Revision 2021 • Semester 1 & 2

Engineering Workshop Practice

Course Code: 2009

Credits: 1.5

Category: Engineering Science

Total Hours: 90

Course Overview

Engineering Workshop Practice is a foundational course designed to provide hands-on experience in various engineering trades. The course bridges the gap between theoretical concepts and practical fabrication.

Teaching & Assessment Scheme

Component	Details
Periods per week	3 Practical (P)
Total Periods	45 (Sem 1) + 45 (Sem 2) = 90 Hours
Assessment	Continuous Internal Assessment (CIA) & End Semester Exam (ESE)

Course Objectives:

- Familiarize safety precautions in the workplace.
- Prepare drawings and models for fabrication.
- Identify measuring, marking, holding, striking, and cutting tools.
- Practice electrical wiring, soldering, and motor connections.
- Operate machines and power tools safely.

Course Outcomes (CO)

CO No.	Description	Cognitive Level
CO1	Identify safety precautions, tools and devices required to make carpentry joints.	Applying
CO2	Make use of various tools, machines, instruments and power tools used in the Fitting shop to make fitting joints.	Applying
CO3	Make use of various tools, machines, instruments and power tools used in the Welding shop to make welding joint.	Applying
CO4	Utilize different sheet metal tools and measuring instruments to make sheet metal joints.	Applying
CO5	Make use of various tools and accessories to practice electrical wiring, motor connection and soldering.	Applying

Module 1: Carpentry Shop

18 Hours

Carpentry involves the process of cutting, shaping, and installing building materials during the construction of buildings, ships, timber bridges, etc.

Malayalam support:

കാർപ്പന്ററി എന്നത് കെട്ടിട നിർമ്മാണത്തിൽ വ്യക്തിഗതമായി ഉപയോഗിക്കുന്ന കെട്ടിട നിർമ്മാണ സാമഗ്രികളെക്കുറിച്ചുള്ള അറിവാണ്. കാർപ്പന്ററി നിർമ്മാണത്തിൽ, കാർപ്പന്ററികൾ ഉപയോഗിക്കുന്നു, കാർപ്പന്ററികൾ ഉപയോഗിക്കുന്നു. കാർപ്പന്ററികൾ ഉപയോഗിക്കുന്നു. കാർപ്പന്ററികൾ ഉപയോഗിക്കുന്നു.

1.1 Safety Precautions

- **Personal Safety:** Wear tight-fitting clothes, use safety shoes, and avoid loose hair or jewelry.
- **Machine Safety:** Do not operate power tools without permission. Ensure guards are in place.
- **Job Safety:** Keep the workbench clean. Use sharp tools only.

1.2 Carpentry Tools

Category	Tools
Marking & Measuring	Steel rule, Try square, Bevel square, Marking gauge, Mortise gauge, Wing compass.
Cutting Tools	Hand saw, Tenon saw, Firmer chisel, Mortise chisel, Jack plane (Wooden/Metal).
Striking Tools	Mallet, Claw hammer.
Holding Devices	Carpenters Bench vice, G-clamp, Sash clamp.

1.3 Practice Exercise: Open Halved Joint

The halved joint is a woodworking joint in which the two members are joined by removing half the thickness of each at the point of intersection.

Basic representation of a Halved Joint preparation.

Module 2: Fitting Shop

18 Hours

Fitting is the process of assembling various parts manufactured in a machine shop to form a final machine or mechanism.

Malayalam support:

ഫിറ്റിംഗ് ഒരു യന്ത്രശാലയിൽ നിർമ്മിച്ച വ്യത്യസ്ത ഭാഗങ്ങൾ ഒരു യന്ത്രം അല്ലെങ്കിൽ മെക്കാനിസം ആക്കി ചേർക്കുന്ന പ്രക്രിയയാണ്. സെറിയർ, സെന്റർ പന്യ, പ്രിക്ക് പന്യ, സർഫേസ് പ്ലേറ്റ്, V-ബ്ലോക്ക്, ഓൾഗ്ലേറ്റ്.

2.1 Fitting Tools

- **Marking:** Scriber, Centre punch, Prick punch, Surface plate, V-block, Angle plate.

- **Cutting:** Hack saw (Solid/Adjustable), Chisels (Flat, Cross-cut).
- **Filing:** Single cut and Double cut files. Types: Flat, Square, Round, Half-round, Triangular.
- **Measuring:** Vernier height gauge, Outside/Inside calipers, Jenny caliper.

2.2 Practice Exercise: V-Joint / L-Joint

Students practice filing two metal pieces to achieve a perfect fit in 'V' or 'L' shapes. Precision is checked using a Try Square.

Safety Note: Never use a file without a handle. Do not blow metal chips with your mouth; use a brush.

Module 3: Welding Shop

18 Hours

Welding is a fabrication process that joins materials, usually metals, by using high heat to melt the parts together and allowing them to cool, causing fusion.

3.1 Arc Welding Equipment

- **Welding Machine:** AC Transformer or DC Rectifier.
- **Electrode Holder:** To hold the welding rod.
- **Earth Clamp:** To complete the electrical circuit.
- **Protective Gear:** Face shield/Helmet (with dark glass), Leather Apron, Gloves.

Malayalam support:

വെൽഡിംഗ് ഒരു ഫാബ്രിക്കേഷൻ പ്രക്രിയയാണ്, അത് പൊതുവെ ലോഹങ്ങൾ ഉപയോഗിച്ച് ഉയർന്ന താപനില ഉപയോഗിച്ച് പാർശ്വഭാഗങ്ങൾ ഉണർത്തുകയും അവയെ തണുപ്പിക്കുകയും ചെയ്ത് ഫ്യൂഷൻ സൃഷ്ടിക്കുന്നു. വെൽഡിംഗ് പ്രക്രിയയ്ക്ക് വെൽഡിംഗ് മെഷീൻ, ഇലക്ട്രോഡ് ഹോൾഡർ, ഔദ്യോഗിക ക്ലാമ്പ്, ഫേസ് ഷീൽഡ്/ഹെൽമറ്റ് (തём കണ്ണി), ലീത്ത് അപ്പ്രൺ, ഗ്ലോവ്സ് തുടങ്ങിയവ ഉപയോഗിക്കുന്നു.

3.2 Welding Practice

Butt Joint: The two workpieces are placed in the same plane and joined at their edges.

Weld Bead

Square Butt Joint configuration.

Module 4: Sheet Metal Shop

18 Hours

Sheet metal work involves working with thin metal sheets (usually less than 6mm) to create objects like trays, funnels, and ducts.

4.1 Tools & Operations

- **Snips:** Straight snips and Bent snips for cutting.
- **Stakes:** Metal anvils used for bending and forming (e.g., Hatchet stake, Blow-horn stake).
- **Measuring:** Standard Wire Gauge (SWG) to measure sheet thickness.

Malayalam support:

Standard Wire Gauge (SWG) is a standard used to specify the thickness of wire. The gauge number indicates the thickness of the wire, with lower numbers representing thicker wire. For example, 18 SWG is thicker than 24 SWG.

Standard Wire Gauge (SWG): Note that as the Gauge Number increases, the actual thickness of the sheet decreases. Example: 18 SWG is thicker than 24 SWG.

Module 5: Electrical & Soldering

18 Hours

This module covers basic domestic wiring and industrial motor connections.

5.1 Wiring Circuits

- **One Lamp controlled by One Switch:** Basic series connection of a switch and a bulb.
- **Staircase Wiring:** One lamp controlled by two 2-way switches from different locations.
- **DOL Starter:** Direct-On-Line starter for starting induction motors safely.

5.2 Soldering

Joining electronic components using a filler metal (solder) and a heat source (soldering iron).

Formula Bank

Concept	Formula	Units
Ohm's Law	$V = I \times R$	V (Volts), I (Amps), R (Ohms)
Electrical Power	$P = V \times I$	P (Watts)
Energy Consumption	$E = P \times t$	E (kWh)

Visual Library

Try Square (90°)

Try Square for checking perpendicularity.

Handle

Standard Flat File.

Module-wise Practice Questions

► **Q1: What is the use of a Marking Gauge in Carpentry? (3 Marks)**

► **Q2: Differentiate between Prick Punch and Centre Punch. (3 Marks)**

► **Q3: List the safety equipment used in Welding. (5 Marks)**

Practice Model Paper

Practice Model Paper — Not an Official Examination Paper

Course: Engineering Workshop Practice (2009)

Time: 3 Hours | **Max Marks:** 75 (Internal/External split varies)

Part A: Short Answer Questions (Answer all)

1. Define "Halving" in carpentry.
2. What is the purpose of a V-block in fitting?
3. Name two types of welding joints.
4. What is the function of a Snip in sheet metal work?
5. Expand DOL in motor starters.

Part B: Practical Tasks

1. Prepare an Open Halved Joint from the given wooden piece of size 150x50x25mm.
2. Fabricate a V-joint in the given MS flat piece to the specified dimensions.
3. Perform a straight line bead welding on the given MS plate.

Quick Revision

- **Carpentry:** Focus on grain direction and sharp chisels.
- **Fitting:** Precision is key; use the Try Square frequently.
- **Welding:** Maintain a constant arc length (approx. 3mm).
- **Sheet Metal:** Use a mallet for bending to avoid surface damage.
- **Electrical:** Always check for continuity before powering up.

Glossary

A rough edge or ridge left on metal after cutting or drilling.

A chemical cleaning agent used in soldering and welding to prevent oxidation.

The width of the cut made by a saw blade.

A small anvil used in sheet metal forming.

Official Source Declaration

This lesson content is architected based on the **Revision 2021 Syllabus** for Course Code **2009 (Engineering Workshop Practice)** issued by the State Institute of Technical Teachers' Training & Research (SITTTR), Kerala.

മലയാളം പഠനസഹായം / Malayalam learning support

① 環境問題の重要性を認識し、環境保護の意識を高める。環境問題は地球全体の持続可能性に関与するため、個人レベルでの取り組みが重要である。

② 環境保護のための具体的な行動を講ずる。例えば、リサイクル、省エネ、持続可能な消費などを行う。

③ 環境保護に関する情報を収集し、最新の動向を把握する。環境問題は急速に変化するため、最新の情報を得ることが重要である。

④ 環境保護に関する政策や規制を理解し、それに基づいて行動する。政府や国際機関の取り組みを参考に、個人レベルでの行動を調整する。

⑤ 環境保護に関する知識を他の人に伝える。環境問題は社会全体の問題であるため、一人ひとりの意識の向上が不可欠である。

⑥ 環境保護に関する技術を学ぶ。環境問題は科学的な知識や技術に基づいて解決されるため、最新の技術や知識を学ぶことが重要である。

⑦ 環境保護に関する活動を支援する。環境保護のための活動やプロジェクトに参加し、社会貢献を行う。

⑧ 環境保護に関する意識を高めるためのキャンペーンやイベントに参加する。環境保護の重要性を広く知らせ、社会全体の意識を高める。

⑨ 環境保護に関する知識を日常生活に活かす。例えば、買い物や移動手段の選択など、日常生活のあらゆる場面で環境保護の意識を高める。

⑩ 環境保護に関する知識を他の人に伝える。環境問題は社会全体の問題であるため、一人ひとりの意識の向上が不可欠である。
