing - one pipe, two pipe, single stack, choice of system. Principles regarding design of building drainage, inspection and junction chambers, their necessity, location, size and shape. Systems of Sewerage and Sewer Appurtenances: Types of Sewers, Systems of sewerage, self-cleansing velocity and non-scouring velocity, Laying, Testing and maintenance of sewers, Manholes and Drop Manhole-component parts, location, spacing, construction details, Sewer Inlets, Street Inlets.. (3 marks)

Module 4

► Define or explain 3 Understanding Outline the functions and working of screens,. (3 marks)

► Define or explain 3 Understanding skimming tanks, and grit chambers. Describe various sewage treatment and disposal. (3 marks)

► Define or explain 4 Understanding methods Explain various low cost rural sanitation. (3 marks)

► Define or explain 5 Understanding systems Analysis of sewage: Characteristics of sewage, B.O.D., C.O.D. and its significance, Central Pollution Control Board Norms for discharge of treated sewage, Objects of sewage treatment and flow diagram of conventional sewage treatment plant. Treatment of Sewage: Screening, Types of screens, Grit removal, Skimming, Sedimentation of sewage, Aerobic and anaerobic process, Sludge digestion, trickling filters, Activated sludge process, Disposal of sewage, Oxidation Pond, Oxidation ditch, aerated lagoons, anaerobic lagoon. Rural sanitation: Low cost rural sanitation systems- Privies of a conservancy system of sanitation- Bore hole privy, Aqua privy, Sulabh Shauchalya, Two pit pour flush water seal, Septic tank and soak pit, Recycling and Reuse of domestic waste. Composting (Nadep or Vermiculture), Biogas plants. Low cost community and individual

Garbage disposal systems, Ferro-cement storage tanks. Rural sanitation programmes by Government of India, Swachh Bharat Mission-Objectives and strategies. Suchitwa mission. Text / Reference: T/R Book

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **3 Understanding sources of water. Determine water demands for a water supply.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **sedimentation, and sedimentation with 3 Understanding coagulation. Outline the construction and operation of slow.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **3 Remembering sullage, and garbage.**

Module 4

1-mark definition: State the meaning of **3 Understanding Outline the functions and working of screens,.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.
- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
