

Course 3071

3 Credits: 3

Program Core

Source-grounded

Chemical Engineering

□ To develop an understanding of thermodynamic systems.

OFFICIAL SOURCE DECLARATION

How this lesson was prepared

The supplied official SITTTTR syllabus PDF for Course 3071 is the authoritative source for course information, objectives, course outcomes, CO-PO mapping, modules, topics, activities, assessment structure and references. Explanations, study prompts and Malayalam support are educational elaboration and are not presented as additional official syllabus text.

Source file: 3071.pdf from the uploaded official SITTTTR syllabus archive. **Course code and title:** preserved from the source.

Programme	Diploma in Chemical Engineering
Course code	3071
Course title	Chemical Engineering
Semester	3 Credits: 3
Course category	Program Core
Periods per week	3 (L: 2 T: 1 P: 0) Periods per semester: 45
Periods per semester	45

Item	Official information
Credits	3
Prerequisite	See the official syllabus PDF
Assessment	Use the official assessment section reproduced below

Modules

4 official module sections detected.

Topic entries

20 source-aligned topic entries retained.

Study mode

Theory and application emphasis.

STUDY METHOD

How to use this lesson

First pass

Read the official source declaration, dashboard and module transcript. Mark unfamiliar terms without changing the official terminology.

Second pass

Use each topic card to build a definition, principle, steps or components, application and exam answer. Attempt the Q&A before opening the answers.

Practical evidence

Where the course is laboratory or workshop based, maintain an observation notebook with procedure, instruments, readings, safety points and conclusion.

Revision pass

Return to the source excerpt, coverage table, activities and model paper. The generated paper is practice material, not an official examination paper.

LEARNING OUTCOMES

Objectives, outcomes and mapping

Course objectives

- To develop an understanding of thermodynamic systems.
- To enable the students to use thermodynamics concepts in chemical engineering applications.
- To provide an overview of chemical reaction engineering.

Course outcomes

CO	Official outcome	Study level
CO1	9 Applying thermodynamics. Interpret the fundamental principles of energy	See official syllabus
CO2	16 Applying balance and laws of thermodynamics. Summarize the applications of thermodynamics	See official syllabus
CO3	in real world systems and thermodynamic 12 Understanding properties of fluids Outline the fundamental concepts of reaction	See official syllabus
CO4	8 Understanding engineering.	See official syllabus

CO-PO mapping evidence

Row	Extracted official mapping
CO1	CO1 3
CO2	CO2 3
CO3	CO3 2
CO4	CO4 2

Complete syllabus coverage

Every detected official module is represented below. Each module contains topic cards and an expandable official syllabus transcript to preserve source terminology.

Module coverage

Module	Official heading	Topic entries	Hours
Module 1	Interpret the fundamental concepts of thermodynamics.	5	As specified
Module 2	thermodynamics.	7	As specified
Module 3	thermodynamic properties of fluids.	4	As specified
Module 4	Outline the fundamental concepts of reaction engineering.	4	As specified

MODULE 1

Interpret the fundamental concepts of thermodynamics.

This module is presented from the official syllabus scope for Chemical Engineering. Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 1 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: Interpret the fundamental concepts of thermodynamics.

- Official duration: As specified
- Official topic entries captured: 5
- The full source excerpt is preserved below for coverage checking.

Summarize the scope of thermodynamics. 2 Understanding Summarize the properties of a thermodynamic

Summarize the scope of thermodynamics. 2 Understanding Summarize the properties of a thermodynamic is an official topic in Module 1 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Summarize the scope of thermodynamics. 2 Understanding Summarize the properties of a thermodynamic using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, summarize the scope of thermodynamics. 2 understanding summarize the properties of a thermodynamic should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Summarize the scope of thermodynamics. 2 Understanding Summarize the properties of a thermodynamic means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-താപഗതികശാസ്ത്രത്തിന്റെ പരിധി. 2 Understanding Summarize the properties of a thermodynamic system താപഗതികശാസ്ത്രത്തിന്റെ പരിധി definition/meaning താപഗതികശാസ്ത്രത്തിന്റെ പരിധി. താപഗതികശാസ്ത്രത്തിന്റെ പരിധി, steps, application താപഗതികശാസ്ത്രത്തിന്റെ പരിധി. Technical terms English-താപഗതികശാസ്ത്രത്തിന്റെ പരിധി.

1 Understanding system.

1 Understanding system. is an official topic in Module 1 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 1 Understanding system. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 1 understanding system. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 1 Understanding system. means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- 1 Understanding system. definition/meaning . steps, application . Technical terms English- .

Analyse state of a system and phase rule

Analyse state of a system and phase rule is an official topic in Module 1 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Analyse state of a system and phase rule using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, analyse state of a system and phase rule should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Analyse state of a system and phase rule means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1-ഘട്ടം Analyze state of a system and phase rule
ഘട്ടം definition/meaning ഘട്ടം. ഘട്ടം ഘട്ടം ഘട്ടം,
steps, application ഘട്ടം ഘട്ടം. Technical terms English-ഘട്ടം
ഘട്ടം.

Interpret Zeroth law of thermodynamics

Interpret Zeroth law of thermodynamics is an official topic in Module 1 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Interpret Zeroth law of thermodynamics using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, interpret zeroth law of thermodynamics should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Interpret Zeroth law of thermodynamics means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 1- Interpret Zeroth law of thermodynamics

definition/meaning . steps, application . Technical terms English- .

Interpret first law of thermodynamics. 4 Applying Scope of thermodynamics - Definitions and fundamental concepts in thermodynamics - System - Process - Surroundings - Homogeneous and Heterogeneous systems - Closed, Open, Isolated and Adiabatic systems. Thermodynamic state and properties - Intensive and Extensive properties-State and Path functions - Heat and work. Steady state - Equilibrium state - Phase rule Temperature and Zeroth law of thermodynamics - Heat reservoir - Heat engine - Heat pump - Reversible and irreversible processes. Statements of first law of thermodynamics - Kinetic energy - Potential energy - Internal energy - Cyclic process- Non flow process - Enthalpy - Simple numerical - Flow process - Heat capacity . Interpret the fundamental principles of energy balance and laws of

Interpret first law of thermodynamics. 4 Applying Scope of thermodynamics - Definitions and fundamental concepts in thermodynamics - System - Process - Surroundings - Homogeneous and Heterogeneous systems - Closed, Open, Isolated and Adiabatic systems. Official syllabus detail and terminology

The following excerpt preserves official syllabus terminology for this module.
Educational explanations below are separate elaboration.

Interpret the fundamental concepts of thermodynamics.

M1.01	Summarize the scope of thermodynamics.	2
Understanding	Summarize the properties of a thermodynamic	
M1.02	system.	1
Understanding	M1.03 Analyse state of a system and phase rule	1
Understanding	M1.04 Interpret Zeroth law of thermodynamics	1
Understanding	M1.05 Interpret first law of thermodynamics.	4
Applying		

Contents:

Scope of thermodynamics - Definitions and fundamental concepts in thermodynamics
-
System – Process - Surroundings - Homogeneous and Heterogeneous systems – Closed, Open, Isolated and Adiabatic systems.
Thermodynamic state and properties - Intensive and Extensive properties-State and Path
functions - Heat and work.
Steady state – Equilibrium state - Phase rule
Temperature and Zeroth law of thermodynamics – Heat reservoir – Heat engine –

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 2

thermodynamics.

This module is presented from the official syllabus scope for Chemical Engineering.
Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 2 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: thermodynamics.
- Official duration: As specified
- Official topic entries captured: 7
- The full source excerpt is preserved below for coverage checking.

Outline P-V-T behavior of pure fluids

Outline P-V-T behavior of pure fluids is an official topic in Module 2 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Outline P-V-T behavior of pure fluids using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, outline p-v-t behavior of pure fluids should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Outline P-V-T behavior of pure fluids means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2-ഓൗട്ലൈൻ P-V-T behavior of pure fluids

ഓൗട്ലൈൻ ഓൗട്ലൈൻ definition/meaning ഓൗട്ലൈൻ. ഓൗട്ലൈൻ ഓൗട്ലൈൻ ഓൗട്ലൈൻ, steps, application ഓൗട്ലൈൻ ഓൗട്ലൈൻ ഓൗട്ലൈൻ. Technical terms English-ഓൗട്ലൈൻ ഓൗട്ലൈൻ.

Summarize thermodynamic processes. 1 Understanding Interpret enthalpy changes accompanying

Summarize thermodynamic processes. 1 Understanding Interpret enthalpy changes accompanying is an official topic in Module 2 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Summarize thermodynamic processes. 1 Understanding Interpret enthalpy changes accompanying using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, summarize thermodynamic processes. 1 understanding interpret enthalpy changes accompanying should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What Summarize thermodynamic processes. 1 Understanding Interpret enthalpy changes accompanying means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2- ΔH Summarize thermodynamic processes. 1 Understanding Interpret enthalpy changes accompanying ΔH definition/meaning ΔH . ΔH ΔH ΔH , steps, application ΔH ΔH ΔH . Technical terms English- ΔH ΔH ΔH .

2 Understanding chemical reactions. Interpret Hess's law of constant heat Applying

2 Understanding chemical reactions. Interpret Hess's law of constant heat Applying is an official topic in Module 2 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding chemical reactions. Interpret Hess's law of constant heat Applying using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding chemical reactions. interpret hess's law of constant heat applying should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 2 Understanding chemical reactions. Interpret Hess's law of constant heat Applying means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2-ഘട്ടം 2 Understanding chemical reactions. Interpret Hess's law of constant heat Applying ഹെസ്സ് നിയമം definition/meaning ഹെസ്സ് നിയമം. ഹെസ്സ് നിയമം ഘട്ടങ്ങൾ, steps, application ഹെസ്സ് നിയമം ഉപയോഗം. Technical terms English-ഘട്ടം ഹെസ്സ് നിയമം.

4 summation. Identify the limitations of first law of

4 summation. Identify the limitations of first law of is an official topic in Module 2 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 4 summation. Identify the limitations of first law of using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 4 summation. identify the limitations of first law of should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 4 summation. Identify the limitations of first law of means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 2-4 summation. Identify the limitations of first law of thermodynamics. definition/meaning. Steps, application. Technical terms English-Malayalam.

1 Understanding thermodynamics.

1 Understanding thermodynamics. is an official topic in Module 2 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 1 Understanding thermodynamics. using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 1 understanding thermodynamics. should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

thermodynamics.

M2.01 Outline P-V-T behavior of pure fluids 2

Understanding

M2.02 Summarize thermodynamic processes. 1

Understanding

Interpret enthalpy changes accompanying M2.03 2

Understanding

chemical reactions. M2.04 4

Interpret Hess's law of constant heat

Applying

M2.04 summation. 4

Identify the limitations of first law of

M2.05 1

Understanding

thermodynamics. M2.06 4

Interpret second law of thermodynamics.

Applying

M2.07 Interpret third law of thermodynamics. 1

Understanding

Series Test – I 1

Contents:

P–V–T behavior of pure fluids.

Module study routine: Read the source wording, make a one-page concept map, practise one short answer and one structured answer, then review the Malayalam support notes.

MODULE 3

thermodynamic properties of fluids.

This module is presented from the official syllabus scope for Chemical Engineering.
Use the topic cards for learning and the source transcript for exact coverage.

As specified
official hours

CO-linked
see outcomes

Learning goals

- Explain the official Module 3 scope and its relationship to the course outcomes.
- Recognise the terminology, sequence, components and evidence expected in examination answers.
- Connect at least one official topic to a practical, industrial, laboratory or design context.

Key facts

- Official module title: thermodynamic properties of fluids.
- Official duration: As specified
- Official topic entries captured: 4
- The full source excerpt is preserved below for coverage checking.

2 Understanding thermodynamics

2 Understanding thermodynamics is an official topic in Module 3 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify 2 Understanding thermodynamics using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

Engineering or professional relevance

In Polytechnic practice, 2 understanding thermodynamics should be discussed with attention to safe operation, correct terminology, observable evidence and the relationship between input, process and result.

Topic study guide

Aspect	What to prepare
Definition/identity	What 2 Understanding thermodynamics means in the official course context
Study lens	Principle → components or stages → result → application
Exam evidence	Definition, labelled explanation, comparison, procedure or example as appropriate

Exam tip: Begin with the exact term, then give an organised explanation with a diagram, table, procedure or example whenever the topic naturally supports it.

Common mistakes: Writing a memorised phrase without explaining the principle; omitting units, labels, conditions or sequence; or mixing this topic with a related but different term.

Malayalam support: Module 3-2 Understanding thermodynamics

താപഗതികശാസ്ത്രം എന്നതിന്റെ definition/meaning എന്താണ്. താപം, താപനില, താപശേഷി, steps, application എന്നിവയെക്കുറിച്ച് വിശദീകരിക്കുക. Technical terms English-ൽ എഴുതുക.

Outline refrigeration cycles and systems

Outline refrigeration cycles and systems is an official topic in Module 3 of Chemical Engineering. Study the terminology first, then connect the stated purpose, sequence, components or application to the wider course outcome.

Concept and explanation

To learn this topic effectively, identify what the system, process, material, method or concept is; state its governing idea; describe the important parts or stages; and explain what changes when operating conditions change. The official source wording is retained in the module transcript so that examination answers remain aligned with the syllabus.

Study points

- Define or identify Outline refrigeration cycles and systems using standard technical terminology.
- Arrange the important components, steps or characteristics in a logical sequence.
- Relate the topic to one laboratory, industrial, professional or design situation where appropriate.
- Use a labelled sketch, comparison table, formula or procedure when the question requires it.

ACTIVE RECALL

Module-wise questions and answers

These are practice questions based on official topic coverage, not official examination questions.

Module 1

Define or explain Summarize the scope of thermodynamics. 2 Understanding Summarize the properties of a thermodynamic. (3 marks)

Answer: Begin with the standard definition or identity of *Summarize the scope of thermodynamics. 2 Understanding Summarize the properties of a thermodynamic*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

Define or explain 1 Understanding system.. (3 marks)

Answer: Begin with the standard definition or identity of *1 Understanding system..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

Define or explain Analyse state of a system and phase rule. (3 marks)

Answer: Begin with the standard definition or identity of *Analyse state of a system and phase rule.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

Define or explain Interpret Zeroth law of thermodynamics. (3 marks)

Answer: Begin with the standard definition or identity of *Interpret Zeroth law of thermodynamics.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□□ □□□□□□.

Module 2

Define or explain Outline P-V-T behavior of pure fluids. (3 marks)

Answer: Begin with the standard definition or identity of *Outline P-V-T behavior of pure fluids*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Summarize thermodynamic processes. 1 Understanding Interpret enthalpy changes accompanying. (3 marks)

Answer: Begin with the standard definition or identity of *Summarize thermodynamic processes. 1 Understanding Interpret enthalpy changes accompanying*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 2 Understanding chemical reactions. Interpret Hess's law of constant heat Applying. (3 marks)

Answer: Begin with the standard definition or identity of *2 Understanding chemical reactions. Interpret Hess's law of constant heat Applying*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain 4 summation. Identify the limitations of first law of. (3 marks)

Answer: Begin with the standard definition or identity of *4 summation*. Identify the limitations of first law of. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Module 3

Define or explain 2 Understanding thermodynamics. (3 marks)

Answer: Begin with the standard definition or identity of *2 Understanding thermodynamics*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Outline refrigeration cycles and systems. (3 marks)

Answer: Begin with the standard definition or identity of *Outline refrigeration cycles and systems*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Outline air standard cycles.. (3 marks)

Answer: Begin with the standard definition or identity of *Outline air standard cycles..*. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Summarize thermodynamic properties of fluids 3

Understanding Applications of the laws of thermodynamics -Principle of fluid flow - Nozzles - Mach number - Throttling. Refrigeration - COP - Carnot cycle - Vapour compression cycle - Criterion for selection of refrigerants Steam power plant - Rankine cycle - Internal Combustion engines - Otto cycle - Diesel cycle. Thermodynamic properties of fluids - reference properties, energy properties, derived properties - Definition of Helmholtz free energy - Gibbs free energy - Definition of Fugacity - Chemical potential.. (3 marks)

Answer: Begin with the standard definition or identity of *Summarize thermodynamic properties of fluids 3 Understanding Applications of the laws of thermodynamics - Principle of fluid flow - Nozzles - Mach number - Throttling. Refrigeration - COP - Carnot cycle - Vapour compression cycle - Criterion for selection of refrigerants Steam power plant - Rankine cycle - Internal Combustion engines - Otto cycle - Diesel cycle. Thermodynamic properties of fluids - reference properties, energy properties, derived properties - Definition of Helmholtz free energy - Gibbs free energy - Definition of Fugacity - Chemical potential..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Module 4

Define or explain Outline chemical reaction engineering. (3 marks)

Answer: Begin with the standard definition or identity of *Outline chemical reaction engineering.* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Summarize the concept of rate of a reaction.. (3 marks)

Answer: Begin with the standard definition or identity of *Summarize the concept of rate of a reaction..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Outline the type of reactors.. (3 marks)

Answer: Begin with the standard definition or identity of *Outline the type of reactors..* State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□ □□□□□□.

Define or explain Outline space time and space velocity 1 Understanding Overview of chemical reaction engineering Definition of reaction rate - variables affecting rate of reaction - Speed of chemical reaction - Rate equation - State Single and multiple reactions with examples - State elementary and non elementary reactions with examples - State molecularity and order of reaction - State Rate constant & Conversion - State Zero order reaction & First order reaction. Reactors - Principle, diagram and applications - Batch reactor - PFR - MFR Space time - Space velocity. Text / Reference T/R Book Title/Author T1 Chemical Engineering thermodynamic; K V Narayan. R1 Chemical reaction engineering; Octave Levenspiel. Introduction to Engineering Thermodynamics; J.M. Smith, Hendrick Van Ness, R2 Michael M. Abbott. R3 Chemical Engineering Thermodynamics; S. Sundaram. R4 Chemical Reaction Engineering; K. A. Gavhane Online Resources Sl.No Website Link 1 <https://nptel.ac.in/courses/103/101/103101004/>. (3 marks)

Answer: Begin with the standard definition or identity of *Outline space time and space velocity 1 Understanding Overview of chemical reaction engineering Definition of reaction rate - variables affecting rate of reaction - Speed of chemical reaction - Rate*

equation – State Single and multiple reactions with examples – State elementary and non elementary reactions with examples – State molecularity and order of reaction – State Rate constant & Conversion – State Zero order reaction & First order reaction. Reactors – Principle, diagram and applications - Batch reactor – PFR – MFR Space time – Space velocity. Text / Reference T/R Book Title/Author T1 Chemical Engineering thermodynamic; K V Narayan. R1 Chemical reaction engineering; Octave Levenspiel. Introduction to Engineering Thermodynamics; J.M. Smith, Hendrick Van Ness, R2 Michael M. Abbott. R3 Chemical Engineering Thermodynamics; S. Sundaram. R4 Chemical Reaction Engineering; K. A. Gavhane Online Resources Sl.No Website Link 1 <https://nptel.ac.in/courses/103/101/103101004/>. State the governing principle, list the key components or stages, and close with one relevant application or observation. Use the exact official terminology preserved in the module transcript.

Malayalam support: □ □□□□□□□□□ □□□□□ definition, □□□□□□ principle/steps, □□□□□□ application □□□□ □□□□□□□□□ □□□□□□.

PRACTICE ONLY

Practice Model Paper — Not an Official Examination Paper

Attempt one short definition, one structured explanation and one long answer from every module. Use the official assessment pattern reproduced above when selecting time and marks.

Module 1

1-mark definition: State the meaning of **Summarize the scope of thermodynamics.**

2 Understanding Summarize the properties of a thermodynamic.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 2

1-mark definition: State the meaning of **Outline P-V-T behavior of pure fluids.**

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 3

1-mark definition: State the meaning of **2 Understanding thermodynamics**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

Module 4

1-mark definition: State the meaning of **Outline chemical reaction engineering**.

3-mark explanation: Explain one principle, process or comparison from this module.

7-mark answer: Write a structured answer using a labelled diagram, table, procedure, example or application.

QUICK REVISION

Exam checklist

Before writing

- Read the command word: define, explain, compare, draw, calculate, analyse or design.
- Use the exact course terminology from the source transcript.
- Plan labels, units, sequence and marks before writing.

Before submitting

- Check every module has been revised.
- Check diagrams, tables, formula symbols and units.

- Separate official syllabus information from personal elaboration.

REFERENCE VOCABULARY

Glossary

Study glossary

Term	Meaning in this lesson
Course Outcome	A capability the student should demonstrate after completing the course.
Module	An official syllabus unit with defined topics and hours.
CIE	Continuous Internal Evaluation.
ESE	End Semester Examination.
Source transcript	A preserved extract of the official syllabus used for coverage checking.
